LOCOMOTIVE FIREMEN'S MAGAZINE

VOL. XIII.

JANUARY, 1889.

No. 1.

* Editorial *

A MONTHLY MAGAZINE devoted to the interests
of LOCOMOTIVE ENGINEMEN.

TERMS.—One Dollar per Year in Advance.

EUGENE V. DEBS, . . . *Editor and Manager.*

JANUARY, 1889.

THE YEAR 1889.

The *Magazine* welcomes right royally the New Year, 1889. We ring in the New Year joyously. If we could command the muses, the tuneful nine, they should combine their powers to do honor to the occasion, and Clio and Calliope should introduce the New Year to his reign with appropriate melodies.

The *Magazine* views the past with serene composure. It has no grievances to arbitrate. No croakings over "what might have been." It is youthful, aspiring, stalwart, and confident. It is trustful. It is the organ of a great Brotherhood in whose vocabulary there is no such word as fail. Words which are the signs of such ideas as "decline," "decay," "wane," "disappear," and the like are not in the lexicons of the Order. There is nothing in the years the *Magazine* has seen to make it despondent, and the year we now introduce, inspires it with new hopes and new ambitions.

It must not be surmised, however, that we are unmindful of the fact that success means work. We do not forget the lessons we have learned in the school of experience. The New Year comes with no new fangled panaceas for the ills of mortals. Stupefying opiates are not known in its *Materia Medica*.

There is work to be done, new lessons to be learned, battles to be won, victories to be achieved or defeats to be chronicled. The lethargic, the drowsy, dull and sleepy will not keep up with the procession. They will be ditched, or side-tracked, and the same will be true of the croaker, kicker and disgruntled. The New Year will be fruitful of opportunities to do and to dare. They will come to all—no man will be overlooked. The watchful, the alert, the self-reliant, the courageous will win, advance, secure the trophies, the shekels, the rewards. The supine will call it luck, "good luck" in the case of the successful, and "bad luck" in the case of the defeated.

Say what we will, the advance of civilization has not thus far eliminated degrading superstitions from men's minds, but are still the evidences of degrading bondage, and among them is the belief in luck, lucky days, etc., a belief in good and bad omens, in signs and wonders, waiting for something favorable to "turn up." The victims of such hallucinations are to be classed with the world's unfortunates. They disqualify men from reasoning and unfit them from forming legitimate conclusions. They constitute what the world calls cranks. They go off half-cocked. They have faith in soothsayers and fortune tellers. It would be an easy task to enumerate the vagaries which in the past have degraded men and women, and to point out the influences they still exert in human affairs, notwithstanding our boasted enlightenment.

The New Year will afford those unfortunate people who think Friday an unlucky day, and that it ought forever to be hang-

man's day, and indulge in other pagan whimsicalities, an opportunity to relieve themselves of their misfortune, to emancipate themselves from all sorts of superstitions. The *Magazine* will do what it can to aid any of its readers to gain that sort of a victory. The *ignis fatuus* school of philosophy ought to have long since disappeared. The screech owl omen and the hobgoblin terror ought to be things of the past, and it is to be lamented that in this age of "light and knowledge," in this high noon of science, this age of investigation and exploration, Egyptian delusions and Hottentot superstitions should be displaced by spiritual brass band tournaments, and that men and women should accept as oracular knee-knocking and toe-snapping communications from the dead.

Such things are destined to make the New Year, 1889, blush crimson. And yet, he will have to witness the humiliations, but not, we imagine, to any great extent, among the ranks of Brotherhood firemen. Their duties are eminently practical. The pick and the scoop are not the wands of the conjurer. There is no juggling with the fire-box, no magic monkeying with the machine. The thousands of Brotherhood firemen who will be promoted during 1889, will not be found in the ranks of the men who trust to luck, but rather because they worked for the prize, because when duty called they were on time, because they were studious and steady, because they set a proper value on time and were ready to make the most of opportunities. And such men the New Year will decorate with approval, with victor badges, prouder testimonials of triumph than were ever worn by Olympic champion.

Poets write of the years as "remorseless," as "iron-hearted," as "tomb builders," as conquerors who "muse" with satisfaction upon the "wreck and ruin" which mark their march. Much of this sort of arrangement should be understood in a Pickwickian sense. If it be true there is no appeal. But, the fact is, such charges are highly fanciful. There is precious little lyrical logic in the world. Poets are ideal rather than real. There is every reason for believing that 1889, like his illustrious predecessors, will build tombs, but it is to be hoped in the name of

justice, that he will not be held responsible for building the ostentatious abodes of dust and corruption, which, throughout Christendom, as well as pagan lands, are such exhibitions of vanity and vulgarity as are well calculated to make angels weep.

We do not care to challenge the allegation that the years are tomb-builders and grave-diggers, but so far, they have not been too industrious in that line. Except in the domain of savagery, population is largely in excess of the demand, and the new year, like a hundred of his immediate predecessors, will witness a contest between genius and generation, the former producing labor-saving machines, and the latter producing labor-demanding men. The new year will hear genius extolled for its meliorating work, while generation will be as highly commended for its success in multiplying men. This steady increase of machines and men will doubtless demand the only remedy the year can apply and that is to arrest in some measure, the increase of population by building tombs and digging graves. In that way the new year will doubtless hush the moanings of many a poor wanderer, hungry, cold and shelterless, and out of work, or, if work was found, wages were insufficient to keep soul and body in comfortable union. For this policy the new year may be denounced as "remorseless" and "iron-hearted," but when the "leaves of the judgment book unfold," it will doubtless be found that of all the blessings that the year could bestow upon such victims of "man's inhumanity to man," not one could be compared with the peaceful rest of the grave.

We beg the reader's pardon. We are not in a lugubrious mood. The *Magazine* starts out on its voyage of 1889 with fair winds and tides and every sail set. We know our good ship, our crew and our fellow voyagers. We know the seas in which we are to sail

"From lands of snow to lands of sun,"

and we are ready to exclaim :

"O, happy ship,
To rise and dip,
With the blue crystals at your lip,
O, happy crew,
My heart with you
Sails, and sails, and sings anew."

Do we write as if there were to be no storms? No, no, but rather that we are prepared for the tempest and the billow. We

record no vain boastings. But we know our ship from keel to quarter-deck. We know she is freighted with cherished hopes and high ambitions and that she goes forth followed by the prayers of 20,000 Brotherhood men. We know the destined port and all the snug harbors where we shall be welcome if repairs are needed. We know there are reefs, and shoals, and hidden rocks, and treacherous currents, but our charts are reliable, and fears are not our counsellors.

We welcome the new year for the splendid opportunities it will afford the Brotherhood to expand, to grow in knowledge, influence and numbers, and to display the vitality of its principles and achieve victories in the interest of men who imperil their lives for a livelihood. We welcome the new year because it will afford the *Magazine*, as the months come and go, opportunities to make a record of devotion to the cause of right and justice which will remain, when 1889, like 1888, has closed his accounts and departed to join the procession of centuries gone. We welcome the new year because it will put to the crucial test the devotion of Brotherhood firemen to obligations, and with a faith, which is "the evidence of things not seen," we know that though the penalty of fealty to duty be the lion's den or the heated furnace, a mighty host of them will never wear the badge of apostasy.

All hail, comrades! And to you and to all your loved ones at home, we send in no formal manner, but glowing with fraternal friendship, the greeting—A Happy New Year to all.

THE PROGRESS OF FEDERATION.

This *Magazine* make no apology for advocating with such ability as it can command, the policy of federation. We have no wish to disguise or dwarf any of the obstacles in the way of progress and of ultimate triumph. We are not disheartened because here and there some subsidized organ declares in opposition to the movement. Such things are to be expected. There is not a movement on record designed to liberalize the mind, to crush the wrong, to enthrone, dignify and glorify the right, that has not

been required to fight for every inch of advancement. Viewing matters from such a standpoint, we arrive at the conclusion that opposition helps on a good cause. It invites discussion. It keeps alive agitation. It sets men to thinking. It brings the truth to the front. The danger lies in listlessness, not in alertness. The demand for labor organizations is conceded. The strength of unity is not doubted. Federation carries organization to its extreme limit of usefulness. The Brotherhood of Locomotive Firemen is unanimous in favor of Federation. At the Atlanta Convention it placed itself on record. Circumstances enabled it to be the first labor organization to make the declaration. For this, the Brotherhood takes only so much credit as attaches to doing its duty fearlessly. It had the courage of conviction. It would emancipate labor from degrading conditions. It is not shackled by aristocratic exclusiveness. It believes that an "honest man is the noblest work of God," that

"His words are bonds, his oaths are oracles;
His love sincere, his thoughts immaculate;
His tears, pure messengers sent from his heart;
His heart as far from fraud as heaven from earth."

Believing such things, the B. of L. F. is in a situation to federate with other labor organizations engaged in the railway service. And here, let it be said, if honest men are to be found anywhere it will be among the membership of organized labor. This is not panegyric, not fulsome eulogy. It is simple truth, known and read of all men who are not blinded by bigotry. The B. of L. F., in advocating federation, does not stop to inquire the amount of pay a man receives, or whether he handles switch, brake, punch, throttle or scoop, but rather, is he an honorable member of an honorable organization, struggling against adverse surroundings to secure honest pay for honest work that he may have the necessities of life and some of its luxuries, and that he may live as becomes an American citizen; clothe, educate and train his children to act well their part in a God-favored land, where the government is of, for and by the people. Laboring men know that they are denied such wages and hence they organize that if possible they may improve their condition. Federation

of labor organization contemplates aid, mutual assistance in such an honorable endeavor.

The idea of federation is not modern, but its application to organizations of working men, engaged in the railway service, is of recent date. What progress has been made? We reply that it is eminently creditable and encouraging. Immediately following the action of the B. of L. F. at Atlanta, the Switchmen's Mutual Aid Association, unanimously declared for federation. Switchmen are courageous men. A coward can't be a switchman. Only clear-headed, steady-nerved and keen-eyed men can be switchmen. Their vocation is perilous in the extreme, and of all the orders of men engaged in the railway service, not one has given more attention to the rights and wrongs of railroad employ  s. Here, then, we have two organizations in line at the earliest practicable period. In October, when the great Brotherhood of Railroad Brakemen assembled in Convention at Columbus, the question of federation was up for debate. This Brotherhood, coming third, had ample opportunity to investigate the subject. It had as large interests at stake as any other Brotherhood engaged in the railway service. The Delegates to the Convention were competent men. They knew what they wanted, and they decided unanimously to federate with the firemen and the switchmen. As a result, we find that in two months, three Brotherhoods of railway employ  s, decide to federate. We regard the record as eminently satisfactory. And now comes the Brotherhood of Locomotive Engineers. At the annual Convention of the Order held in Richmond, Va., in November, the engineers decided not to federate. The reason for this action, or rather non-action, we shall not attempt to explain except upon a hypothesis warranted by circumstances.

We do the engineers no injustice by saying that up to the time of the C., B. & Q. strike, they regarded their Brotherhood invincible, and not in a condition to need the assistance of any other labor organization. The C., B. & Q. strike, in its inception, was an affair of the engineers. It is a well-known fact that the firemen on

the C., B. & Q. could have run the engines which the engineers abandoned. They were competent. The officers of the road recognized the fact. But in this supreme moment, the firemen made the cause of the engineers their own, and sacrificed everything to a spirit of loyalty, of federation.

Nor was this all of their service to the engineers. That Brotherhood, by its previous course, had engendered many animosities in the minds of Knights of Labor, the justice of such hostility we are not required to discuss, we simply state the fact, but the firemen discarded all such considerations and placed themselves between the engineers and those who sought to antagonize their interests. In attempting to explain the hostility of other organizations towards the B. of L. E., it may be said, we think, that it grew out of the policy of exclusiveness which had characterized it. It had been wanting in sympathy for all other labor organizations when in trouble. Towards the B. of L. F. this spirit of exclusiveness had been decided to the last degree of endurance, but the firemen on the C., B. & Q. did not enact the role of neutrality, they promptly took sides. They resolved to share the fate of the engineers. Now what of all this! It is told in a few words. The engineers refuse to federate with the switchmen and brakemen, but declare in favor of co  peration with the firemen. Towards all other Brotherhoods in the railway service, a "strict neutrality is to be maintained." What is neutrality? Is it not a total disregard of the rights and the wrongs involved in any controversy? Is it not a mental and moral condition, in which all the finer perceptions of right and justice are blunted or kept in abeyance, not permitted to act? It simply amounts to this, that no matter what grievance a switchman or brakeman may have—no matter to what extent their rights may be outraged, no matter how flagrant may be the wrongs to which they are subjected, the engineers propose to maintain a "strict neutrality," strict indifference, totally regardless whether the right or wrong triumphs. But with the firemen, the engineers propose to "co  perate." To co  perate involves the idea of co  ordinate, co  qual, of the same rank. But the B. of L.

E. declares that a member of the B. of L. F., who is a member of the B. of L. E., shall not represent his Division in a Convention of the B. of L. E. In such a case, what becomes of the coëqual, the coördinate idea? Is it not exploded? Does it not vanish?

Notwithstanding such considerations, it may be said that the B. of L. E. is making some progress toward federation. Three years ago, the B. of L. F., at its Convention, held in Philadelphia, passed the following resolutions:

Resolved, That it is the sense of this body that we do all in our power to create and maintain a harmonious feeling between the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen.

Resolved, That we place ourselves on record with the Brotherhood of Locomotive Engineers and that the Secretary of the Grand Lodge be authorized and directed to make a statement to the said organization, under seal of the Grand Lodge, to the effect that our order is now a labor organization, made such by the action of this Convention, and that we are desirous of coöperating with them in all their grievances, and that we shall expect the same from them in our troubles; knowing the fact that in union there is strength we are ready to meet them half way.

Resolved, That these resolutions be presented to the Annual Convention of the Brotherhood of Locomotive Engineers, at New Orleans, October 21, by a committee of one, who shall endeavor to bring about a proper recognition of this body, in order that we may be enabled to carry out the purposes of these resolutions by a friendly understanding during times of trouble.

A delegate was commissioned to present the foregoing resolutions to the B. of L. E., in Convention assembled, in the city of New Orleans. The resolutions were presented to the Grand Chief of the Brotherhood, P. M. Arthur, who stated to the delegate that "the B. of L. E. never had and never would coöperate with any other labor organization; that it was amply able to take care of itself, and that other organizations must do the same." That the Convention was heartily in sympathy with Grand Chief Arthur, is evident from the fact that no action was taken upon the resolutions passed by the B. of L. F. and presented by its appointed delegate to the Convention of the B. of L. E. That the resolutions were treated with the utmost indifference, it is only necessary to state that at the New Orleans Convention was enacted the law that no member of

the B. of L. F. should be eligible to membership in the B. of L. E.

This was three years ago. Then the B. of L. F. wanted to coöperate with the B. of L. E. and were ignored. Its resolutions were treated as trivial, unimportant, and evidently excited neither concern nor attention. Now we are informed that the B. of L. E. is willing to coöperate, and we predict that when another period of three years has elapsed, the B. of L. E. will be willing to federate. We recognize the fact that great bodies move slowly, and we congratulate the B. of L. E. that it is willing now to coöperate. We leave it to the conquering logic of events and of progress.

It is safe to say that every engineer on the C., B. & Q. was, and is, in favor of federation. These men understood the situation, they were in a position to appreciate the unwavering loyalty of firemen, and had the entire membership of the B. of L. E. been similarly situated, there would have been no difficulty about federation in the Richmond Convention.

In conclusion, let it be said that the firemen, the brakemen and the switchmen have determined to federate, form an alliance, offensive and defensive, for the general welfare. These Brotherhoods are students of the signs of the times. They understand their mission. They are conservatively progressive. If there are those whose pretentiousness, vanity or conceit keeps them to themselves—out of the broad current of human sympathy—their cynical views and practices will not deflect the firemen, brakemen and switchmen from federating, and as for final results there is neither doubt nor fear.

.....
The *Railway Service Gazette*, remarks that "there is no fear that the Brotherhood of Locomotive Engineers, or any other organization of railway men, will ever be able to obtain for the class represented larger salaries than they earn. But it is a fact that these organizations in their encouragement of morality, sobriety, devotion to duty and loyalty to employers' interests, have been of inestimable value to the railway companies and the public." The fear is they will not be able to secure fair salaries unless they federate.

THE LOGIC OF LAW.

The proposition is not to be controverted, that as a right, any labor organization may enact for its government, such laws as it may deem proper. It may be exclusive and illiberal. Its policy may be narrow and uncharitable to any extent it may consider advisable, and for such laws, policy and purposes it may hold that outsiders have nothing to do or say. A case in point is the legislation of the Brotherhood of Locomotive Engineers. It is perhaps the most conspicuous on record. It points a moral, though it may not be regarded as an adornment. The B. of L. E. regarded it as wise to enact as follows:

FIRST. No member of the B. of L. E. who belongs to the Brotherhood of Locomotive Firemen (B. of L. F.) shall represent his Division in an annual convention of the Brotherhood of Locomotive Engineers (B. of L. E.)

SECOND. No member of the Brotherhood of Locomotive Firemen (B. of L. F.) shall be eligible to membership in the Brotherhood of Locomotive Engineers (B. of L. E.)

We do not pretend to give the exact phraseology of the laws, but the spirit of them is presented with unquestioned fidelity.

The reader will doubtless desire information relative to the history of the legislation that embellishes the records of the B. of L. E. In the first place, prior to 1884, an engineer belonging to the B. of L. F. could represent his Division in the conventions of the B. of L. E. At the San Francisco Convention of the B. of L. E., held in 1884, the law was enacted by which engineers belonging to the B. of L. F. were made ineligible for such an honor. From that date the B. of L. E. decided that it would neither co-operate nor federate in convention with an engineer who held membership in the B. of L. F.

It has always been difficult to properly characterize such legislation. To say that it was humiliating is to use a mild term. It placed an estimate upon engineers who belonged to the B. of L. F., of extraordinary crushing weight. Why, it may be asked, should engineers who belonged to the B. of L. F. be excluded from the conventions of the B. of L. E.? What stigma had the B. of

L. F. placed upon its members that rendered them unfit associates of engineers who were not members of the B. of L. F.? Acquainted as we are with the character of the members of the B. of L. F., we are totally incapable of assigning a prudent reason for such ostracism.

The San Francisco Convention of the B. of L. E., having exiled every engineer from the councils of the future conventions of the Brotherhood, it became an easy matter to impose a still further humiliation upon the B. of L. F., and as a consequence, at the New Orleans Convention of the B. of L. E., it was enacted that no member of the B. of L. F. should be eligible to membership in the B. of L. E. That was the climax. The exclusion was complete. The members of the B. of L. F. were effectually banished—tabooed. First, no engineer, a member of the B. of L. F., no matter how capable, no matter what might be his wealth of integrity and usefulness, could represent his Division in a convention of the B. of L. E., and second, to make the line of separation as vivid as lightning, no member of the B. of L. F. could ever hope to enter the charmed circle of the B. of L. E. Preliminary to such a step, the member of the B. of L. F. must renounce his parent Brotherhood, repudiate and disclaim it, apostasize, turn renegade, and having done this, he might hope to be initiated into the B. of L. E.

We would do the B. of L. E. no injustice, but locomotive firemen, members of the B. of L. F., have a right, nay more, it is a binding duty imposed upon them, to analyze such legislation as the B. of L. E. has enacted in which their interests and honor are involved, for the purpose, if possible, of ascertaining the motive which impelled such legislation. Necessarily, we are compelled to deal in conjecture, since the B. of L. E. has not made public the influences which guided its action. Manifestly, the B. of L. E. did not take into consideration the wishes of the B. of L. F. It did not stop to inquire in the spirit of coöperation or fraternity, whether the B. of L. F. would feel honored or humiliated, indeed, it may be inferred that the only question mooted, so far as the B. of L. F. was concerned, was how to shake it off effectually, disconnect it, break the

last links in the chain that seemingly bound them together. Taking all the facts into consideration, it is eminently just to conjecture that the B. of L. E. had determined, if possible, to formulate a programme which would finally result in the withdrawal from the B. of L. F. every member who had advanced to the position of an engineer, but in this, failure has attended the effort, and we predict, in that line, still more signal miscarriages will be recorded.

The Brotherhood of Locomotive Firemen have from the first regarded such legislation as we have commented upon as unjust and mortifying. Locomotive Firemen, members of the Brotherhood, have for years with singleness of purpose, worthy of the highest commendation, sought to win the respect of all honorable men. In the face of many difficulties the Order has advanced in numbers and influence. It has sought to cultivate fraternal relations with all the Orders of workmen, and particularly those engaged in the railway service. Its record is luminous with integrity and of deeds that invite criticism. It has graduated from its ranks thousands of engineers of whom it is proud, and yet the Brotherhood of Locomotive Engineers is the only Order that has by its laws sought to cast a shadow upon its good name.

The Brotherhood of Locomotive Firemen, realizing the reproach cast upon it, and upon its members, by the laws enacted by the B. of L. E., has protested in dignified emphasis. But the laws still remain in force. At the late Richmond Convention, the Grand Officers of the B. of L. F. were present in the interest of their Order. The report was current, and believed to be well founded, that the obnoxious laws to which we have referred, would be repealed. Circumstances of a peculiar character helped to confirm the belief. The Brotherhood of Locomotive Firemen, in a lofty spirit of self-abnegation, had championed the cause of the engineers. Firemen had placed themselves in the van of the heroic army that fought for justice and the right. It was believed that the spirit of brotherhood was never so strong, so resistless. Hope was something more than "a taper's gleaming light." It was a beam of comfort. It aroused pleasing expectations. The sacrifices endured by firemen on the C.,

B. & Q. made their faith in the professions of the engineers, the evidence of things hoped for, but when the gavel fell for the last time, disappointment, the very dregs of failure and chagrin, were offered, and the B. of L. F. was compelled to drink them. Professions, promises, expectations, were "dead sea fruits that tempt the eye but turn to ashes on the lips." The obnoxious laws remain on the statute books of the B. of L. E. and in effect and in fact comes the query from Richmond to the B. of L. F., "What are you going to do about it?"

It is well-known that Grand Chief P. M. Arthur has repeatedly admitted the great injustice of the laws upon which we have commented, and that he has pledged himself for their repeal. It has not been done. The laws are still in force, a menace and an insult; and we have a right to conclude they will remain in full force.

The action of the B. of L. E. is of a character that does not require a trained diplomat to comprehend. It is to exclude members of the B. of L. F. from the organization. There is no dodging the issue. We are permitted to look it square in the face. Locomotive firemen may now contemplate the situation at their leisure. We are not in the habit of using the language of the bravado but the B. of L. F. being forced into this controversy against its protests, will now seek by such honorable means as it can command, to protect its interests and its good name.

This *Magazine* appeals to the membership of the B. of L. F., and invites each one to take cognizance of the situation. There is nothing left us but to take an inventory of our resources, courage, manliness, self-respect, of all things worth cherishing, and from this time henceforth, man their good ship and sail it without reference to the B. of L. E. That organization does not intend to repeal its obnoxious laws which place an insufferable stigma upon the B. of L. F. and further effort on our part to correct the wrong would be degradation and abasement without a parallel.

HELENA, MONT., has just discovered a new gold mine in one of her streets, and wants her name changed to New Jerusalem.

FEDERATION.

The *Locomotive Firemen's Magazine* has in the past advocated the federation of locomotive engineers, locomotive firemen, railroad brakemen and switchmen, nor have we been disinclined to include railroad conductors. We have discussed the subject entirely free from passion. We have assumed throughout in the discussion of wages, the improvement of the condition of workingmen, that society at large, as certainly as the individual workingman, would derive large benefits by the enthronement of a policy which would insure to workingmen, fair, honest, living wages.

This *Magazine*, while it is the recognized organ of a great brotherhood, and on all occasions champions the interests of the Brotherhood of Locomotive Firemen, has done what it could to arrest the growth of the pernicious idea, that there is an aristocracy in labor—the India-pagan idea of caste, than which nothing could be introduced into the discussion of topics designed for the welfare of the workingmen of the country, more detrimental to their well being.

Let us say just here and now, that the aristocratic, the caste idea is not only repugnant to American institutions, but is rebuked by God Himself. The apostle Peter, and a braver man never drew a sword or offered up a prayer, declared that he had learned that "God is no respecter of persons"—and our own immortal Declaration of Independence, declares, that "all men are created equal." It were blind, impudent folly, after quoting such authorities, to favor aristocracy, or caste in society, and it is an insult of colossal proportions for one wage worker to assume a haughty, disdainful and overbearing air towards another wage-worker, because, forsooth, his pay is more remunerative. In pursuing such a course, he does what God Almighty never did, since He created Adam, and he does that which the genius of American institutions condemns.

In the discussion of federation of railroad brotherhoods we dismiss sentiment, though we fully recognize a sentimental side to the subject. We favor federation because we believe it capable of producing beneficial results, financially. If this is admitted, if

this is true, other benefits relating to moral, social and educational conditions, are certain to follow.

Those who favor federation are, we conceive, in duty bound to state their reasons for the position they have taken. To win, their reasons must be cogent and convincing. They must be free from sophistry. Every proposition should be sharply stated. Conclusions should be based upon facts. In such discussions the tricks and arts of the demagogue should have neither place nor consideration. This done, men will be able to determine the course of action which ought to be pursued.

In the first place take the four orders of railroad employes, engineers, firemen, brakemen and switchmen. They are especially identified in running railroad trains, they are absolute necessities. Without them trains could not move. In the very nature of things, as employes, these men must co-operate, they are inter-dependent, the one cannot operate without the other. In their employment for one to assume any superiority over the other is sheer nonsense. There can be no rivalry. These different classes of railroad employes organized brotherhoods. Why? It may be said in reply, to improve their condition, morally and socially. But this is not all, the fundamental, bed-rock fact, in forming the organizations was the bettering of conditions *financially*. Wages was the supreme question. There is not an organization of workingmen in the country which was not prompted by the belief that it would be the means, directly and indirectly, immediately and remotely, of advancing wages, or at any rate, preventing a decline in wages.

It is scarcely required to say in this connection, that labor creates the wealth of nations. Workingmen after many years of education grasped the fact, and the conclusion followed that they were not receiving their equitable share of this wealth. They saw distinctly that their environments were such as were calculated to keep them forever in a condition of subjection, to prevent their advancement—to blast their hopes and defeat their aspirations. They created the wealth and remained poor. They tilled all the fields and harvested all the crops, but

were hungry. They manufactured all the clothing, the hats and the shoes, but had to be content with scanty raiment. They built all the houses for the people and the barns for the cattle and were compelled to inhabit shelters unfit for human beings. Their country conferred upon them sovereignty and they had the ballot, but the laws were so framed that their rights and interests were ignored. In a word, labor was degraded.

Under such circumstances, workingmen concluded to organize themselves into unions and brotherhoods. Nothing could be more natural. The causes were numerous, of long standing, deep-rooted and powerful. They created a necessity for organization—compact, determined and persevering organization. It is only needed to look around to comprehend to what extent labor has organized during the last twenty-five years. Almost every trade that can be named has an organization, and the purpose of which primarily is, to secure fair and honest wages.

We are not unmindful of the fact that many of these organizations have what are termed benevolent features, that the sick and afflicted are cared for, and that certain pecuniary benefits accrue to relatives in case of death, but at the bottom of this benevolent policy lies the question of wages—fair pay for fair work. With this question settled all others are easily managed. With fair wages we have the bright and cheerful home, good food, good clothes, books and papers and refinement such as should adorn the American home.

It will be admitted, we think without controversy, that organization has accomplished vast good for the American workingman. It has taught him his power in the body politic, social, and commercial. He has found that organization educates and elevates, that it gives power and consequence, and exerts an influence which statesmen recognize as potent. But the workingmen have learned that while they have been organized for bettering their condition by advancing and maintaining wages, the employers have been busy in devising ways and means whereby they might hope to

maintain their ascendancy, nor have they been disappointed.

We readily comprehend how that in this connection we could devote some space to the discussion of certain facts upon which employers rely for ultimate success in defeating labor organizations—chiefly, that what is termed the "labor market," is over supplied with men, and that if one man quits work, no matter what the cause may be, two men stand ready to take the place at the wages offered. It is this fact that brings into the boldest possible prominence the benefits of federation—the inauguration of an alliance between organizations whose members are identified with carrying forward an industrial enterprise, in which each one is absolutely necessary to the other.

And here, coming down to business, we take for an illustration a railroad. Necessarily, it employs engineers, firemen, switchmen and brakemen. In case of a grievance on the part of one class of these employes, the road might be slightly embarrassed by a strike, but if the other three classes remain loyal to the corporation, the places of those who had quit work could be readily supplied, and things would move forward without serious embarrassment. In this case it is readily seen that the purpose of organization would be defeated. This sort of a victory has often been achieved by railroad corporations. It matters not how serious and exasperating may have been the grievances of the employes, the more indefensible the wrongs, the greater the triumph of the corporation, and emboldened by success, it gives other employes to understand that the same fate awaits them for any similar assertion of manly independence.

What is the logic of such a case as we have cited? It is this, that the corporation is stronger than any one organization of its employes, and can defeat it in any contest without regard to justice, or the rights of the employes. This has been done in the past, and will be done in the future more frequently if occasion requires, because corporations are combining for defense. Quick to comprehend situations, watchful of the signs of the times, they see the day of battle approaching. American workingmen, at

least the more intelligent and progressive of them, have determined to enjoy their rightful share of the wealth they create. They have organized for the struggle. In the contests that have taken place, organized labor, though "baffled oft," has compelled corporations to show their hand. Their purposes, strategy and policy, are understood and the knowledge gained is not, like the talent we read about, to be hid away in a napkin. With railroad employes it is to be used for their benefit. It may be that the corporation can defeat one or even two labor organizations, but it will find it difficult to strike down three or four when federated to secure justice and acting as a unit. Organized labor has accomplished much—how much can never be told. It has been an educating force of transcendent power. It has brought into play the mind forces of millions which before were dormant. It has aroused energies and ambitions, in consonance with American rights and privileges, that cannot be lulled to repose. The maxim, that "in union there is strength," trite but true, has been clothed with new significance. Organization has prepared the way for federation. Organization is federation's *avant courier*. It is as one crying in the wilderness of doubt, in the wake of defeat, prepare the way for federation and the triumph of labor.

Are there those who doubt? Probably. Are there those who hesitate? Certainly. When, we ask, in the history of the world's advancement was there ever a movement made to emancipate men from oppression, that there were not men who doubted and hesitated? When was there an army organized that did not have its cowards. Where in the world's history has truth confronted error that there was not to be found a Judas Iscariot to betray with a kiss for a consideration? Men who take counsel of their fears stand still or recede. It is not required to particularize. History supplies multiplied instances. Workingmen who organize are courageous. Men who stand by their colors in the storm of battle, in the hours of darkness, men whom defeat cannot dishearten, clear-visioned, clear-headed and trustful, are now, as in the past, the hope of the world. Workingmen see dis-

tinctly that final triumph is to be secured by federation.

Locomotive firemen, railroad brakemen and switchmen have declared for federation. These organizations are pledged to an alliance that coöperation, however liberally construed, does not create. Federation is a compact, a treaty. It has a significance, a power and influence that coöperation does not and cannot possess.

It is not our purpose at this writing to discuss fine distinctions in the meaning of words. That may come later. Our chief purpose now is to say that this *Magazine* is unalterably committed to the federation of the organizations of railroad employes, engaged in moving trains. As we have said three of these organizations have voted in favor of federation, and they *will* federate.

The important preliminary steps have been taken. There are no insuperable obstacles in the way, and final results are no longer matters of discouragement or special anxiety. The question may be asked, will other organizations come into line under the federation banner? We might answer by asking, why not? What have they to gain by remaining isolated? The men who federate are the peers of those who may decline to fly the federation banner—their equals in moral excellence, in mental grasp, in the comprehension of the problems to be solved, in manly independence and in all things that go to make up good citizenship, and since trains cannot move without their assistance, the necessity of discussing any phase of the subject which does not directly relate to the settlement of such grievances as are common to railroad employes does not appear.

In closing this article we desire to say that we have undiminished faith in the conquering power of education. It levels up, and it levels down. Aristocratic ignorance and superstitions are certain to disappear. The brotherhood idea is sweeping along with resistless power, and the time is not distant, as we read the signs of the times, when the throttle, the pick, the brake and the switch, arrayed in artistic style will symbolize the federation of the men who wield them, not only in their own interests but for the interests of society, and we do not hesi-

tate to believe that the festive punch sooner or later will have its allotted place on the shield of the federated brotherhoods.

THE KNIGHTS OF LABOR.

For a number of years past the organization known as the Knights of Labor, has been conspicuously before the country. Its rapid growth, its vast membership, its commanding influence in the industrial affairs of the country constituted the Order an arbiter in matters of supreme importance to its members and their employers.

The membership at one time approximated a million. All men contemplated its colossal proportions with amazement, some with alarm. Its membership was composed of men and women, white and black, learned and ignorant, skilled and unskilled, working people. It aimed high. Its purposes were the amelioration of the condition of the working people of the country. It started out with the motto, that "an injury to one was the concern of all." It was organized to *strike*. It believed in the *boycott*. It is not surprising that grievances were numerous. They existed in every department of labor. Wrongs, more or less flagrant, were brought to the attention of the assemblies of the order. The course of procedure was sharply defined by law. Assemblies were clothed with extraordinary powers—designed, ostensibly, to correct abuses and improve the condition of the membership. If employers were stubborn a strike was ordered, and a boycott inaugurated.

The order is modern—and it is American. It sounded a key-note. It recognized certain great fundamental facts—the independence and the sovereignty of the American citizen. It grasped the vital idea that, if American wage workers were prosperous and content, the welfare of society was secure. If, on the contrary, the people, whose moral, intellectual, social and physical well being depended upon their wages, were underpaid, poverty and degradation would inevitably result, and that social disorder would follow with unerring certainty.

There is not a statesman, a political economist or a philanthropist on the continent, worthy of the name, who will controvert such propositions. They are self-evident,

they have the force of axioms—and yet, society as a whole, antagonizes the Knights of Labor. Not only Knights of Labor but every other organization of workingmen, whose purpose it is to better their condition pecuniarily.

If working people are content to accept such wages as are offered, and out of their scanty revenues provide assistance for the sick, bury the dead and pay widows and orphans a few hundred dollars, when husbands and fathers are beneath the sod, society applauds. But the instant these wagemen complain of low wages, of poverty, of inability to provide the comforts and necessities of life for themselves and those dependent upon them, millionaires, monopolists, members of syndicates and trusts, bankers, speculators, food cornerers and brokers, the entire brood of those who receive tribute from labor, set up the cry that workingmen constitute a dangerous element, the press is subsidized, the untold blessings which labor confers upon society are ignored and there are wild denunciations of labor organizations.

During the convention of the Knights of Labor in Indianapolis in November, some startling facts were made public, facts which all well wishers of this great organization must deplore. In the first place it was shown that the membership had astonishingly decreased—that at least five hundred thousand members had withdrawn. It was shown that there were internal dissensions, and worse still, that the order was virtually bankrupt—that its liabilities exceeded its revenues, and that financially, the order had reached the point of danger. To the superficial observer the conclusion is natural, that under such circumstances the organization had ended its mission, and nothing was left but to die as gracefully and as philosophically as circumstances would permit. We prefer to look upon a less gloomy side of such pictures. In the first place an organization with 300,000 loyal members ought not to be financially embarrassed, nor can it be for any extended period, provided a policy of wise economy prevails. The danger that confronts the Knights of Labor is not finance, but faction. The moment faction is eliminated harmony is enthroned,

and with harmony comes health and strength. Faction may reduce membership, but it cannot destroy principle. That there was a necessity for the order of Knights of Labor is not to be questioned. That it has made mistakes need not be asserted nor denied. That its mission is ended we do not believe. Its birth was not premature. Its phenomenal growth is convincing proof that the best interests of society demand its appearance. That it has waned is not a mystery. The reason why is easily understood, and the remedy is within reach. The head of the order, Grand Master Workman Powderly, has discovered the causes of decline, and in his address, points them out with such vividness that retrieval need not be delayed. That the Knights of Labor are sailing in dangerous seas just now, is patent to the most superficial observer. Mr. Powderly said in his address, that the deliberations and final conclusions of the late convention would seal the fate of the order; rescue it from death, or give to it new vitality. Most devoutly do we wish the order freedom from every entanglement that has reduced its membership, impeded its progress and threatened its dissolution. But whatever may be the fate of the Knights of Labor it will not arrest the determination of the wage workers of America to improve their condition.

"For Freedom's battle, oft begun,
Bequeath'd from bleeding sire to son,
Tho' baffled oft, is ever won."

In the Indianapolis Convention, the fact was discovered that the Knights have an abundance of funds, and the prompt offer of financial assistance indicated a strong faith in the future of the organization. We are not disposed to criticise *pro et con*, the amazing features of the meeting. It is enough to say that the organization remains intact, with Powderly at its head, and that we wish it the largest possible measure of prosperity.

The decree for the emancipation of labor has gone forth. It will not be modified nor revoked. Workingmen, like other men, will learn wisdom in the school of experience. If there are those who oppose and condemn labor organizations, and surmise that the disintegration of the Knights of

Labor or any other union or brotherhood of workingmen means the triumph of those who antagonize such unions, they are doomed to disappointment. A Waterloo may have sealed the fate of Napoleon, but not of France. A Bull's Run did not decide the fate of the Union. Revolutions may be arrested in their march but they do not move backward. The world may deprecate strikes, but they will come in some form until the cause for strikes is removed.—

Go, wing your flight from pole to pole,
Nor cease till all the zones are seen
That belt the earth, where oceans roll ;—
Where hills and vales are decked in green ;—
Find all the lands beneath the sun,
Where mountains rise and rivers run ;
Where man for man has tolled and died ;
Where tyrants have been defied ;—
Then tell me where the men are free,
Who have not struck for LIBERTY.

A GIGANTIC RAILROAD TRUST.

During the month of November last a scheme was set on foot to form a gigantic railroad trust, and the matter was discussed secretly in the council chambers of the roads interested in the scheme. Late in November this trust, or pool, or federation, was to be called the Western Railroad Clearing House, and that its territory was to be bounded by a line drawn through Chicago and Milwaukee on the east, St. Paul and Minneapolis on the north, Colorado, New Mexico and Wyoming on the west and Arkansas on the south. All the existing freight and passenger associations within the territory named are to be abolished and merged in the new Clearing House. There is to be an executive board of three, which shall devote its entire attention to the affairs of the Clearing House and be intrusted with all matters connected therewith. One of the three is to be elected Chairman of the Clearing House, and the other two are to be known as Vice Chairman of the Freight Department and Vice Chairman of the Passenger Department respectively. The Chairman, it is understood, is to be J. W. Midgley, who under the terms of the agreement would be a greater man than Commissioner Fink, virtually having full control of the management, so far as traffic affairs are con-

cerned, of all the roads between Chicago and the Rocky Mountains. The roads affected and the mileage of each are as follows:

Road.	Mileage.
Atchison, Topeka & Santa Fe	8,000
Burlington & Missouri River	2,753
Burlington, Cedar Rapids & Northern	1,046
Chicago, Burlington & Quincy	2,063
Chicago, Burlington & Northern	442
Chicago, Rock Island & Pacific	4,000
Chicago & North-western	4,383
Chicago, Milwaukee & St. Paul	5,669
Chicago, St. Paul & Kansas City	800
Chicago, St. Paul, Minneapolis & Omaha	1,354
Colorado Midland	221
Central Iowa	636
Chicago & Alton	1,000
Denver & Rio Grande	1,474
Denver, Texas & Fort Worth	800
Fremont, Elkhorn & Missouri Valley	1,351
Illinois Central	2,600
Minneapolis & St. Louis	600
Missouri Pacific system	6,000
Northern Pacific (part of)	1,000
St. Louis & San Francisco	1,457
Union Pacific	6,392
Wisconsin Central	700
Wabash (part of)	956
Southern Pacific (part of)	1,200
Total principal systems	65,997

The difficulty which confronted the officials was to perfect the pool or trust so as not to come in conflict with the Inter-State Commission law, and this we believe has been accomplished. The scheme includes the following proposed regulations:

Managers—The said rates, rules and regulations shall be established by a Board of Managers consisting of one accredited representative from each company member of the Clearing House. They shall meet monthly, or oftener if required.

Arbitration—In case the members fail to agree upon any question brought before the Clearing House, it shall be referred to an Executive Board consisting of three men, two at least of whom shall be experienced in traffic matters. Such Board, shall on the organization of the Clearing House, be elected by unanimous vote. But they (or either of them) may be removed by a two-thirds vote of the members. They shall deter-

mine every disputed traffic question concerning any two or more members, and shall hear and decide all cases of complaint, their decision to be subject to revision at the discretion of the Executive Board, but not to appeal. Before they act, opportunity shall be given members concerned to be heard, after which decision shall be rendered within ten days.

Rate-making Power—The authority to make rates, rules or regulations to apply on traffic, subject to the Clearing House, carried by either road party thereto, or to change or depart from the same when established, shall be taken from the offices of the several railroads, as such, and be vested absolutely in the Clearing House.

Division of Through Rates—The divisions of all through rates on business included in the agreement shall be arranged through the Clearing House, the intention being that the bidding for business by means of private concessions shall cease and that the divisions and corresponding traffic, under similar circumstances as to receipt and delivery, shall be alike via all lines.

Single Responsibility on Each Road—One officer of each road, party to the Clearing House, shall be held responsible for the strict maintenance by his company of all rates and rules established by the Clearing House, and he shall not be at liberty to depart therefrom unless by authority of the Executive Board.

No Concessions to Influence Business—No voucher or other form of concession which would reduce the established or influence the routine of the business, subject to the Clearing House, shall be paid or allowed unless authority therefor shall be given by the Board of Managers or the Executive Board.

It is stated that the moment the scheme is perfected and goes into operation freights will advance from 25 to 35 cents, and continue to advance until the officials of the road are satisfied. Such a scheme perfected at once destroys all competition. To all intents and purposes the roads are a unit. Rates of freight and travel will go the highest that can be secured and will remain at that point regardless of complaints. It is asserted that Mr. Jay Gould is highly favorable to the scheme, as he wants firm and paying rates.

WHY WE QUARREL.

WHY do we quarrel, she and I,
You ask. 'Tis easy answering this.
We quarrel so that, by and by,
We may make up, forgive and kiss.

We meet, alas! and careless pass,
As if on each we never smiled;
We quarrel so that we may know
The bliss of being reconciled.

ESSAYS

Written for the Firemen's Magazine:

CAB COGITATIONS.

"Laugh and grow fat," if not elegant, is an old time aphorism, which, if subjected to analytical investigation, would, I am persuaded, disclose a surprising amount of genuine philosophy. I do not suppose that there was ever an intention of making the maxim, metaphorically, a corner stone of a school of philosophy in which laughter should be taught as a science, or be followed as a profession. I am inclined to the opinion that the author of the apothegm was one of those kindly-natured men who was ambitious of doing something or of saying something that would add indefinitely to the sum total of human felicity, hence he said, "Laugh and grow fat," which, to say the least, is wiser and better than to frown and grow lean, emaciated, cadaverous, wrinkled and wretched.

I do not write for the purpose of intimating that I know more about maxims than other people, but maxims are said to be the wisdom of the world boiled down and handed down from generation to generation in the most convenient form for every day use of common sense people, as well as by those who receive diplomas from universities by study or by the liberal use of money.

I think the declaration will be accepted as true, that life is sought to be made unnecessarily gloomy by certain classes of people. It is not required that I should name them. They are everlastingly finding fault. They are suspicious and jealous. They cultivate asperities. They make homes gloomy. There is no music in them any more than there is in a horse-fiddle or a buzz-saw. Their words sting. They don't "laugh and grow fat." There is no sunshine in their souls; miserable themselves, they make others unhappy. They ignore such things as are calculated to administer comfort, joy and gladness to the human mind and body. "But," says one, "there is a time for all things," as if at certain times certain specified things were proper or in order. There is doubtless time for all things. There is a time for joy and gladness, despondency and elation, work and play, charity and cheerfulness, love and devotion; for music and manliness, for courage and constancy, for noble examples, for faith and hope, a time to laugh and a time to weep. There is time—not a time—for lying, for stealing, for envy, malice and crime, for making homes dark and dreary, for making wives sad and disheartened, for squandering money, and

for concocting schemes, the fruits of which are worse than dead sea fruit. But the time taken for such things is stolen and murdered.

Perhaps some one remarks "All the world's a stage," and declare the play—tragedy, comedy or farce—must proceed; that it were folly to moralize; that it is far more rational to take things as we find them; that it is useless to be hypercritical; that it is far better to have the drama proceed, enter into the spirit, and, by the operations of mind forces, extract the grain from the chaff; garner the wheat and let the chaff go whithersoever it may.

I do not object to chaff. It has its uses. Indeed, if there were no chaff there would be no wheat, no bread. There is a time for comicalities, for whimsicalities and for trivialities. Call them chaff if you please. They make people "laugh and grow fat." They help the world to be jolly and good natured. I conclude that there is much in this world that is lightly esteemed but which is very valuable. I conjecture that it is the part of wisdom and in consonance with the mental equilibrium, when formulating opinions, to take cognizance of what appears to many as of light importance. The person who goes through the world discarding and disregarding little things, can scarcely be rated a philosopher. The lily is a little thing, yet "Solomon in all his glory was not arrayed" like the little flower, and in the proverbial philosophy of the wise king, the sluggard was referred to the ant for an example of industry.

I have referred to maxims as the quintessence of wisdom, condensed propositions embodying practical truths which have to be sought after, and which, when found, are of great value, and yet when found, are all too often cast aside. It is a proverbial fact that "all is not gold that glitters," still, half the world accepts the counterpart and displays brass for gold and paste for diamonds, and with the thoughtless crowd persons so adorned pass for more than they are worth. The maxim stands for all classes of pretenders whose religion and integrity bear about the same relation to the genuine article that pinch-back does to gold.

It is said that "a simple fact is worth a whole shipload of argument," and it often occurs that a shipload of argument does not contain a single fact; but this does not seem to interfere with those who are masters of "words of learned length and thundering sound." Maxims being axioms about which there can be no mistake, the conclusion is rational that if men of common sense would study them and have them ready, as cow boys have their pistols, when wanted, they would find them beneficial. But such is not the case. For instance, the maxim that "an idle brain is the devil's workshop"

might spur many a poor fellow to find a job. And how many thousand of random talkers would be better off if they could have been taught that "it is better to confine your tongue, lest it confine you," and when gathering in a harvest of remorse he learns too late that "as you sow, so shall you reap."

How few and how grand are the men now-a-days, who act upon the maxim that "a good name is rather to be chosen than great riches." It is notorious that with a large number of men great riches are rather to be chosen than a good name, and as a consequence a good name is associated with great riches in the exception and not the rule. It is said that "pride goeth before destruction, and a haughty spirit before a fall," and though the world is full of examples demonstrating the truth of the proverb, thousands of proud, haughty men and women are bending on the fatal course towards the Niagara of their destiny. It is accepted as true that "a bad workman quarrels with his tools." Such a workman represents the entire brood of egotists, men bloated with self-importance, who are unable to discover defects in themselves and charge their misadventures to others, to fate or luck, and never to the real cause. It will be admitted that "a good word is as soon said as an ill one," and yet many persons forgetful of the fact will persist in choosing ill words though they are fruitful only of bitterness.

It may be that maxims are regarded by many as trivialities, of small importance, scarcely worth remembering, but to those who can comprehend their meaning, and love wisdom for its saving and elevating power, a maxim has a value in the presence of which even gold loses its attractions. As for instance: "A little leak will sink a great ship." "Better to be alone than in bad company." "Birds of a feather flock together." "Brag is a good dog, but Holdfast is better." "Depend not on fortune, but conduct." "Diligence is the mistress of success." "Doing nothing is doing ill." "Empty vessels make the most noise." "Every man is the architect of his own fortune." "Experience teaches fools." "Hell is paved with good intentions." "He that lies down with the dogs must expect to rise with fleas." "Hope is a good breakfast but a bad supper." "In a calm sea everybody is pilot." "Let not your tongue cut your throat." "Live not to eat, but eat to live." "Make not your sail too large for your ship." "Never fall out with your bread and butter." "Never tread on a sore toe." "One never loses by doing a good turn." "Search others for their virtues, thyself for faults." "Tell me the company you keep and I'll tell you what you are." "Valor that parleys is near yielding." "Small things increase by union." "Fear not while acting justly."

"Be what you seem to be." Thus I could write for hours of the treasures of wisdom handed down from generations gone, designed to act the part of chart, compass and light house to prevent wreck and ruin. Maxims are as free from superstition as fire is from malaria, and he who stores his mind and memory with the wisdom they contain may hope, in safety, to sail his bark o'er tempestuous seas and reach the destined port. He will be no cynic, no follower of Diogenes. He will have no sympathy with anchorites. He will love his fellow man and will be in full sympathy with the true and the beautiful.

L. M. Opeccue.

NEW YEAR REFLECTIONS.

MARSHALL, TEXAS, December, 1888.

MR. EDITOR:—"Look not mournfully into the past" is the advice given by one of the serenest and sweetest of poets, for "it comes not back again." In plain, every-day phraseology, the idea is that it doesn't pay to fret about things done and gone. And yet, if we never took account of what is past we should miss a great many delightful memories, as well as not a few practice and valuable lessons. Matters have been luckily so ordered in this world that it is hardly possible to live through any twelve months without coming across more or less of pleasure, and without learning more or less that is wholesome to remember; otherwise existence would be unendurable, and men and nations would make no progress. It is well, of course, not to beat our breasts too violently over sorrows and mistakes that are beyond our power to assuage or correct; but at the same time it is equally well not to forget too easily, and not to think, as Hosea Bigelow quaintly puts it, that "the bottom's out o' the univarse 'cause our own gill-pot leaks."

The beginning of a new year—and the years are in the main very much alike—can hardly fail to show that this planet of ours is on the whole a rather desirable abiding-place. Not many of us are willing, with all our snarling and grumbling, to sever our connection with it until we are compelled to do so, and those who do now and then shuffle off the mortal coil on their own motion and by violent means are called foolish and crazy.

The year just closed was not specially different from the ones that preceded it. If we could have a fair average of its joys and pains, its benefits and disasters, the showing would undoubtedly be very much the same as that of all the others we have known. There is always just about so much room for laughter, so much call for tears; and there is just about the same measure of opportunities to learn as we go along. It is not likely any of us managed to do exactly right every day during 1888. That was not

expected of us. If we succeeded in being faithful and correct one-half of the time, we did pretty well, considering our temptations and our lack of discretion and the power of moral resistance. We all did things for which we were sorry—and which we would do again, perhaps, under like circumstances. On the other hand, it is safe to say, the most careless of us did a few things to be glad over—and we are likely to repeat them on similar occasions in 1889. This is human nature. There were emergencies in which we failed, without sufficient excuse and to our discredit, as there were contingencies in which we behaved ourselves after a fashion that was upright and praiseworthy. The experience in both directions should have taught us something. Having made certain blunders, and seen the folly and mischief of them, we should know how to avoid them in the future; and having done certain creditable things, and seen the happy effects of them, we should know how to seek out a larger share of them hereafter.

We shall find it safest, however, not to make too many good resolutions. It is very easy to promise ourselves more than we can conveniently keep in mind. The habit of marking out a definite and comprehensive line of conduct for a whole year has its drawbacks. That must be an exceedingly robust and persevering sort of virtue which dares agree with itself to choose the wise and prudent part, even in a few respects, for so long a time as 365 consecutive days. The reformatory glow that comes over us at the beginning of the year has a touch of self-deception in it, and it is best to be on our guard against that. A man should not trust himself too far, any more than he would his neighbor, since one may as easily prove false in that way as in the matter of breaking pledges made to another. Good resolutions count for something, to be sure, even when they are strictly carried out; but it is a great deal better to make a few and observe them closely than to make so many that the conscience cannot carry them without fatigue and discomfort. The true philosophy of life, after all, is to do things by the day rather than by the year. Those duties which lie nearest are the ones best worth regarding, and in the same sense, the happiness that lies nearest is the kind that is best worth grasping. We spend altogether too much in reaching after what is remote and difficult, simply because it is remote and difficult, when the essence of what we seek lies plainly in our way if we would only stop and see it and pick it up. The philosopher who said that every day is a judgment day, was right to the extent that in each twenty-four hours we are called upon to make choice between the good and bad, the false and true, and upon these apparently casual decisions the whole scheme of reward and

punishment depends. If we let slip the little daily chances to do what is right and salutary, thinking to make it up by demonstrating our virtue in some particular coming test which we had planned for, the probability is that we shall either evade the particular test when at length we meet it, or find ourselves too weak for want of practice to cope with it in the triumphant and splendid way we have expected. And so, too, about waiting for supreme joys instead of seizing and making the most of the small ones that flit past us unappreciated and unobserved. The easiest way to be both good and happy is to view things at short distances. Thus, and thus only, can we make sure both of our opportunities and of our capacity to turn them to the most felicitous and profitable account.

Harry Keler.

FEDERATION.

An old and mutual friend (whose name I am permitted to send you) having kindly supplied me with recent copies of your journal, I have taken a sympathetic interest in your articles pertaining to the Burlington strike. I may state, too, that, though an outsider, I am privileged to have a pretty accurate knowledge of the situation which those articles so ably discuss. The remedy you suggest is federation of railroad employes. But, in my humble judgment, while federation would unquestionably be good as far as it could go, federation could not go far enough. Federation means a pooling of issues, a concentration of the forces of employed railroad labor against the employing railroad capital. So far, so good. It was by such tactics that the Prussians in the late Franco-Prussian war overcame the French, by attacking them in detail, a whole army being sent against a single army corps. The Burlington engineers were but one corps of the Burlington employes, the other divisions or corps being respectively the firemen, the brakemen and the switchmen, to say nothing of that somewhat isolated corps, the conductors. Together, all these formed the army of employes. The Burlington company, on the other hand, was but one corps of the great army of railroad employers. This corps of the latter could not well have stood against the united army of the former, bound together by federation. But, returning to the case of the Prussians and French, we know that the Prussians though massing their strength against the separated French detachments, did not win without great losses; and I cite this to show, while federation is superior to separation, it is not without its drawbacks. Suppose the Prussians had been able to put a limit to the number of soldiers which France could bring into the field, and we can see that the

final victory would have been much sooner accomplished, and with a great deal less loss. But the Prussians had not this power; they could not say to France, "You shall not bring against us 500,000 men, we will restrict you to 5,000." If France could have mustered only 5,000 for that war, she would not have fought at all, and the Prussians could have crossed the Rhine and imposed upon her any terms they chose. And they need not have federated their various army corps to do it. One corps would have sufficed.

Do you begin to see my point? It is this: The employed laborers' chief obstacle to securing just demands is, not the lack of federation among themselves, but the number of idle men who may be mustered against them, that is, who stand ready to obey the employer's demand to take their places.

What is the use of striking, or asking for fewer hours or higher pay when men are standing about whose necessities compel them to take your places at present hours and wages? There is no compulsion so great as want, and violence is ever growing less effectual as a remedy. While want exists, strikes must be but a close synonym for suicide.

Without idle labor to rally to its support, capital would be helpless against a strike, or threatened strike, of the employed, and would have to go out of business or grant just demands.

No man can oppress other men unless still other men of about equal number can be got to enforce his oppressions. This is as true of capitalists as of kings.

Again, the absence of power to oppress leaves oppression unthought of, or, at least, ineffectual.

"How oft the means to do ill-deeds
Makes ill-deeds done."

The Burlington management would not attempt to keep its employes on a lower level of compensation than prevailed among its rivals if idle labor in considerable quantity were not at hand to encourage it to such a course.

Available idle labor is the instrument, and the only instrument, by which capital can resist the just demands of employed labor, and continue in business. Idle labor, therefore, is employed labor's greatest enemy. Employed labor cannot hope to obtain full justice until this enemy is removed. The degree of justice which it shall ever obtain must continue to be proportionate to the degree in which this enemy is removed. Its removal to a large extent is a possibility within the power of the employed labor of the United States. The diminution of the amount of idle labor, which thus stands so formidably in our path, should engage our first efforts in the struggle for the attainment of justice for the employed. The question how to do it is one worthy the

serious consideration of your readers. And while they are thinking it over I will, for the present, leave it, with the intention of returning to it in your pages later on.

Nemo.

CHICAGO, ILL., November 2, 1888.

A FIREMAN'S DUTIES.

In looking back a few years and summing up the duties of a locomotive fireman, I find them to be not dissimilar to those which devolve upon other men, as citizens, members of society, husbands and fathers. A fireman has responsibilities in common with men of other professions and callings. Hence it may be said that a fireman's duty to his employer, to himself and to his fellow man lie along the same line that marks the duties of all men who are employers—fidelity to obligations, honorable ambitions and a high appreciation of what is due to others in all the walks of life.

Considering a fireman's chosen calling, the duty devolves upon him of shoveling coal and scouring braes and bright work on his engine. These duties, while laborious, are necessary and strictly in keeping with his obligations and should be regarded as the stepping stones to the ultimate mastery of the world's commercial monster, the locomotive engine, for upon his intelligence, character and skill depends the success of future railway service.

A fireman's duty to his employer demands that he should make himself master of his calling by acquiring a complete knowledge of the locomotive as a whole, and of each of its several parts. A fireman should observe in what way fuel can be economized and at the same time maintain perfect combustion, as imperfect combustion is always wasteful of fuel and detrimental to free steaming.

For the consideration of studious firemen I will ask two simple questions, as follows: What is fire? What is smoke? I imagine I hear a titter and see faces awry, as though such little matters were beneath the consideration of a man who is expected to master valve motions. But such is not the case, and one great mistake, made by many a young man, lies in setting their eyes upon the throttle, as the goal of their endeavor without exploring the minor paths which lead to a perfect knowledge of all the parts of a locomotive, and insures the successful manipulation of the same when their time comes for promotion, and invariably the man who despises such minor matters, such as mastering valve motion by the use of the valve lever, which is purely mechanical, makes a fatal mistake. The point is, make yourself master of all the parts which combine to make the modern locomotive, and which, like a man is heir to many ills, but which may be made strong and useful if he who runs may read and know the symptoms of

its disorders and by analysis, locate their cause—attain this point, and then if you are a sober, sensible, industrious man you are ready for promotion.

The answer to the question, what is a locomotive? as in the September issue of the *Magazine*, I do not like, as it is not sufficiently explicit and therefore fails in bringing out the chief characteristics of a locomotive. If that question was propounded to me I should answer as follows: A locomotive is two simple, indirect, high pressure engines combined, each being independent of the other. What more is necessary to an intelligent definition? However, if my observations are insufficient I am open to connection.

A fireman's duty to himself lies in the building of a good, pure, manly character, which can be done only by constant guarding against the growth of evil propensities with which mankind is woefully beset, and yet, there are very few so depraved by nature that nothing in the way of moral improvement can be accomplished, if we bend the whole energy of our being to the improvement of our moral condition.

Modesty is manliness, truth is gallantry, courage is godliness, and these things in alliance triumphantly overcome the evils of the baser world, and fit a man for good society, and stamp upon his brow the mark of dignity, which neither coal dust nor grime can hide; hence, as the fireman of to-day is in embryo, the engineer of the near future, let it be his object and aim to raise the standard of excellence of character and skill above its present level, for, mark the fact, you are living in a progressive age, "gilded," as Mark Twain would have it, but do your best to gild it deeper.

A fireman's duty to his fellow man is plain and easily performed—when he has done his duty by himself, and has won the friendship and esteem of those with whom he is daily associated and with a righteous purpose has signed his name to the Brotherhood roll, a serious task begins, and in fulfillment of his obligations, a fireman should note these prime necessities, as follows: Be present, be earnest, be honest in each meeting of your Lodge. The idea that to pay all moneys due your Lodge cancels your whole indebtedness to the Brotherhood, is wrong. God made man's eye to build the mind; the ear is but the vestibule for music. Go to your lodge then and learn by observation, by comparison of views, in analyzing all questions of interest to all concerned, and not wait upon the corner of the streets, or in some place of vulgar amusement, to hear what has been done by the attending members and then appear dissatisfied because your wishes are not met.

The Lodge room is the school room of the Brotherhood and every member should be

an interested student, and each one should strive to win the confidence of his employer, the respect of good society, and by knowing the import of the obligations assumed, he should lend the might of one man's energy to establish the strength and dignity of the Firemen's Brotherhood.

H. J. Fackenthall.

THE NEW YEAR.

God's blessings on the young New Year.
Now reigning on his throne of state.
Oh, may he prove more friendly here
Than eighteen hundred and eighty-eight.
The bells, in sounds almost divine,
Salute dear eighteen eighty-nine.
He's welcome, and we hope his reign
Shall be a grand one, free from pain.
May strife and discord sink from sight,
To regions of eternal night.
May health and happiness prevail!
'Mongst every man who runs the rail;
And may 'longside the track be strewn
With choicest flowers blown in June,
Until the perfumed atmosphere
In incense circles round our noses,
On every day throughout the year,
A perfect paradise of roses!

Old eighty-eight, the hoary thief!
When first he crept across Time's portals,
Soon changed our smiles, and plunged in grief
The hearts of many tolling mortals.
Courageously we stood our ground,
And very soon our foemen found
That engineers, and firemen, too,
Were not at all a craven crew,
But men who could their rights maintain,
Endowed with courage, brawn and brain.
Ah! well, let others sigh and sing,
My muse is out on joyous wing.
The jade is tipsy, bless her soul!
She's had her share of happy cheer;
She's ordered on another bowl,
To toast you all a glad new year!

Clasp hands around the festive board!
And dash the frowns from every brow!
On New Year's Day we can afford
Convivial greetings, while we vow
To keep our flag of Union high,
Amid the splendors of the sky,
And toast our friends—the true and good—
Who recognize our Brotherhood.
Once more fill up! (In Adam's brew
From crystal springs I'll join with you.)
Here's may a reign of love prevail
Amongst all orders of the rail!
And may the wheels of commerce roll
With good, remunerative toll;
And may the dividends increase,
And may the land be blest with peace,
May readers of the *Magazine*,
Glide down the stream of time serene,
And may the girls catch hand-ome boys,
To bless them with connubial joys.
Oh! may the Lord hear all the prayers
We toast with water as with wine,
And may the best of all past years,
Be eighteen hundred and eighty-nine.

—Shandy Maguire.

SOME one tauntingly requests the Master Mechanic of the C., B. & Q. to give reliable information relating to the engines on that scab system. The information, if given, would furnish data of the greatest interest to travellers and shippers. The number of engines sick, maimed and dead would read like a bulletin from Jacksonville in the height of the yellow fever epidemic.

Mechanical

MR. EDITOR:—The condensed history of "The Manufacture of Locomotives," with which the Mechanical Department of the December *Magazine* commences, gives us a rapid review of the various changes and improvements introduced since the first inception of locomotives, and also of the ever increasing weight and power of these "iron steeds," which are more fleet than the famed "Arabian," and whose "wind" is even more enduring than the grey-hounds. It almost seems as if the prophet Job might have had a vision of the "iron horse" in his time, for the description as given in the 39th chapter and 19th verse is applicable to a locomotive, for he says they are strong, and "clothed with thunder," "not afraid as a grasshopper," "the glory of whose nostrils is terrible," "he paweth in the valley," "he swalloweth the ground in his rage," and more figures of a like character, just as characteristic of our "iron horses," as of the horse of flesh. But the locomotive is the child of the nineteenth century, and the astonishing growth and development of this country, is due to the work done by these untiring monsters, which are ever ready to yield obedient service to their master at the slightest touch of his hand. As locomotives are but in their infancy as compared with the age of our globe, and with many of man's inventions, we dare hardly predict what the future has in store for mankind, for while our present locomotives differ so much from the first ones built, it is but reasonable to suppose that the locomotive of fifty years hence will surpass those of the present time in all respects, and cause our descendants to wonder how we, who pride ourselves with travelling "fast," could be contented to get along at "such gaits" or in "such a manner." In looking over Mr. Evans' article we find that "Improvement" has been the watchword and "Excelsior" the motto, and while some may be content to "let good enough alone," very many brains are at work, adding a little here and a little there to our common stock of knowledge, and thus helping each other (by communication) to bring our machines nearer perfection or make our methods of management more efficient and practical.

"Side Rod" comes to the point in a brief way, but it is evident that he knows whereof he writes, and has a reason to give for his belief.

Mr. Lockwood says "Not Two times Nothing" but "Four times Something," and in his lengthy article he finds "Something"

where "Nothing" was in the past, and then gives us "Four times" "that" but as he finally leads us to the "counterbalance," and its "centrifugal, tangential, hammering, swaying, gyrating, 'wee-wahing,' 'nosing around,' rocking, thrusting, rolling forces," and its bridge destroying effects, I shall not endeavor to follow his "train" of "state-ments," for they are not reasons.

"Outsider" has come inside after welcoming us for a year, and I heartily welcome him and hope he will find the company inside so congenial that he shall not want to be outside again. I hope that the merits of the department may be enhanced by the aid of "Outsider's" contributions, for I venture to say that even while "Outside" he was as able as many who were inside. I do believe with him that this is a good "market" to bring your ideas to and give and exchange them for others, as none of us are too wise to learn or profit by experience of our own or of others in the same avocation. I am pleased to find "Outsider" so well satisfied with my views in regard to running with a full throttle and a short cut-off, and the humanity and sympathy which I deem right, should be shown to the "boy who is trying to keep her hot," and that the problematical query I propounded gives him a chance to "clinch" the question. While I fully coincide with "Outsider" in the economy of using the higher steam pressure, and cutting off closer than could be done with the lower pressure, I also believe that some fuel will be saved, even if the engineer should regulate his speed, by what "Outsider" facetiously calls "the good old fashioned way with the throttle only," for he would have to close the throttle more with the higher pressure, and he would thus stop some of the steam from flowing into the cylinder and retain it in the boiler. I believe with the best management, (that of the short cut off and full throttle) the actual difference in fuel consumed is just about in the proportion which the steam pressures bear to each other, or at least 8 per cent., for I have often noted the difference while in charge of the scoop. Running with the highest possible pressure with the shortest possible cut-off, is a very apt illustration of the old proverb, "It is a poor rule that will not work both ways." In the first place we note that the fireman is benefited in his work, because he has less of it; in the next place the engineer will find that as it takes less water, he can maintain a more uniform pressure on the boiler and make better time; and lastly, the company ought to feel the effect of this judicious management in their coal pile, and through it, in their treasury. I heard not long ago, of an instance where an accurate account of the fuel consumed by two locomotives of the same build and doing the same work for a year,

developed the fact that one of the locomotives had been run in such a manner as to save several hundred dollars over and above the wages of the engineer, or say about \$2,000. If each locomotive in the country can be run at, say even one-half the above saving, or \$1,000, with the 30,000 locomotives in service, it would represent \$30,000,000, which, if added to the sometimes very meagre net income of the roads, would enable them to realize a fair return to the investors and pay good wages to the men whose faithful and intelligent service helped to make such a splendid result.

Mr. W. DeSanno gives us another interesting chapter on "Early Railroading," and traces some of the improvements made in the method of constructing the roadway and laying the tracks.

Next we note the reappearance of our old friend "Eccentric Strap," who comes to us with his "war paint on," ready to battle for the truth and right, I hope; and this hope is full realized when we see how "E. S." takes up the wheel and lever question, taking up the same line of argument by which I have before this endeavored to convince our opponent, that the center of the axle is the true fulcrum. I thought that "E. S." in one of his former communications had deserted us and gone into the camp of the enemy, but as is very evident he considers the center of the axle the fulcrum, and thus must fully endorse my ideas on the subject as again expressed on page 898 and 899 of the December *Magazine*. I will only add one more problem, which I have stated before, but which I will state once more in the hope that "A. D." or Mr. Lockwood will not ignore it but answer it.

Suppose a locomotive were built with a wheel just two feet in diameter and a two foot stroke, the center of the pin would then be at the periphery or tread of the wheel. When the pin is above the axle, according to "A. D." and Mr. Lockwood, the weight is at the axle and the fulcrum at the rail. A locomotive built on the above model would have power, when on the upper half revolution, but how would it be when the pin is down, and as in the above illustration, comes right to the spot where our friends will persist in locating the fulcrum? When the power and fulcrum are at the same point you cannot have any leverage, yet I dare say that our friends of the opposition will not try to tell us that a locomotive of this kind had no power, but on the contrary, I believe they will be forced to believe that she would pull a very heavy train, at a slow speed of course. Now I should like to know where she obtains her power, when, according to "A. D." and Mr. Lockwood, she has no leverage at all? When they answer this problem, and the one in regard to the calculations on the horse-power, it will be time

enough to write further on this subject, but I shall not have any more to say on it unless they bring a good show of reasons to the front to upset mine, which seem to me to be indisputable and beyond the need of a further prolonged controversy.

"Otto Hallbeck" now wishes to know what the original question was which has caused all of this discussion on the wheel and lever. For his information I will say that the question seems to be "Where is the fulcrum of a locomotive driver while in motion and touching the rail?"

"O. H." says the power of a locomotive depends on its adhesion to the rail, but if such were the case, what use would it be to increase the size of cylinders or the steam pressure? It is this which gives power in combination with the leverage, which is determined by the stroke both in locomotives and stationary engines. A locomotive may slip on the rail, or the driving belt of a stationary may be so loose as to slip and not impart motion, yet the locomotive and the engine are just as powerful as ever, and only need a firmer grip to show their power.

In regard to the figures on the horse-power, "O. H." will see that the article is reproduced in December *Magazine*, and that in this I have eliminated the error, which printers introduced, in making me say 3,300 instead of 33,000, as it was in MSS., but I stand corrected in regard to the horse-power, for I find that I made a miss in dividing 5,080,000 by 33,000, and thus gave the wrong result. Thank you, "O. H.," for the pains you took to go over the figures and find my error.

"O. H." seems to think that it will not matter much whether 120 or 130 pounds of steam were used, as in my problem, as given in October *Magazine*, and from the answer he gives it is to be presumed that he rather thinks that in the higher pressure trial the most steam is used. I would call his attention to the answer given by "Outsider," as well as my comments thereon, from which he may be able to draw some food for reflection. In regard to the strain on a boiler, I have ever entertained the idea that the aggregate strain was determined by the number of square inches of plate exposed to the steam-pressure and the amount of said pressure, and I think this with a fair show of reason, for steam presses equally in all directions at once, and a boiler suspended in mid air, would have to stand as much pressure downward as upward and sideways. Some contend that only the diameter, multiplied by the length and pressure need be taken into account, and thus seem to me to ignore the side pressure entirely. "O. H." can take his choice, as the matter seems to be open for debate.

In reply to "W. A. G." let me say that I was not aware I had said anything about

the "dead grate with brick," for I have, as I stated several times, had no experience whatever with brick arches in the firebox. I find that "W. A. G." also believes the higher pressure to be most economical, taking less water and fuel. *Vulcan.*

TEMPLE, TEXAS, December 7, 1888.

MR. EDITOR:—Mr. Lockwood comes again with a lot of illustrations, all of them excellent and quite illustrative, but his definitions and inferences are "dead wrong." His former statement was, "the bottom at rest, the top traveling twice as fast." He does not repudiate that statement now, but says, "not twice nothing, but four times something." What are we to infer from this? Is it that Mr. L. would now try to make us think that the top travels four times as fast as the object? Evidently not, as he still uses the old figures of fifty and one hundred in the same relative positions as before. Now, let us closely investigate these statements and see what virtue they possess. I think none at all, and to my mind Mr. L. has got himself tangled up in an inextricable muddle of figures which have gotten around him somewhat similar to a knot which the sailors tie. I believe it is called a bowline, the more you pull it the tighter it becomes. Mr. L. has just commenced to pull on his knot and he has got himself tied up rather badly; he can't retrench behind the figures he now gives, but instead has got himself into about the same fix as the man who dug a cellar and then tried to dig it enough larger to hold all the dirt that came out of it, the more he dug the more it would not hold the proceeds.

Let us reason a little on this subject and see where his figures will lead us. First, "the top traveling twice as fast as the bottom, and the bottom at rest, the top travels four times as fast as a point $\frac{1}{16}$ of an inch above the point of contact." We here have very contradictory statements and very contradictory motions of a solid wheel in rotation, for if the top travels twice as fast as the bottom, and at the same time travels four times as fast as a point $\frac{1}{16}$ of an inch above the bottom, then that point $\frac{1}{16}$ of an inch above the bottom must be traveling in a transverse motion at a rate of speed one half as great as the maximum speed attained by the top. Such a condition of affairs would break a wheel into so many pieces that all the Pinkerton detective force armed with search warrants, and an equal number of professors with horse shoe magnets could not collect the pieces in a month.

Now, let us look a little further. We will take Fig. 6. "This engine at the same time as Fig. 5, is on its forward dead center, at rest, reversing its motion from a downward fall to a backward thrust, moving in the center line by translation through axle and cylinder

fifty miles per hour, etc." Ah! now you come to it. You have there sounded the key note, for if your center line through axle and cylinder moves in translation fifty miles an hour, then that must be your basis for calculation, as the maximum speed is just twice that, instead of twice the bottom. I hope Mr. L. will investigate his own statements and if he will not concede the point of truth, at least try and explain the contradictory statements he has made.

We will indulge in a few figures, and figures won't lie: Take a take wheel four feet in diameter for eight inches, producing speed of translation by its speed of rotation on a surface; the top travels twice as fast as the center line through the axle, four times as fast as a point corresponding with the position of the crank pin on the bottom quarter, being a point half way between the center line and bottom, forty-eight times as fast as a point one inch above the bottom, and four thousand eight hundred (4,800) times as fast as a point $\frac{1}{16}$ of an inch above the bottom. How do I know? Why, because when an object moves from a given fixed point or stationary point, then the point farthest from that having no motion travels just as many times as fast as any intermediate point as that intermediate point is contained times in the total distance. The middle is one-half, is contained two times, the bottom quarter our times, etc.

Mr. L. says (page 893 December Magazine) "There are two points in a wheel that have translation without rotation; the center line through the axle and in plane with the center of cylinder, the point of the tire in contact with the rail." This I must emphatically repudiate. The first half is correct. The center line through axle has translation without rotation, as the entire wheel rotates around that center line. Any other point in the wheel not parallel thereto which has only the same motion of translation without rotation is inconceivable. The point in contact has both translation and rotation, but going in opposite directions, and thereby counteracting each other.

Several answers there are to "Vulcan's" question as to which would be the most economical over a given piece of road in a given time, a pressure of 100 pounds or of 130 pounds. "Side Rod" comes the nearest to it, as his answer, so far as it goes, is correct, but he leaves out a very important point, and that is that when steam is super-heated, thereby giving it a greater pressure, the water it contains is expanded in a corresponding degree, the consequence would be that water (let us take the prime factor) when expanded enough by heat to create a pressure of 130 pounds will fill a correspondingly greater area than at 100 pounds, as the ratio of 100 to 130 or 10:13. This is partially over-

come by the greater rapidity with which the higher pressure will rush into the cylinders during the short time the ports are open, but at least one-half of that proportion will be clear gain in that one respect alone; also as the speed is to be the same in both instances as your energy is as 13:10 you could thereby hook the engine up just that amount higher or use that much less throttle, by which you would save $\frac{1}{3}$ by the higher pressure. This, then, would show very near an equal saving in fuel, as it would necessarily require a correspondingly less quantity of fuel to evaporate the smaller quantity of water minus the difference caused by the higher pressure creating a stronger exhaust, thereby causing a stronger draft on the fire. This, however, in actual experience, will be found to not exceed one-half of the gain so received, hence the saving in fuel would represent something like $\frac{1}{4}$ with the higher pressure, full throttle and highest notch, (taking that as the pressure required to do the work in the given time.)

I can't understand W. A. G. in his statement (page 904 December *Magazine*) "I said dead grate with brick arch was a help, as it prevented clinkers or ashes gathering next to the flue sheet, allowing cold air to get through. Now, how is it that shortening grate surface by this method the steaming is not decreased?" As I just said I do not understand this at all, our brick arches here do not in any manner prevent ashes or clinkers from gathering next to the flue sheet any more than at any other point, and our grate surface is identically the same with or without the brick arch, consequently the question given by W. A. G. is a conundrum to me.

Now, to Mr. E. J. Rauch. I presume he is still a reader of the *Magazine*; if so, he will see this. I met Mr. J. McD. on his return from the Richmond convention, where he served his division as delegate, the same capacity in which he formerly served No. 115, B. of L. F., on several occasions, represented by myself this year. From him I learned that Mr. R. felt somewhat hurt at my article about the dissecting 8x8 to re-arrange as 5x13. Now, Mr. R., I will admit that my language on that topic was rather curt and somewhat harshly expressed, but it was not intentionally so. It was not meant in any manner as it was received, but I had just got in off of a trip of an extremely hard nature, "rawhiding" our ninety-four mile division with fifty loads, and doing local work all along, switching at every siding, and had been seventeen hours on the road. We got in about 2 P. M., and I know that I had to go out at 9:50 P. M. I hurried through my article and selected such words as came handiest to my pen, without stopping to weigh them as I ought. I noticed the sound of them when reading the *Magazine* containing the article. I cannot blame Mr. R.

for feeling hurt, and here is my hand on it. I am truly sorry I couched my answer in such terms as I did, and if Mr. R. will pardon me for this offense I shall try and weigh my words more carefully in the future. I had intended to write a personal letter to Mr. R. but as the offense was given here I concluded that this was the proper place to give an explanation.

"Vulcan" gives us a little more of horse power, and the way to determine it, a reproduction from the September *Magazine*, but I fear Bro. "V." must have been expecting the caller at the time he made that calculation, as his figures are not exactly correct. He says * * * "equals 5,080,000 foot lbs.; this divided by 33,000, the equivalent of one horse power, would give a result of about 184, as the result for one cylinder." I find by carefully going over this that it would yield only about 154, not quite that, but $\frac{1}{4}$ short of it, 153 $\frac{1}{4}$. Everybody is liable to make a mistake, and it is only necessary to show "V." his miscalculation once, as he is too well posted in figures and mathematics generally to hold out on such a question. As to the question of wheel leverage therein brought out, I have had my say, and still remain of the same opinion. I cannot see that "Vulcan" has satisfactorily explained the points I advanced. I used to be of the same opinion as himself but was convinced of the error and acknowledged it, and I am still convinced.

Now, something about extension fronts; we have them here on all engines. I would like to know first, what the proper name is for the draft plate in the front end. I always heard it called diaphragm plate, until I came here, but here it goes by the name of deflecting plate. Which is proper? Which way should the plate be moved, up or down, to increase draft? If the plate is adjusted centrally (can be moved up as much as down) and the engine burns too much coal, how should it be moved, up or down, to cause the engine to be lighter on fuel? I ask for information.

These extension fronts act queerly sometimes. I used to be supervising architect on an engine on the south end. The Baldwin Locomotive works contracted to build an ocean steamer, but at last changed the plan and only built a 17x24 mogul, but being in a very great rush they forgot to change the plan of her appetite; she would chew up all the coal you could give her and cry for more. The front end would fill up entirely full in thirty miles, with a train of forty-five loads; as long as the front was free and open my architectural designs were very meagre, nothing but a level plane, but when it began to get full all of Quixotic freaks of nature represented in mountain regions were reproduced in the fire-box. All I had to do was to clean the front and my mountain scenery would vanish in a couple of miles,

by careful firing, the same as if swept away by the leveling hand of Father Time. Somebody give me explanation of the above questions, as also the peculiar actions of the steamer mogul, and in return you will have the everlasting thanks of

Eccentric Strap.

EMPORIA, KAN., November 22, 1888.

MR. EDITOR.—According to Mr. W. De Sanno's description of early railroading if the firemen of those days had less fuel to pile on, they had several other extra duties to perform, that the firemen of to-day know nothing of. He says he never understood the single eccentric value motion on the "Bald Eagle" and other engines of those days. As the hook-up and other valve motions have been fully described lately in the *Magazine*, it may be interesting to some of your readers to have the single eccentric reversing gear explained: The front end of the eccentric rod was attached to the lower end of a rocker link, said rocker link being pivoted in the center. The end of the slide valve rod was attached to a block that was raised and lowered in the rocker link by the reversing lever; when the valve was in the backward motion. It was out of position to twice the amount of the lap and lead of the valve, being behind its proper movement to that extent, but there was less lap used for those valves than for the valves of the present day, consequently the valve was not so far from its proper position while backing as if such such gear was used on the present engines.

I am tempted to try and answer "Vulcan's" question, although I would prefer that it should be more definite. If the first trip with 120 pounds was accomplished under full stroke of valve, the second trip with 130 pounds would be the most economical; but if the steam was cut as early in the stroke as it could be with advantage on the first trip, there would be less gains with the higher pressure, but in either case the higher pressure would consume the least fuel and water; an example of the great economy of high pressure worked with good expansion, over low pressure. Allow me to quote the case of the Eider, a steamer of the Peninsular & Oriental Company. She had a pair of oscillating engines working under a pressure of seventeen or eighteen pounds. She was returned to Southampton after doing fifteen years service with orders to fit her up with compound engines working at seventy-five pounds pressure and to retain as much of the old machinery as possible. The old engine frame, crank shaft and connection was retained. With old engine it consumed twenty-two tons of coal daily, but with the new engines it only consumed eleven tons and also made one knot an hour faster times.

An Emporia Cripple.

MR. EDITOR:—Since "Vulcan," in the November *Magazine* directs a question towards, if not directly at me, I will give my views on the problem. Suppose the cylinder of the engine will contain two cubic feet of steam, and steam of 100 lbs. pressure per square inch will do the work, and that two cubic inches of water will fill the cylinder with steam of 100 lbs. pressure per square inch. Then, if we expand the two cubic inches of water into steam of, say, 150 lbs. pressure per square inch, by additional heat we can fill our cylinder one and a half times with the steam expanded down in the cylinder to 100 lbs. pressure per square inch, therefore, there will be a saving of one-third in the amount of water used.

Fearing that I might not have another opportunity to write before the December *Magazine* goes to press, I have made this reply without having had but a few minutes in which to consider the proposition, but I had always been led to believe that an increase of pressure means a saving of both water and fuel.

Not having had any experience with lubricators I can only answer "Fireman's" inquiry, about airing the valves, in the "Yankee" manner, namely, by asking another. Why would you wish to "air" the valves under the conditions you state? Referring to W. A. Gore's question, it is my opinion that no smoke is drawn into the steam-chest when running down grade "shut off" as started. The only way that I can see that the valve could be raised from its seat would be by compression at the end of the stroke caused by inside lap of the valve, and if the pressure was sufficient to raise the valve from its seat, it would certainly force its way out through the exhaust port rather than draw smoke in. In fact, it is not easy to see how the compression could raise the valve and draw smoke back under it at the same time. That there is a partial vacuum in the steam chest when running in the manner stated, no one, having a good working set of oil cups and pipes will deny, for there is always a good suction through the pipes, but the only way this can be accomplished is by forcing the air in the cylinder out through the exhaust opening, and this, in engines equipped with relief valves in steam chests, will produce a visible effect on the draft through the flues when the speed is high. To close with a question. What is momentum and what form of mechanical force does it represent?

A. H. Tucker.

Mr. J. R. Avery, of Louisville, Ky., has patented what is called the "International Car-Coupler," and from drawings, which we have examined, we conclude that Mr. Avery has solved a most perplexing problem, and that the introduction of his coupler would be hailed as a triumph of inventive genius

Test of a Feed-Water Heater.

During a late visit to the Missouri Pacific shops at St. Louis, we received from Master Mechanic Bartlett particulars of the thermometer tests he had made with Rushforth feed-water heaters that surprised us. On mentioning the matter a few days ago to Mr. W. H. Lewis, Master Mechanic of the Delaware, Lackawanna & Western, who has a number of locomotives in use equipped with the form of heater named, he offered to apply a thermometer to the water delivery pipe of one of his engines and give us the opportunity of watching it when the engine was at work. We readily accepted the offer.

The Rushforth feed-water heater consists of a stand of pipes through which the feed-water passes, secured in the smoke-box in front of the tubes. Agreeable to an appointment with Mr. Lewis, the writer got on at King land to an engine equipped with the feed-water heater, and which was ready to start with a train of 113 empty cars. Water was fed to this engine by a Mack injector. A thermometer was placed outside of the smoke-box, and was connected by a nipple with the heater coil at the point where it entered the boiler. There is no check-valve between the heater and the boiler, so that when water is not being fed the heater has the same temperature as the boiler.

Before the train started the thermometer stood at 35° degrees Fah., the temperature due to the pressure of 140 pounds to the square inch. When the start was made the mercury fluctuated a little, but it did not move much till the injector was started, when it steadily fell until it reached 224 degrees. The engine was working very hard pulling the train into speed. Readings of the thermometer were taken every two minutes during a pull of eight miles to Paterson. The readings were 224, 226, 229, 232, 237, 245, 253, 258, 260, 260, 260, degrees. The engine left the starting point with a green fire, and as it burned brighter the temperature of the smoke-box rose and the heat imparted to the water coils increased to correspond. The injector would deliver the water at a temperature ranging from 140° to 160°, so it would be fair to estimate that the feed water heater raised the temperature of the water 100° Fah. At 140 pounds pressure the total heat raised from the temperature of the feed-water would be about 1,180° Fah. This gives a theoretical heat saving of 8½ per cent.

In the Missouri Pacific engines a pump was used for feeding the water, and an average delivery temperature of 220 degrees was maintained. The increase of temperature in that case would be about 160° Fah., and the theoretical saving of heat would be 18½ per cent.

We have never before believed in feed-water heaters for locomotives, but there is no controverting of these figures. A device that saves over 10 per cent. of the heat necessary to evaporate all the steam used has great money-saving capabilities.

MR. EDITOR:—The above item from the *National Car and Locomotive Builder*, describes a test of a feed-water heater in use on some of the locomotives of the D., L. & W. R. R. for some years. The engine Dover, No. 2, was the first one that had it applied, and on several occasions I had a chance to talk with the inventor, who was anxiously watching the performance of his device. It appeared at first to be a never-ending job to get all the joints of the heater tight, for as it is composed of a number of pipes, crossing and recrossing the smoke-arch, in front of the flues, and joined to each other by bow-shaped connections, it had a number of joints subject to much variation in temperature, and consequent expansion

and contraction. After some time and a good deal of labor had been spent on the first one applied to No. 2, it became steam tight, and the engineer in charge reported a daily saving of nearly two tons of coal, with greater uniformity of steaming, thus nearly confirming the claims of the inventor, that the water was delivered to the boiler at boiling point, by the use of his device. The No. 2 boiler was at that time fed by a pump which forced the water through the heater into the boiler, and from calculations which I made at the time, on the size and length of the heater pipes, and the size and movement of the pump-plunger. I found that the water would be forced through the coil in less than a minute (when running at from twelve to fifteen miles per hour) and I doubted whether this was a sufficient time to raise the water from forty to sixty degrees to the boiling point, and my doubts seem to be confirmed by the tests above made, which seem to demonstrate that the heater added about a hundred degrees only, and that even with the head imparted in the injector, the water was not up to the boiling point with 140 pounds pressure. Nevertheless, these 100 degrees of heat imparted to the water in its passage through the heater, is that much saved, and as the heater is not expensive, and as it involves no additional cost in running, it ought to be generally adopted. Several more of the D., L. & W. R. R. locomotives have since been fitted out with this heater, and I suppose more of them would be in use now, if the heater on No. 2 had not given out, and scalded both the engineer and fireman in charge, and badly frightened Mr. Rushforth, the inventor, who happened to be on the engine at the time. As before mentioned, the heater consists of a series of pipes passing back and forth across the smoke arch, in front of the flues, and some of the pipes come in a direct line in front of some of the flues, so that the sparks drawn through them strike the pipes, and thus gradually wear them through. This is what caused No. 2's heater to give out, and as there is no check at the entrance from the heater, the steam came out at full boiler pressure, directly back into the firebox, blowing all the fire out of the door and fairly lifting the fireman, who was badly scalded over the tank. The engineer was also burned, and jumped off, leaving the engine which had just been cut loose from the train in the yard, moving ahead on a down grade side-track, which, however, opened onto the main track by a spring-split switch. Another engineer seeing the engine moving along at accelerating speed, had presence of mind sufficient to throw a switch and put her off the track at a good place, from where she was brought into the round house as soon as the steam allowed the men to approach her. This was

the only mishap which occurred with any of them, but for some time after this "the boys" all felt shy of them. This feeling is wearing off now and they are not so freely condemned as they were for awhile, but there is still a lingering distrust of them which prevents an acknowledgment of their merits as fuel savers.

What Causes Chimney Draught?

MR. EDITOR.—The above question was asked in a back number of the *Magazine*, but so far is not answered.

If you will permit a verdant fireman from the backwoods of Canada, to appear in the Mechanical Department and make his bow to your vast army of readers, he will give as near as he remembers, the theory of chimney draught.

The draught of a chimney is caused by a difference of pressure at the base of the chimney, acting in an upward direction, due to the difference between the weight of the heated gases in the chimney and a column of external air of equal height and cross section. This difference of pressure may be found by taking a unit of area of cross section—one square foot for example. The weight of the column of external air will be the height of the chimney multiplied by the density of the external air, and the weight of the column of heated gases of equal height will be equal to the height of the chimney multiplied by the density of the heated gases. For instance, if h be the height of the chimney, d the density of the external air, and a the density of the smoke column, the difference of pressure referred to will be expressed thus: $P = hd - ha = h(d - a)$.

This unbalanced pressure acts as a motive force to drive the heated gases through the chimney and out at the top.

What causes the noise commonly called the "exhaust report?"

Is there any difference in the volume of air admitted to the firebox through the front or back damper, the engine running ahead?

V. F.

MR. EDITOR.—I have been very much interested in reading "Side Rod's" answer to "Vulcan" in the December number of the *Magazine*. The explanation given is entirely satisfactory, but the thing that greatly amuses me about the letter of "Side Rod" is the remarkably close way that different authorities have of expressing themselves. If you look on page 53 of Sinclair's "Locomotive Engine Running" you will find the same subject treated word for word as "Side Rod" has explained it. Now it seems to me that Sinclair must have stolen "Side Rod's" thunder, which was a mean thing to do. Actions of that kind ought to be exposed.

Engineer.

MR. EDITOR:—I feel a natural pride in the B. of L. F. and its organ—you know a man can never forget his first love. I look to the locomotive firemen of America for the solution of many of the complex questions that now present themselves to engineers and firemen—not because they are firemen but because they are students and will become engineers. It is certain that it is hard to teach an old dog new tricks, and it is also true that too many of us engineers have set down satisfied with ourselves and the world (mechanically) at promotion.

This must stop, men must strive, study and think if they wish to improve—and firemen are students because they hope for promotion; why do they stop at promotion? Because the firemen are the coming engineers and they should be selected with that end in view instead of being chosen as coal heavers.

There has always been a fight against study by a whole lot of old moss-back engineers, claiming that the way to become engineers to learn from your engineer—and thus inherit all their faults and wrong ideas. Not that you cannot learn from your engineer—you can; but reason out everything he tells you and if he can't tell "the reason why," keep studying the question and asking questions till you prove him right or wrong. Never settle down to believe a thing till you know why it is so and the reason. No locomotive fireman can afford to be without one or two mechanical books and one or two mechanical papers. He cannot afford to stop studying because it is hard work or he is laughed at. The man who studies invariably comes out on top in the end. Men who get into positions they are not capable of filling, get out with a change of management, but the man who is advanced on merit generally hangs on.

Locomotive engineers have been made Master Mechanics in the past in preference to any other men, and they generally made good ones, but of late years there have been more men advanced to this position from the drawing room than from the foot board—because they are, as a rule, students, and study up all the questions they can of the requirements of the motive power service, while the most of the engineers are content with their engines, or do not think it necessary to be posted on other things than the mere getting of their mills over the roads. The Master Mechanics ought to be the best posted men in the service, know how to design or proportion engines for different grades of service, etc., and if the draughtsmen study these things and the engineers do not, whose fault is it when the company takes the man who does know and leaves the ones who do not?

You will not learn to run locomotives from books or papers. Actual experience

is necessary, but don't let an opportunity escape you for self-improvement; don't let your engineer disconnect a disabled engine alone; combine theory and practice, apply every rule to the engine itself. They are the teachers and will repay you in after years for all thought put onto their operation, and will punish in after years all neglect.

But to all firemen I want to say: "Don't get the throttle fever, study your part of the business first, study combustion of fuel, learn to keep your engine reasonably clean with as little labor as possible, be a good fireman, be *conspicuously useful* to your engineer, learn engineers' habits from the left side, learn to watch the track, learn to put in your fires so as to let you see every important signal between fires, don't get the notion into your head that you are not responsible and can take naps down hill; be on your guard, think how you would do if running and never forget that you will be promoted because you are a first-class fireman, not because you are a good engineer.

Mr. Editor, I hope you will not think this a sort of sermon; it certainly is not very mechanical but it is one of the most important things for a fireman to consider. While I was a fireman and an engineer I am free to confess I did not attach the importance to this subject it deserves, but since I came here I have seen the necessity of it. In studying mechanical questions, "be sure you are right, then go ahead," and remember that it is the student who works that "graduates with honor."

John A. Hill,
Editor Locomotive Engineer.

The Westinghouse Air Brake Company recently became the lessee of the patents owned by the American Brake Company, and among these are the patents on the inventions of George H. Poor, of St. Louis, for equalized pressure locomotive brakes, which have proven very strong and valuable, the device having been adopted as standard, and is now generally in use on the railways all over the country. The Eames Vacuum Brake Company is endeavoring to introduce a brake which is claimed to be a direct infringement on the device of the American Brake Company, and therefore the Westinghouse Air Brakes Company, lessee of the latter company's patents, has instituted proceedings in the United States court at Utica, N. Y., to restrain the Eames Company from manufacturing or selling the device.—*Trade and Traffic*.

PACIFIC BEACH, CAL., November 9, 1888.

MR. EDITOR:—I would like to have some one of our members inform me, if possible, what is steam before it reaches the atmosphere. I have heard much controversy on this subject and would like to have it explained.

47.

MR. EDITOR:—Although I did not write a line for the December *Magazine*, I feel proud to have called out ten pages of "roast beef" in reply, and if the writers are content with their efforts I certainly should be.

I thank "Vulcan" for showing J. B. Ward that I was correct in my "illustration and explanation as given in September, page 668, fig. 3." One sentence in that explanation reads, "the bottom has not moved at all." I wish Vulcan had been equally candid in answering the questions I asked him. I am obliged to Otto Hallbeck for demolishing the "horse-power rule" which Vulcan seemed to think worth repeating. It is very gratifying to have Mr. Lockwood so cheerfully make confession of his first error, and so heartily agree with me in the "key note to the whole situation." His illustrations of the cycloidal curves are very interesting, but he again switches off to the hammer-blow theory, which, I confess, I am not anxious now to investigate. I will call his attention to the one error in his leverage illustrations, which I have no doubt is at the bottom of all his trouble in the matter. See pages 893 and 894 December, fig. 1 and fig. 2. He says: "Fig. 3 will represent the same lines with the circular lines completing the circle as in Fig. 1, * * * the dotted parallel line corresponding to the rail in fig. 1." By "parallel line" he plainly refers to the dotted horizontal line A A, in fig. 3, a line which passes through the center of his "driver or pulley." How can it correspond with the rail, a diameter corresponding with a tangent? Mr. Lockwood will admit his mistake, I know.

As I wish part of the credit for getting Eccentric Strap readjusted in his old place in the Mechanical Department, I must excuse him for trying the "all this is dead wrong and the veriest folly" argument against me, for a few lines later he squarely says: "The bottom stands still is undoubtedly true of a locomotive driver. He is coming out all right. But he is afraid I have 'no earthly use for crank-pins' when they are down. I have never said so nor hinted it. When a driver moves forward the power must have grip on the lever and hold or bite on the track. When crank-pin is up, power gets its hold on the track through the frame and its leverage at the crank-pin. When the crank-pin is down, power gets its hold on the track through the pin, and exerts its leverage pull through the frame. There is always use for the pin, except on the dead center. Ash Hoe has shown, in his push-car illustration, November, page 821, how any one can prove this for himself.

I am not sure that Eccentric was satisfied with my answer. Will he and the others oblige me by thoroughly testing and experimenting with the following illustration, cutting out these figures to scale, with any

number of contact points they please. Let this (Fig. 1) represent a wheel, rolling on

Fig. 1

the rail R R in the direction indicated by the arrows. Let there be six equi-distant points in the figure which can touch the rail. In the first position, the point O has just touched the rail at O, and the point F is just leaving the rail. One-sixth of a revolution brings us to the second position indicated by the dotted lines, the point E having come to the rail at E. Notice that the distance from C to C is exactly one-sixth of whole revolution; that the distance from A to A is double that from C to C; that O has not left its position at O during this movement, but as a fulcrum it has "rested" on the rail. But you say it is not a wheel. Make it so, give it circumference so nearly true that 1,000 points will be presented for contact in one revolution. Then if the revolution is made in one minute, each point has rested $\frac{1}{1000}$ of a minute, during which brief time the center has moved $\frac{1}{1000}$ of a circumference and the top of the diameter O A has moved $\frac{1}{500}$ of a circumference. Or make it a perfect wheel, with an "inconceivable" number, say n points of contact. While these n points are successively in contact with the rail, the center will move forward one circumference. If this is done in a minute each point has rested one- n th of a minute, during which the center moved one- n th of a circumference, and the top of the diameter O A twice as far as the center. I submit this as helpful to any who will look into it.

Amboy Division.

DENVER, COL., December 3, 1888.

Editor Mechanical Department:

In answer to Bro. Gore's question I will say I worked for the South Coast from 1873 to 1878, and Mr. Stroudly was Superintendent of Motive Power and had been for some time. I would like to hear from Bro. G. again. A letter sent to the D. & R. G. round-house will find me.

R. Hind.

Patents About to Expire.

[Relating to railroads, which become public property during December.]

[Furnished by F. B. Brock, Patent Attorney, Washington, D. C.]

These devices may be appropriated by anyone, and are therefore of interest both to the public and manufacturers, and copies of the patents will be mailed at 15 cents each by Mr. Brock. Repetitious labor may often also be saved inventors by an examination of this record:

Grain car, A. E. Gordon.
Refrigerating car, A. S. Lyman.
Car seat frame, W. S. Auchincloss
Cars for elevated railways, G. Buntin.
Station indicator, J. B. Newbrough.
Car journal lubricator, Warner & Benham.
Car axle lubricator, S. Ustick.
Signal house, T. S. Hall.
Railroad signal, D. L. Schönberg.
Wrecking frog for railways, S. M. Hudson.*
Railroad Switch, E. A. Trapp.
Railroad rail, R. S. Sanborn.
Railway crossing, J. Wood.
Locomotive, Gartner & Diebold.
Car coupling, J. B. Tracy.
Car coupling, A. S. and H. H. Hallett.
Car coupling, G. W. Putnam.
Car coupling, T. B. Tremper.

WE are under obligation to Mr. T. R. Freeman, agent of the National Tube Works Company, for a sectional Mack injector, which enables any one at all familiar with steam engines to observe and appreciate the advantages of Mack's patent injector, designed for locomotive and stationary engines. The simplicity of construction is marvelous, reducing interruptions from any derangement to the minimum, and secures for the injector merited popularity. Many thousands of the Mack injectors are now in use, and, so far as we are advised are giving great satisfaction.

SPEAKING of rest for working men, it is now said that certain tools, like men, grow tired and require rest. This condition of edged tools is vouched for by the *Iron Industry Gazette* and facts are stated supporting the theory. For instance, a chisel lost its edge and temper. All efforts to make it cut were failures. It was known to be a good tool and created discussion in the shop, when a grizzled old veteran remarked: "The tool is all right, only a little tired; lay it away and let it rest." Sure enough, after a rest, its temper was restored, and it could cut again as if possessed of the king of sheol.

THE Mexican National railway is completed.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

A PLAIN TALK.

A dispatch from France announces that "Gen. Boulanger is about to be divorced from his wife and that one of the richest widows in France is waiting to marry him as soon as the divorce is obtained." Nothing could more effectually show the difference between the moral status of France and the United States. Gen. Boulanger may be called a leader among the French people, aspiring to the presidency, the dictatorship or whatever title this fickle race may choose to bestow if he should gain the ascendancy. He is cheered vociferously when he appears in public, followed by crowds of people, banqueted, applauded, the idol of the hour, and yet his infidelity to his wife, his intrigues with other women have become so shameless and so notorious that his wife is compelled to ask for a divorce. But he must have money to carry out his political ambition and so we are told that a wealthy widow is only waiting till the courts shall make it legal for her to deliver herself and her money to this unprincipled scheme. The wonder is that such a woman should wait for the formalities of the law.

What a striking contrast between the moral sentiment of that country and this. It is a well known fact, although it has never appeared in print, that a few years ago when one of our distinguished men was spoken of as a possible candidate for the presidency, it was discovered that his wife was about to make application for a divorce on the ground of adultery. Instantly the most prominent men of the party went to her and implored her not to do it, that it would completely ruin his chances and for the sake of her children she should desist. They were successful in their pleadings and her husband did receive the nomination and the election. We are all familiar with the scandalous stories of a similar nature that formed so unpleasant a feature of the campaign four years ago and which were so emphatically condemned by all respectable people. And yet in these cases the offences were committed years and years ago, before the parties involved had attained any prominence or ever expected to fill official positions. It would be utterly useless in this country for any man to aspire to the highest office in the gift of the people who was at the same time carrying on immoral practices in an open and public manner. This flagrant violation of decency belongs exclusively to foreign countries. We see in Eng-

land, France, Germany, Austria and Servia, the men who rank highest in official power offering a wretched and shameful example to the so called common people. Hence we find in all these countries morality at a low ebb, the marriage obligation lightly regarded and religion a matter of mere form. In no country is the moral sentiment so advanced and so powerful as in the United States, but even here it is far from being what it ought to be or what it will be in future years.

There is a class of people who would have us believe the world is growing worse and if we are to judge from the record furnished by the daily papers we will be tempted to believe that this is true, that never before was such an era of crime. But those who have made a study of this great question assure us that when we take into consideration the vast increase in population and the wonderful facilities for discovering and making public the crimes committed, we shall find that men and women are growing better and the world is steadily advancing toward a higher plane. In an address made recently in New York city, Mayor Hewitt said:

"The world has grown better during the last hundred years, much better within my own memory. There is less violation of the moral laws in this city, bad as it is, than there was one hundred years ago. I had occasion to examine the statistics of poverty and crime which have been preserved of a century ago, and you will be glad and doubtless surprised to know that this great city, into which is poured the ignorance, the crime, and the vice of the world, is nevertheless a better city, a more moral place, that there is less crime, less violation of the statute and the moral law to-day than there was a century ago."

What is true of New York is true in a still greater degree of the rest of the country. Reforms must begin at the top and before we can hope for resolute and effective measures to check the great evils of the present day we must have a higher grade of morality among the representatives of the people, those high in official station. While there is still a vast amount of intemperance and licentiousness among our statesmen and law-makers, yet there is an attempt to conceal it, to keep it out of the papers and away from the constituents at home. It is a point gained when public sentiment compels a man to cover up his tracks.

In this cable dispatch concerning General Boulanger there is a text for still another sermon in the brazen announcement that "a wealthy widow is waiting to marry him." There is no particular reason for supposing this to be a falsehood. We have similar instances on this side of the ocean. We do not have to go to France to find women who are willing to put themselves in the balance against wealth or position and call it even. We may find prominent examples in our own country of women who have sold themselves for an exalted station, marrying

men who had no claim to the love or respect of an honorable woman. Every year finds our American girls buying a husband and title. This French widow is no more blameworthy than her western sisters; all such women are objects of contempt. There is no man so wicked or so degraded or so miserable but that he can find a wife. Women hold themselves very cheap. They stop at no obstacles, they count no cost in their mad desire for a husband. "Anybody, Lord, so that it's a husband." In the upper stratum of society they sell out to the highest bidder; in the middle classes, girls getting sixty dollars a month throw up their positions and take a husband earning forty dollars a month; and down in the social depths women marry drunkards, jailbirds, men about to start to the penitentiary, not even taking the pains to inquire how many previous wives the man may have still living and undivorced. To this weakness on the part of women may be attributed in a great degree the wickedness of men. Whether they will acknowledge it or not it is the truth that men do not want to get so low that they will be despised by women. They presume upon the natural softness of woman, her lack of moral courage and her determination to have a husband. They are quite sure that though they may not get exactly the woman they want they are sure of getting one that will suit just about as well. Therefore they dissipate to their heart's content, break every moral law, outrage every principle of honor, and then proceed to take unto themselves a wife and found a family.

Will the time ever come when women realize to its fullest extent the power they possess and have the wisdom and the courage to use it aright? It lies within them to bring about a moral revolution. When they fix a standard of temperance and morality for men and compel them to live up to it or make them feel the weight of their disapproval, we may look for the beginning of a new era. Vice will never entirely disappear until the millennium is ushered in; but it may be made so odious and so disreputable that it will "hide its diminished head" and not sit in high places, flourishing in the tolerance of approval or at least of indifference. Women are slowly struggling into a faint and imperfect consciousness of their duties and powers, but the few who begin to recognize the light and the command are but a handful compared to the great body who have not yet awakened to their responsibilities. The temporal salvation of the world will eventually come through its women but it will not be through those of the present generation; for the mass of the women of to-day not only do not put forth an effort to assist in the improvement of the race but, by unkind criticism and chilling

discouragement, they counteract and retard the work of those devoted few who are sacrificing health and comfort and life itself in the endeavor to make better men and nobler women.

We think that Mrs. Collins in her excellent letter makes one mistake when she says, "I maintain that the education of the moral nature belongs exclusively to the mothers." We do not think it is right to make the mother wholly responsible for the moral training of the children. The obligation should rest equally upon the father of these children. It is just as much his charge as it is the mother's to teach them the cardinal virtues by precept and by example. These are parental duties devolving upon both and cannot be delegated entirely to either. Those are the best and most successful children who are brought up under a home influence that is exerted equally by both father and mother.

If a "Fireman's Sister," of St. Louis will assure us over her own signature that her poem is original we will take pleasure in publishing it.

For Woman's Department.

HEROINES.

How oft, when we read of some heroine brave,
And the wonderful deed she has done,
We lay down the book with a sigh and say,
"How I wish that I could be one."

We long for a chance to perform some act
That will bring to us lasting fame,
And we know that it is not the courage we lack
Thus to paint in gold letters our name.

But our opportunity somehow seems
Most perversely to pass us by,
Though on the ladder of fame, in our dreams,
We are always mounting high.

Dear sisters, a thought has occurred to me
While pondering this vexed question o'er:
May our names not be written in script fair to see
O'er the top of our own home door?

If our duties we do with a cheerful heart,
Nor fret, nor repine at our lot;
If our dear ones we greet with a welcoming smile,
With no plan for their comfort forgot;

If those around us we're ready to help
In whatever way lies in our power,
Will it not be a glory more lasting for us
Than the fame and praise of the hour?

The glory and praise of the world are dear,
But to us of far more value still
Are the praise and affection of those to us near,
And whose hearts we more surely fill.

Then let us each do what is given to us,
With bright faces respond to each call
For sympathy, aid and affection, and thus
We may become heroines, all.

Ella H. Cunningham.

*For Woman's Department:***THERE IS A LIGHT IN THE WINDOW.**

There's a light in the window, my darling,
 There's a light in the window for thee;
 While with joy I await thy home-coming—
 Thy coming, my loved one to me;
 I'll greet thee with loving caresses,
 I'll meet thee with heart fond and true,
 Yet the time seems so long while I'm waiting—
 Waiting, my darling for you.

There's a light in the window, my darling,
 Placed there by the one you love best;
 'Tis a beacon of hope in the distance,
 When nightly you seek home and rest;
 When the day's work is over, my darling,
 And the bright stars peep out one by one,
 The light in the window will guide thee—
 Will silently beckon thee on.

There's a light in the window, my darling,
 Delay not thy coming, I pray,
 For I've been anxiously waiting and watching
 Since the eve marked the close of the day;
 Then, haste thee for the night-shadows deepen
 O'er hill top, o'er valley and lea—
 But, harken! on the stair sounds a footstep,
 And I know thou art coming to me.

Mrs. Nettie Bloom.

WEST OAKLAND, CAL.

To the Editor of the Woman's Department:

I am a lover of the *Firemen's Magazine* and it is a welcome visitor at my little sod house in the southwestern Kansas prairie. I am holding down a claim—taking advantage of the right that Uncle Sam gives us. It takes courage and bravery to do it.

I have been looking over and reading in the *Magazine* all evening to see if I could find some word from Blue Valley, 312. I fail to find any. I don't see why the boys don't write and let you know how they are prospering. When I was there they were doing nicely, and a brave set of boys they are too. I felt so sorry for the boys when that horrible strike took place on the "Q.," for quite a number of them had been promoted to the right-hand side and doing well. They were all willing to leave their engines and stand up for the right. I am interested in the boys in the strike, and I ought to be. I have two dear brothers and a brother-in-law in the strike and lots of good friends, and not only for the relationship but for the good it is for our fellow countrymen. God grant ere long the battle will be over and the victory won, and I for one will rally for the noble boys in the strike on the "Q."

My brother was a Delegate to the Convention two years ago at Minneapolis, Minn., and attended the Convention this year at Atlanta, Ga. He wrote me he had a good time, meeting old acquaintances and making new ones, and reports a good time at the Convention. Since the Convention he has gone back east to our old native State, Pennsylvania, and is having a pleasant visit.

"Irene" says, in the October number, "Never before have I lived where there were no wild bird singers." We have no wild birds here. Never before have I lived where there wasn't a tree or even a sprig for them to chirp or shelter on. I sometimes wonder if God intended for it to be so. Or was it through our all-wise Providence

that our Government was so intended for Uncle Sam to give land to settlers to make homes, cultivate, improve and raise trees for the poor birds to have a home and shelter in the western prairie.

As this is my first attempt I fear it will occupy too much space in your valuable columns. If not you may hear from me again in some of my lonely hours. I conclude, wishing the brave, noble Brotherhood every success.

An Engineer and Fireman's Sister.

[This is a very nice letter but would have been much more so if our correspondent had left Blue Valley, 312, to speak for itself and the strike and she had told us more about that sod house and her experience in "holding down" her claim. This would be very interesting and much fresher and more readable than empty compliments to the noble Brotherhood. Try again, sister.—Ed.]

QUINCY, ILL., October 26, 1888.

For Woman's Department:

I have just finished reading the October number of the *Magazine*, and I see nothing about Galesburg. I believe you boys are afraid to write, as brave as you heroes have been through your trials and tribulations. The grand ball for the benefit of the striking firemen took place last evening and it was a success. Bro. Chester Marvin was married on the 24th to Miss Leah Martin, of our city. Mrs. John McDivett is confined to her home by sickness. Bro. Jas. Woods is in St. Louis visiting. Bro. Will McClain attended the engineer's convention. Charlie Jackson, of Mulvane, Kansas, is here visiting his brother, G. K. Jackson, of the B. of L. F. Bro. Theo. Iler has a little girl at his home. Bro. George I. Alexander spent last Thursday evening in Camp Point. Bro. George, doesn't your best girl live there? The Brotherhood men have a club of their own. It is called the Independent Railroad Political Club. Bro. Ben Higgins is President, C. C. Felton, Vice-President, and Geo. I. Alexander, Secretary and Treasurer. Bro. John McDivett spent a day with Galesburg boys last week. Bro. John Schell's mother has been very sick with the typhoid fever. Bro. Jack Lewis' wife is also sick. Good night.

An Engineer and Fireman's Sister.

FORT WILLIAM WEST, ONT., November 5, 1888.

For Woman's Department:

I have for some time past been a constant reader of your *Magazine*. I have always found useful reading in it and I appreciate it very much. I have taken this opportunity to say a few words concerning Lodge No. 225. The boys belonging to it are keeping it in a very flourishing state. There are only ten members in the Lodge, but they are all honest and industrious. Several members have been promoted since last spring and there is a prospect of some more being promoted in a short time. They deserve promotion for there is not any other Lodge whose members are so deserving of it. May they remain so deserving of praise is the best wish of one who will always speak in their behalf. I remain,

One Who Loves Firemen.

*For Woman's Department:***TWO HEARTS BEAT FOR ONE.**

Tell me, love, you've once forgotten,
Will you not forget again?
As time hurls us swiftly onward
O'er life's great and mystic plane.
Once you loved her just as dearly
As you say you love me now,
Yet your heart is quite emotionless,
As you look upon her brow.

Once, the words that gives me comfort
Were whispered softly in her ear,
Thrilling her heart with sweetest pleasure,
Casting out all doubt or fear.
Teaching her to love you fondly,
Telling her she must be true,
That the pleasures for you without her
In life, numbered very few.

Telling her your love grew stronger,
As the days were passing by,
And to gain for her the least pleasure,
You would, oh! so willingly die.
Picturing off for her the future,
In the most enchanting way,
That nothing but death, could take you from her,
You'd prove loyal to the last day.

But just as her love grew perfect,
And you became her light and joy,
As each heart-throb kindly awakened,
Some love dream without alloy;
There came a shadow o'er her future
That had been shining above,
All her light was turned to darkness,
And it was this, "You had ceased to love."

Slowly, but surely you drifted from her,
Widening each day the gulf between,
Seemingly changed from a life of pleasure
To one melancholy and serene.
Leaving her in a life of misery
To dream and ponder o'er the past,
As she sits, forever reaping
Over the joys too bright to last.

Now you come to me with your story
You have told it o'er and o'er,
You do not deny having falsely proven,
Or having loved once before.
Yet you say you have grown firmer,
And of life take a different view,
That time has surely changed you,
And made you wholly anew.

Without an effort I have believed you,
Plunged deeper in love without a strife,
Until, at last, it has bound me,
With ties that are stronger than life.
With my heart I truly love you,
I can not be cold and stern,
For my life I can not reject you,
And from you I can never turn.

Yes, I will take this risk of happiness,
And believe that you are true,
For your love can make me happier,
Than anything else can do.
So the future will be held from me,
For I know not the key to fortune's gate,
Now I will rest happy and contented,
And leave all to the mercy of Fate.

Oliver.

[You probably will be and certainly deserve to be as badly "left" as sweetheart No. 1.--Ed.]

GRAND RAPIDS, December 1st, 1888.

For Woman's Department:

Ralph Waldo Emerson asks, "What is civilization?" and answers, "The power of good women." What a suggestive thought. Bonaparte once asked Madame De Staël in what manner he could most promote the happiness of France. Her reply is full of political wisdom, "Instruct the mothers of the French people."

In these days of advanced thought, we hear a great deal of discussion in regard to woman's place. Just as if a *woman's place* was not any where where there was work for her heart, head, or hands. But admitting that some of the writers and thinkers on this subject are correct in their views, and that only when women are keepers at home do they perform their sacred duty or fulfill their destiny, that this, and this only is woman's true sphere, let us consider how we may make the most of it.

Mothers are the teachers of the human race. The intelligence and virtue of a community depend on the promulgation of sound morals in the families which constitute that community. In the homes of our nation lies the nation's strength. Our security for the duration of our free institutions, depends upon the prevalence of knowledge and education. This is easily obtained you say. Have we not the finest system of free schools in the world? Is not our country supplied with seminaries and colleges where both sexes have equal privileges? Yes; but still I maintain that the education of the moral nature belongs exclusively to the mother.

Now one word in regard to the training of boys. Mothers rarely fail to train their daughters to fulfill their probable destiny as wives and mothers, but why is it that the sons are not taught their duty of probable husbands and fathers?

Women must adorn and make happy the home, and it is hardly possible to read any book or article on the subject of education without finding it full of the necessity of training girls in the philosophy of making home happy; but not a word to young men in regard to their duties in domestic life. Is it that no such duty rests on the "lords of creation?" or does it come of intuition? Women can mold the lawgivers if they cannot help make the laws; and if the mothers of this generation want their daughters to enjoy privileges which they cannot, let them educate their boys to have broader views, less prejudice, and a better sense of justice; teach them from their childhood that their sisters are their equals, endowed by a Divine Creator with the same rights that they have. And who knows but that the girls of to-day may live to see that "good time" which is surely coming.

Mrs. A. E. Collins.

[Let us hear from you again.—Ed.]

BLOOMINGTON, ILL., December 5, 1888.

For Woman's Department:

I have been a constant reader of the *Fireman's Magazine* for the last two years and have never seen an item from Blooming Lodge, No. 40, yet. Whether the boys are backward or a little shy I can't say, but this I will say, they need not be ashamed of their Lodge, for a finer set of men never lived. Of course my husband belongs, that is the reason I speak so freely about them. Now boys, brace up, and let us hear from a few every month. If this don't land in the waste basket I will try and do better next time.

A Fireman's Wife.

With All Her Faults I Love Her Still.

It's true she writes a scrawly hand,
Puts in two "ts" where one would do,
And spells "dog" with an extra "g;"
But not a girl in this wide land
Is half so dear, and very few
One-tenth as sweet as she to me.

Dear thing! she sometimes says "I seen;"
"They was," "I's not," or "So be you;"
"Them's yours." "They's good—harsh to my ears;
But she is still my lovely queen,
Whose heart beats are to mine most true,
And will be yet for many years.

Some say that love is blind, and I
Would add that love is deep also.
Though grammarless and spelling bad.
My love is handsome, sweet and shy.
The secret of her love you'd know?
She's only five and I'm her dad.

—[Judge.

Home-Made Games.

Bean-bag is a noisy game, but has many redeeming qualities. It can be made with very little expense, and by any one who can handle a saw and hammer; it is a healthful, invigorating game for both boys and girls; and it contains a great deal of wholesome fun.

The front of the board is thirty-six inches long by twenty-two wide, and can be made of any kind of boards that are nicely planed. Nail narrow strips across the back at top and bottom. These strips should be two inches wide and be placed one inch from each end. Make a square hole in the board; let the top of the hole be nine inches from the top of the board and six inches square.

Another board twenty-two inches wide and nine inches high, serves as an upright to the front, and is nailed to the front so that the top, where the square hole is, will be nine inches from the floor, while the other end rests upon it.

This ends the boys' part of the work. Let the girls make five bags, six inches square of heavy cotton fannel, or some very heavy material; and one, nine by six inches, which should be of a different color from the five smaller bags. Fill these half full of beans, or, in absence of beans, corn will answer; saw them very firm.

Now that they have done their work (and I hope that the boys and girls have done this work themselves, and that the board and bags are both square and strong), the young folks may have a jolly game of bean-bag.

Place the board at least one foot from the wall; stand off fifteen feet and throw the small bags first, and then the large one, which we will call "Jumbo." If they go in the hole, the small ones count ten, and the large one twenty; if on the board but not in the hole, one half, which is five and ten. Thus you see that seventy is the highest that can be scored by one turn or throwing of the bags.

After all have taken a turn, the one scoring highest goes first on the new round, and the one gaining the most in ten, or in any number of throws agreed upon at the commencement of the game, wins.

No doubt that many of the boys who see this will think it a very easy thing to throw six small bags in a hole, but just let them try it. It is often the girls who excel in the game.

"WHAT a mobile countenance Miss L. has," said a gentleman to a young lady at a social gathering the other evening. "Yes," replied the young woman, with an effort to smile, for Miss L. was her hated rival. "She has a very Mobile countenance and New-Orleans molasses-colored hair." And she elevated her little pug nose as high as she could and found an attraction at the other side of the room.—*Elmira Gazette.*

How a Man Goes to Bed.

Eastern Argus.

Speaking of how a man goes to bed, an exchange says: "There's where a man has the advantage. He can undress in a cool room and have his bed warm before a woman has her hairpins out and her shoes untied." That is how it looks in print, and this is how it looks in reality: "I am going to bed, my dear, it is 10:30." No reply. "Now John, you are always late in morning. Do go to bed." "Yes, in a minute," he replies, as he turns the paper wrong side out and begins a lengthy article headed "The Louisiana Muddle." Fifteen minutes later she calls from the bed room: "John, come to bed and don't keep the gas burning here all night," and murmuring something about "the bill being big enough now," she creeps between the cold sheets, while John sits placidly on, his feet across the piano stool and a cigar in his mouth. By and by he rises, yawns, stretches himself, throws the paper on the floor and proceeds to that vigorous exercise, shaking the coal stove. Just at this stage a not altogether pleasant voice inquires: "For pity's sake, ain't you ready for bed yet?" "Yes, yes, I'm coming; why don't you go to sleep and let a fellow alone?" Then he discovers that there is coal needed. When that is supplied and rattled into the stove he sits down to warm his feet. Next he slowly begins to undress, and as he stands scratching himself, and absently gazing on the last garment dangling over the back of the chair, he remembers that the clock is not wound yet. When this is attended to he wants a drink of water, and away he promenades to the kitchen. Of course, when he returns his skin remembers that of a picked chicken, and once more he seats himself before the fire for the last warm up. As the clock strikes 12 he turns out the gas and with a flop of the bed clothes and a few spasmodic shivers he subsides—no, not yet; he forgot to see if the front door was locked, and another flop from the bed-clothes brings forth the remark: "Good gracious, if that man ain't enough to try the patience of Job!" Settling her teeth hard, she waits the final flop, with the accompanying blast of cold air, and then quietly inquires if he is settled for the night, to which he replies by muttering: "If you ain't the provokingest woman."

Why She Did It.

Washington Critic.

"My dear," said a Congressman to his daughter at breakfast, "wasn't young Brown here last night until 12 o'clock?"

"Yes, papa," she replied with a pretty little blush.

"Well, my dear, you should not permit it. It has been that way for several nights, hasn't it?"

"Yes, papa."

"Don't you know that is hardly the proper thing to do?"

"Yes, papa."

"Then, why did you do it?" he asked impatiently.

"Because, papa, I expect to go away next week, and I am rushing the business so that there will not have to be an extra session."

The father's voice was silled and the breakfast was finished in silence.

Not Delicate.

Washington Critic.

Mrs. Wrongwerd's daughter is a strong, healthy girl, but withal quite pale. A lady, in speaking to her mother about her the other day, remarked: "I saw your daughter the other evening, and she was looking quite pale. Isn't she very delicate?"

"Delicate?" replied Mrs. R., with a sniff of scorn. "No, indeed. I'll venture there ain't a girl in Washington society as indelicate as my daughter is."

A Good Mother-in-Law.

The *Christian Register* says: "So many foolish and flimsy jokes are published about the mother-in-law that it is a good tonic to read such refreshing and appreciative testimony as that which John Adams offered to the memory of his mother-in-law. This letter, written more than a hundred years ago, also indicates the broad, progressive views which Mr. Adams took in relation to the sphere of woman."

The letter was written by President John Adams, to his wife, Abigail Adams, on the death of her mother, in 1785:

"Your mother had a clear and penetrating understanding and a profound judgment, as well as an honest, a friendly, and a charitable heart. There is one thing, however, which you will forgive me if I hint to you. Let me ask, rather, if you are not of my opinion? Were not her talents and virtues too much confined to private, social, and domestic life? My opinion of the duties of religion and morality comprehends a very extensive connection with society at large, and the great interests of the public."

"The benevolence, charity, capacity, and industry which, exerted in private life, would make a family, a parish, or a town happy, employed on a larger scale in support of the great principles of virtue and freedom of political regulations, might save nations and generations from want, misery, and contempt."

Her "Sphere" and His "Sphere."

The *Vineyard Gazette* has a good word to say in favor of "helping the women folks:—"

"Young man, or old one either, rest assured that it is a good deal more 'manly' for you to perform such household duties as you have the opportunity for, than to burrow luxuriously in bed, while your wife, or mother, or sister gets up in the cold and makes the fires; and spend the balance of the day in loafing about town, while she cooks, and sweeps, and washes, and scrubs, and looks after the children, and beats mats, and lugs water, and perhaps brings in wood, and forty other things, some of which you could relieve her of without personal inconvenience, and for none of which have you spunk enough to furnish her with a dollar-a-week assistant. The 'manliness' which will permit a woman to work her life out because the males of her family must limit themselves to typically masculine pursuits, ought not to enter into any system of philosophy governing the conduct of men."

Lapland Babies at Church.

Wide Awake.

The Lapps are a very religious people. They go immense distances to hear their pastors. Every missionary is sure of a large audience and an attentive one. As soon as the family arrives at the little wooden church, and the reindeer is secured, the papa Lapp shovels a snug little bed in the snow, and mamma Lapp wraps baby snugly in skins and deposits it therein. Then papa piles the snow around it, while the parents go decorously into church. Over twenty or thirty babies lie out there in the snow around the church, and I never heard of one that suffocated or froze. Smoke dried little creatures, I suppose they are tough! But how would our soft, tender, pretty, pink and white babies like it.

She Meant Snow.

A little South Boston girl of less than five years was very anxious to use her sled, so Monday when she said her evening prayer she finished with, "Please God, send some snow, so that I can take out my sled." During the night it snowed enough to cover the ground, and when she awoke she saw it fast disappearing. As soon as she was up she went to the widow and looked out silently for a few minutes, when she broke out: "Our Father, I meant snow; I didn't mean this horrid slush!"

Who Made the Racket?

"What was the great racket I heard in your woodshed after you got home from skating last night?" asked one small boy of another.

"It was me swingin' the buggy whip for fun," the other replied.

"But I heard somebody jumpin' around, too."

"Oh, that was pa, seeing if he could jump over the wash-boller and two tubs."

"But who was it yelled so like thunder?"

"Why, every time he made an extra high jump he would holler kinder in fun, you know."

Nothing Unusual.

Tid-Bits.

Mrs. Patrician (to new girl)—I suppose, Bridget, you overheard my husband and I conversing rather earnestly this morning?

Bridget—Iudade I did that, mum.

Mrs. P.—I hope you do not consider that anything unusual was going on?

Bridget—Niver a bit, mum. I wanst had a husband meself, mum, an' niver a day passed that the neighbors didn't belave one or the other uv us would be kilt entirely.

Had Him on the Hip.

Omaha World.

Omaha Husband—Now I think this is going too far. You promised me that you would countermand your order for that dress.

Omaha Wife—I wrote to the firm that very day.

"But here is the dress and the bill for it—enough to bankrupt me almost. How do you explain that?"

"I gave you the letter to mail, and I suppose you forgot it as usual."

Easily Explained.

Texas Siftings.

Customer—"I must say I don't like this milk."

Milkman—"Why, what's the matter with it?"

"Just look at it. Don't you see that it is blue?"

"Well, yes; it is a little darker than usual."

"What is the cause of it?"

"I think I can explain it."

"I'd be glad to hear it."

"You see, we weaned the calf a few days ago, and probably the old cow feels a little blue about it. That's the only way I can account for it."

Not Covered by a Patent.

St. Paul Herald.

An osculatory expert says the reason kissing is so pleasant is because the teeth, jaw bones and lips are full of nerves, and when the lips of two persons meet an electric current is generated. Yes, and a person doesn't have to be bothered with a battery or dynamo, or anything of the kind. There's no central office to be rung up when he wants an electric interview with his best girl. There's no patent on the business, and no blasted corporation to charge him \$5 a month for his kissaphone. Yes, this kissing business is a great thing, even if it is a cheat-nut.

He Fell in with Her Supposed Humor.

Pittsburg Dispatch.

Mrs. B. was a nice, fussy little lady, who took great delight in disparaging the excellent dishes she set before them.

"I'm dreadfully sorry," she exclaimed, "that the pudding didn't turn out well, Mr. Jigson. Do have some more of it, though I'm really almost ashamed to ask you to."

"Don't worry, ma'am," responded Mr. Jigson, "I've had lots of worse pudding than this in my time."

And yet the hostess did not seem to be made thoroughly and completely happy by the reply."

Mother and Child.

The Question.

A gentle, timid woman, a native of Pennsylvania, and only daughter of a most tender widowed father, married a man who had wooed her with seemingly ardent devotion. Their wedded life was scarcely a year old before he began to treat her with cruel neglect. Two children, a boy and girl, were born in close succession. The husband grew more neglectful and unkind, and finally flaunted in the very face of his wife and the world, his contempt for all moral, as well as legal restriction, by publicly walking, driving and otherwise associating with the most infamous women of his native town. At this juncture the wife's father took her and the children to his own home. The poor young mother, blinded by the narrow doctrines of a sect to which her own and her husband's people belonged, could find no Scriptural ground for divorce. The father, in vindictiveness of spirit, claimed the children. The law, in *merry* (what a travesty?) allowed the father to keep them until they were seven years of age. Could any slow torture of the inquisition equal the agony of that creeping doom to this mother's heart? The strain was too much for her; she died within a year. There are mothers who cannot die, who must live to see a tender little girl given up for life to the care of such a father. And yet there are women who do not want to help to make the laws by which they are governed.

Left Out.

Detroit Free Press.

"Say! Mrs. Murphy!" she called, coming up from the market, "but I saw your husband in the patrol-wagon this morning."

"You did?"

"Yes, and he was riding along as grand as you please, having a whole seat to himself."

"That's like Patrick, Mrs. O'Reagan. He's the most selfish man you ever saw. This is the third carriage-ride the police have given him in month and I haven't had one—not a single one!"

Reports say that in one year in New York, 176 fathers abandoned their infant children; while the law of that State gives to the father dying, the right to dispose of the children by will; or, living, to bind them over as he pleases without consent of the mother. He has the right to take the child from its mother as soon as it is born; while the mother legally owns her own baby about as much as a cow owns her calf.

Change in the Buttons.

Louisville Post

"How styles have changed since I was a girl," said an old lady. "When I was young we used to wear our dresses up to the neck, and gloves with only one button. Now they wear the glove up to the neck, and only have one button on the dress."

A Striking Difference.

Harvard Lampoon.

Mrs. Jollyboy—Where on earth have you been?
Mr. J.—I cannot tell a lie, I've been at m'olish.
Mrs. J.—That's where we differ. I can tell a lie—when I hear one. Cruel silence, during which something is heard to drop.

A little chap, told by his mother to say his prayers and to ask for what he wanted, prayed "for one hundred brothers and fifty sisters." The mother hurried the little sinner off to bed before he could say Amen.

Wee Fanny bit her tongue one day and came in crying bitterly. "What is it?" asked her mother. "Oh, mamma!" she said, "my teeth stepped on my tongue."

I'M HURRIED, CHILD.

"Oh, mother, look! I've found a butterfly hanging upon a leaf. Do tell me why there was no butter. Oh, do see its wings! I never, never, saw such pretty things—All streaked and striped with blue and brown and gold,
Where is its house when all the days are cold?"
"Yes, yes," she said, in accents mild,
"I'm hurried, child."

"Last night my dolly quite forgot her prayers, An' when she thought you had gone down stairs, Then dolly was afraid, an' so I said:
'Just don't you mind, but say 'em in the bed, Because I think that God is just as near.'
When dolls are 'fraid, do you s'p'ose He can hear?"

The mother spoke from out the ruffles piled,
"I'm hurried, child!"

"Oh, come and see the flowers in the sky—The sun has left; and won't you, by-and-by, Dear mother, take me in your arms and tell Me all about the pussy in the well?
Then tell me of the babies in the wood! And then, perhaps about Red Riding Hood?"
"Too much to do. Hush, hush, you drive me wild,

I'm hurried, child!"

The little one grew very quiet now, And grieved and puzzled was the childish brow; And then it queried: "Mother, do you know The reason 'cause you must be hurried so? I guess the hours are little-er than I
So I will take my penneles and will buy A big clock! Oh, big as it can be.
For you and me?"

The mother now has leisure infinite; She sits with folded hands and face as white As winter. In her heart is winter's chill. She sits at leisure questioning God's will.
"My child has ceased to breathe, and all is night! Is heaven so dark that Thou dost grudge me light?"

O life! O God! I must discover why
The time drags by."

O mothers sweet, if cares must ever fall, Pray do not make them stones to build a wall Between thee and thine own, and miss thy right To blessedness, so swift to take its flight! While answering baby questionings you are But entertaining angels unaware;
The richest gifts are gathered by the way
For darkest day.

Emma Burt.

We want the ballot because the liquor traffic is entrenched in law, and law grows out of the will of majorities, and majorities of women are against the liquor traffic. But as steam can be applied to locomotion only through an engine, and as electricity can be utilized only through a battery, so, in a republic, we can condense the opinion of this majority of women into law only through the magical little paper which comes down as still

"As snowflakes fall upon the sod
But executes a freeman's will,
As lightnings do the will of God."
Frances E. Willard.

A LADY told this story the other day in *Forbes*, the incident having occurred in her own family: A small boy was requested to look up the word anonymous and use it in a sentence. He found the meaning to be "without a name," and thereupon handed the following to his happy parent: "Mamma has given us a new baby; it is anonymous."

It was a little girl's exclamation when she saw the leader of a band gesticulating from his pedestal to the performers: "Oh, see the man stirring up the music with a stick!"—*Evening Record.*

THE BROTHERHOOD.

JANUARY, 1889.

Strict Neutrality.

MR. EDITOR:—As a Locomotive Fireman, a member of the Brotherhood, I have taken a lively interest in the strike on the C., B. & Q., from the first. I have studied the situation. I have eagerly devoured all the information attainable from private and public sources. I have sought to make myself familiar with the inception facts bearing upon the strike, and I find that it had its origin in injustice to locomotive engineers. Firemen were not directly involved. Remotely their interest were included, but as wage-workers desiring that justice should be done to all men who toil for a living, firemen were profoundly solicitous that the engineers should be treated fairly. Firemen were not *neutral*, they did not propose to observe a "strict neutrality" in the fight between the C., B. & Q. and the engineers. What is neutrality? Webster says it is "state of taking no part on either side; indifference." To be strictly neutral is to be severely, uncompromisingly indifferent to results. It does not matter to a "strictly neutral" person what vital questions are involved in a contest between a workingman and a corporation. To be neutral is bad enough in such a case, but to be "strictly neutral" is to emphasize indifference, magnify it, treat the question at issue as supremely insignificant, unworthy of consideration. Why? Is it because the bread and butter of the strictly neutral party is not placed in jeopardy? Is it because one Brotherhood of railroad employes don't care a fig what becomes of another Brotherhood of railroad employes? If the Brotherhood of Firemen had been "strictly neutral," and had permitted the Brotherhood of Locomotive Engineers to go it alone on the C., B. & Q., many thousands of dollars would have been saved, and the Brotherhood of Locomotive Engineers would have had a lesson on "strict neutrality" it would remember for many years. But the Brotherhood firemen on the C., B. & Q., were neither neutral nor "strictly neutral." They were not "indifferent." They didn't stand aloof. They were not like the old woman, when her husband was fighting the bear, indifferent as to which of the contestants won the victory. No, the firemen took up the fight with the engineers, and their courage and devotion has cost them suffering and sacrifices, about which they care nothing provided the severe experience of the struggle leads the Brotherhood to comprehend the fact that their only security is in federation. If, however, after fighting nearly a year, the future is to be distinguished by strict "neutrality" of one Brotherhood towards another, the penalty

will be defeat, and cherished hopes will be blasted. In the matter of a just grievance neutrality cannot exist, there can be no indifference when it is shown that a wrong exists unless it can be shown that truth and justice and right are dead.

Fraternally,

Fireman.

PACIFIC BEACH, CAL., November 25, 1888.

Editor Firemen's Magazine:

I take pleasure in announcing the marriage of Bro. Edward C. Doyle, of San Diego Lodge, No. 90, to Miss Ada M. Pocock, a native of California. The wedding took place on the 5th inst., at the Episcopal church in this city, and they have the wish of a host of friends, that their journey through life may be illuminated with the sunshine of happiness and prosperity.

We had the pleasure of a short visit lately from Bros. Dunn and Milton of San Diego Lodge, No. 90., who were pleased to see the brothers on the Pacific Beach R. R. contented and happy. We have nothing to complain of, as the President, Mr. A. G. Gassen, does everything in his power to make things pleasant for the boys. A good word must also be said in praise of our M. M., Mr. O. M. Wilson. He is a first-class mechanic and a perfect gentleman in every respect.

Fraternally yours,

47.

CHICAGO, ILL., December 15, 1888.

Editor Firemen's Magazine:

I don't make any pretensions as a scribbler for the public eye. I ain't a "literary fellow," I am only a fireman on a "pony." My father was for a long time a brakeman, got poor pay, and having a large family to support, I had to get out and hustle before there was any beard on my lip or chin—and I don't have much use for a razor now. You will catch on, as you read this "maiden effort," that my education is mighty small, but I read a good many books and am a night school scholar. For three or four months past, I have been wrestling with grammar. I can't say that I like it. But my teacher says I will "get there if stick to it," and I am going to stick.

I said I read a good many books, that's a fact, I read the *Firemen's Magazine*, every one. I have noticed that you have had something to say about the conductors. My father is now a conductor and a member of the B. of R. B. I ain't a member of the B. of L. F. yet, but will be after a while. I got my father to read what you said about the conductors. He said I must get one of the conductor's books and see how it talked back at you. I did that the other day. I hunted around and at last scared up the *Railway Conductor's Journal* for the month of December, 1888. When my "pony" would be standing on the track, not requiring my attention, I would glance at the pages of the book. I couldn't do much in the way of reading, so I concluded to wait till my "pony" was in the stable and then I would read the book carefully. I have performed the job and have had a car load of fun.

I see some of the book's correspondents sign themselves, "Yours truly in P. F." I tried to guess what the letters meant. I asked my school teacher and my father. My teacher, who is a man of learning, said the letters were "cabalistic," but my engineer said he had never heard them in the cab, but that they might be scholastic. My father said they meant "Punch Freely" or "Punch Fast" or "Punch Furiously" or "Punch Forever," but we had to give it up. I struck a poetical contributor, who says, "there is no ground so pure that will not produce a thorn beside the fairest rose." I asked my teacher, who writes poetry for an agricultural paper, called the *Golden Sheaf*, what he thought of it. He said the writer was a born poet, but remarked that "the simile was imperfect, because pure ground that produces the 'fairest rose' must necessarily produce thorns, since the rose tree or the rose bush, is thorny." I noticed a correspondent who wants conductors to have souls "unutterably full" of love—a love that "wells up in his heart," a sort of arlesian well—and to make the expression clear, the writer says "we want to enlarge our store house of charity and fill it to the brim." My teacher says that means "chock full," but said he had never heard of a house "being brim full."

But as I went on through the book I struck page 636—"Editorial." Then I learned that C. S. Wheaton, Grand Chief Conductor, is also editor. Being a grammar student, I expected to find the English language done up in the best style. I read the first article. I thought it a *fin dandy*. I laughed. I asked my teacher to read it and he went into conniption fits, and exclaimed: "May I be forever grammatically, emphatically and dogmatically smashed if ever I saw grammar so banged, bruised, wounded, tortured, murdered in all my born days." I asked my father to read the editorials, which he did. When I asked him what he thought of it, he remarked that "Wheaton had better abandon the pen and resume the punch." He said, "If orders were to come to him cooked in that style, he would never know when to stop or go ahead." He thought Wheaton's "We," "I," "Us," "Our," had got tangled up to an extent, that the whys and wherefores of a railroad wreck, in comparison were easily understood." I noticed that Editor Wheaton talks about educating people, particularly conductors. Now, I want firemen to get hold of the December Conductor's Journal, and read the great article on page 636, by Mr. C. S. Wheaton, editor, with four assistant editors, and when they get through to ask themselves. How is that for high? How is that for grammar, for style, for diction? And if they do not exclaim, "saw my leg off," I will pay the editor's tuition to a night school for six months. Mr. Wheaton says, "The step from a train to the editorial chair of a periodical, is much greater than but a few can appreciate." For Mr. Wheaton, it was not a step. My teacher says it was a leap, a bound equal to anything recorded of the chammois." When Wheaton leaped from the train to the editorial chair, my father says

he cleared at a bound the gulf between punch and "periodical." And that if he is happy in his editorial chair, it is proof positive, that there is bliss in ignorance.

This being my first trial to write for a "periodical," I showed it to my teacher. He said "it would do for a starter," but that I was "too prolix." I just remarked, "I had put in my best licks" and that "I would bet my 'pony' there was more grammar in it than could be found in Wheaton's editorial on page 636 of the Conductor's periodical."

My teacher, being a poet, who writes for the *Golden Sheaf*, said, "If I was willing, he would like to fix up the tail end of my communication with a few rhymes." I told him to sail in. He has handed me the following:

Come brothers of throttle and scoop,
Of switch and brake, come with a whoop,
Come singly, in squads, or all in a bunch,
And let us do honor to Editor Punch.

Editor Punch with a leap in the air,
Sprang from a train to an editor's chair,
He was the G. C. C. of the O. R. C.
And thought he could write like an L. L. D.

Editor Punch in a haughty manner
Said he didn't care a punch for grammar,
And that "little difference could be seen,
'Twixt a preposition and the verb to be."

Editor Punch said "what he writ,
He'd punctuate as he seen fit."
And that "them what sneered at what he said,
P. D. Q. he'd punch their head."

Editor Punch said 'twas "mighty true"
That the "O. R. C. on the C. B. & Q.,
Had scabbed and blabbed for old man Stone,"
And that the O. R. C. "could go it alone."

Editor Punch is no tarnal fool,
But Editor Punch should go to school.
Then his writings might do to munch,
By men who are not "Knights of the Punch."

Yours in "P. F." which means "Perfect felicity,"

Pony F.

URBANA, ILL., November 28, 1888.

Editor Firemen's Magazine:

I have just returned home from an extended trip through the South. For many years I have been desirous of seeing that portion of our country, and at last my curiosity has been gratified and satisfied. There is a large surplus of men at Birmingham, Ala., Memphis, Tenn., and Kansas City, Mo., also at intermediate points. I would therefore advise those of our brothers who have been thinking of taking a Southern trip for the purpose of bettering their condition, to stay where they are. I am not settled yet, but in all probability will go into business for myself near here. I long to be independent of the road, and away from the dangers connected with it. I wish to thank the boys who favored me in my travels, firemen, engineers and conductors were all real brothers to me and I wish to show my gratitude and kind remembrance of their favors, and hope if any of them travel this way they will call on me.

Fraternally,
A Brother Fireman.

LIVINGSTON, MONT., December 2, 1888.

Editor Firemen's Magazine:

Old Father Time has almost made his terminal trip on engine No. 1888, and soon the call-boy will be knocking at his door calling him for his first trip on engine No. 1889; and we, the brothers of this grand and noble Brotherhood of Locomotive Firemen with him and all his passengers a prosperous and "Happy New Year."

Grand Officers and Brothers, go back with me to the first of this year; and look around your own locality and neighborhood and note the changes. Some have been prosperous and apparently happy, while others have failed and gone down in ignominy. Some who were happy, enjoying good health, in the morning or noon of life, have passed away, gone on that journey from whence no traveler returns.

Our noble Brotherhood has marched through a campaign of civil warfare, and taking our foemen on the scales, I am sure in my judgment, the Brotherhood of Locomotive Firemen would weigh sixteen ounces to the pound, which our foeman, that scab corporation, the foe of labor, the tyrant of equality and justice, with the letters C., B. & Q. stamped on its brow, would fail to even balance the scales with a single ounce.

It is true the strike is not over, the campaign still reigns, but what a difference. On one hand our noble Brotherhood is advancing to new fields, is prosperous, and harmonious, fraternally and financially, while on the other hand the C. B. & Q.'s stocks are depreciating in value, trade ruined, cold winter on hand, and wreck and ruin staring the grinding corporation in the face.

Brothers, join me in offering up thanks to the good Almighty for his kindness and guidance in giving us patience, fortitude and courage in this fight, for guiding us in our counsels, giving us health and prosperity, to respond to our brothers on the C., B. & Q. in cheering words, good advice and financial deeds.

To such a noble Brotherhood, nothing but good luck and prosperity await you, and for every good deed of charity, may it return to all a hundred fold.

While we have been members, we can very easily recall successes, pleasures and disappointments, but in such recalls, we must not let success run away with our heads, pleasures with our hearts, or disappointments with our souls.

Officers and brothers: Years ago, when adversity clung to my shoulders, out of employment, sick at heart and about to give up in despair, I was met by a member of our noble Brotherhood (good soul he is now numbered with the silent majority) who extended me the hand of fraternal friendship, looked to my wants and helped me. I then thanked God that there was a noble Brotherhood, and that I was a member and I vowed that as long as life lasted and this Brotherhood existed, I would do my utmost to keep up my membership, and if such a thing or event should come that our old ship should be doomed to go down, I shall cast my lot on said ship and go down with the rest. But stop! Why

such reflections? Our Brotherhood, while doing noble deeds, living up to the golden rule, keeping clear of political ruts, secret societies, religious controversies, nationality divisions, shall never in the history of progress and civilization go down or sink. We have met adversity in the past, we are fighting the tyrant at present, and I can safely say we do not fear or dread the future. Brothers stand by the right and fear the wrong, pay your dues and adhere to your obligations, be benevolent as far as consistent and in your power. Let sobriety and industry be your corner stones and foundation of principles, integrity and honor your watchwords, and I can safely assure you that if adversity or mishap should overtake you, that providence shall weigh out to you good luck and prosperity tenfold, if you obey these principles and follow this honest and hearty advice.

Would that I had ten thousand pens to write and tongues to sing the praises of this great Brotherhood, but then I cannot make or draw any Spencerian flourishes, and am lacking as a "Singer," but I can manage to some extent a "Baldwin." Brothers, I shall close, thanking you all sincerely who shall have the patience to read these poor lines, but if you will consider them in the spirit in which I write to our grand *Magazine*, I shall be more than satisfied.

To my Grand Officers, my brothers and friends, to the wives, mothers and sweethearts of my Grand Officers and brothers, I extend a hearty wish to all for a "Merry Christmas and a Happy New Year."

William T. Field.

STRATFORD, ONT., November 6, 1888.

Editor Firemen's Magazine:

It affords me real satisfaction to record a pleasant incident which occurred at a regular meeting of Avon Lodge, No. 38, October 7th. To Bro. Geo. Nursey was confided a letter with instructions not to open and read it until the Lodge was opened and ready for business. At the proper time the envelope was broken and to our great surprise and pleasure, it was found to contain \$65, presented by the ladies of Good Endeavor Lodge, No. 1, B. of L. F., and accompanied with a brilliant address. It goes without the saying that the members of Avon Lodge will not forget the favor, but will on all occasions bear testimony of their gratitude and seek in every way possible to reciprocate the favor. By this act the ladies have set an example of business tact that many of our Lodges could profitably follow. It is to be hoped that the ladies' auxiliary societies throughout Canada and the United States will be encouraged, and it is our wish that Bros. Jno. Halpin, Jas. Harvey, Samuel Spencer, Thomas Dolan, F. Calvin and A. Sauls will fulfill their promises and become benefactors. If this is done, many merited rewards will follow, among which will be pleasant memories of the Brotherhood of Locomotive Firemen, which is so fortunate as to have a society composed of kind and generous hearted ladies, who have rendered us such valuable assistance.

No. 38.

TO MRS. HARPER.

Dear madam, kindly spare me,
I'm not prepared to die;
Or friends must grave-ward bear me,
With many a fearful eye;
My heirs I know will miss me,
My twins no more shall kiss me,
And one or two who hiss me,
Whene'er my phiz they spy.

What have I done to tease you,
And load your pen with spleen?
Lord knows I try to please you
Within the *Magazine*;
I write you rhyming blather,
In every sort of weather—
Now let us pull together,
And be my peerless queen.

You've charged me oft with spooning
Amongst the sisters here;
Besides, my plaintive crooning,
You claim is insincere.
If Mrs. Sargent's handy,
Please ask her isn't Shandy
As dignified a grandee
As e'er sought a lady's ear.

She'll tell you I'm good natured—
Especially with plex—
And also comely featured,
Which I would fain disguise;
Quite social with the ladies,
The Sylvias, Sues and Sadies—
You know a rhymers' trade is
To catch the fairest prize.

That's why I now implore you
To spare me evermore;
Please do, and I'll adore you
Until my life is o'er!
And every month I'll write you—
'Tis better thus than fight you,
For every time I slight you,
Like once or twice before.

—Shandy Maguire.

PORTLAND, OREGON, December 1, 1888.

Editor *Firemen's Magazine*:

I am one of your constant readers, and have often wished I could write something worthy of being printed in our organ. I don't believe that any of the Brotherhood, knights of the pick and scoop, takes a greater interest in the welfare of our Order than I do. I have now been firing an engine for three years, and I propose to fight it out on the line till promotion comes. I study the machine and I study men. Our officers want good men—steady and skillful. I don't blame them for that. The worthy get promoted, I am not in a hurry. When I get an engine I am going to know how to run it. There are persons I see and hear talk who are always trying to make out that firemen are not skilled laborers—and the men who talk that way are not always Master Mechanics or General Superintendents but men who have been firemen and ought to give firemen all the credit that is due them. What is skill? Is it a combination of practical knowledge gained by experience combined with fair capabilities? The moment a fireman is promoted to be an engineer he becomes a skilled laborer—but the moment before his promotion was secured, he belonged to the unskilled class. Is there any sense in such talk? Now I hold that from the day a man begins to fire an engine he acquires skill. I am talking about the ma-

jority of firemen, there are doubtless exceptions. The longer a man fires the more skill he has, and if he is studious and observing, his skill increases more rapidly. I have known firemen who at the expiration of two years' service were qualified for engineers. They had the required skill, they understood an engine thoroughly. At the expiration of three years service thousands of firemen have all the skill required, and if at the expiration of four years a fireman is not thoroughly skilled to run an engine, I don't believe he ever will be. My opinion is that firemen are skilled laborers. They serve as firemen to acquire skill, and they do acquire it, and such is the decision every time a fireman is promoted. The experience an engineer has, increases his skillfulness, but that has nothing to do with the fact that he was a skilled laborer before he was promoted—and it is just here that great injustice is done firemen, because of the marked difference in wages between skilled and unskilled labor. The simple truth is that firemen are skilled laborers, and are entitled to all the benefits to be derived from their experience. I don't want to be understood as claiming that firemen should have engineer's wages, but I do demand for firemen all the credit that rightfully distinguishes skilled from unskilled labor. The skill necessary for an engineer to run an engine, is acquired while he is a fireman. There is no dodging the fact, hence, I say, firemen are skilled workmen. Yours truly,

Pilot.

NEW YORK, December 11, 1888.

MR. EDITOR:—I put a big price on your kindness in giving me a little space in our Brotherhood book to write such opinions as I have on brotherhood subjects. I don't want to wear out my welcome, but in reading recent issues of the *Magazine* I find so many things I like that I make bold to scribble some more of my thoughts. I can see that the Atlanta Convention was a great success. As a knight of the pick and scoop I am proud of the good words spoken by the big guns of Georgia in honor of our great Order. Such things show that the "boys" are held in high esteem. I don't want to be boastful, but I just want to say, the brotherhood boys deserve all the good things said of them at Atlanta. Now, Mr. Editor, I read all the books of the railroad brotherhoods. I find time to do it. I want to know what the boys in other brotherhoods are doing, and then I make comparisons between these books and our *Magazine*, and what they are doing and what we are doing, and the more I read and the more I compare the prouder I am of my Order and of my book. We are getting there all the time. We are not behind in anything, our Brotherhood don't wait to be told what to do. We run on our own time tables. In looking over the chronicles it is seen, that our Brotherhood does the right thing at the right time. Biennial conventions was a wise movement. Nearly all the states have biennial meetings of their legislatures. We have set a good example. We are the first to turn a wheel in

favor of federation and our *Magazine* has done a good work in advocating that movement. The inauguration of an Employment Bureau strikes me as a movement that will do great good. I like it and hundreds of firemen will have cause to bless the convention that started it. I want to thank the delegates for enlarging the *Magazine*. Maybe you will think I want to write a puff, because you let me have some of your space. I don't want you to think that. I read the *Magazine* for years before ever writing a word for its pages. The *Magazine* has been a great help to the Brotherhood, and I know it will now be a still greater help because it will have more room for the discussion of important subjects. I notice that the Convention sat right down on the resolution racket and for this I for one am greatly thankful. The "whereas" business has been carried to such lengths that it made the average fireman tired. It was the same old story over and over again, and that we are to have no more of it is something to be thankful for, and convinces me that the Convention was level-headed. There is one more thing that I want to speak about and that is the new law about payment of dues, I think it of the greatest importance. The law can't be misunderstood, and to comply with it means financial soundness and prosperity. No order ever went down that was financially sound, and no order ever survived that was financially weak or bankrupt. To guard against financial disaster is the wisest sort of legislation, and in doing that the Atlanta Convention will receive the thanks of every brotherhood fireman worthy of the badge he wears.

Throttle.

FARGO, DAK., Dec. 1, 1888.

Editor *Locomotive Firemen's Magazine*:

The December number of the *Magazine* is at hand and in it we see the jealous wall of "an engineer's wife;" poor woman, to lay the blame of our innocent little flirtations on us alone, and never a word for the gentler sex, who meet us half way. She seems to forget that it takes two to flirt as well as to quarrel. Campbell thoroughly expressed her feelings when he said:

"Never wedding, ever wooing,
Still a love-lorn heart pursuing,
Read you not the wrong you're doing.
In my cheeks pale hue?
All my life with sorrow striving,
Wed, or cease to woo."

Now try as hard as I will I cannot see the harm in either the "Crown Prince" on the right, or the lesser light on the left, gently and timidly waving a handkerchief (perhaps not too clean) at some pretty girl in an open door whose laughing eyes and heaven-kissed lips dare you to acknowledge her smile. Why; we would lack courage if we refused, and railroad men have not as yet had that charge brought up against them.

Now Mrs. Engineer, suppose you take up the thread of a fickle firemen's life for four and twenty hours, you would perhaps see him come

in tired and sleepy in the morning. Then breakfast—to bed—up at noon to work on his engine, an 18x24 mogul, maybe till supper, after which about the time any well regulated firemen should be wending his steps toward the abode of his fair dulcinea, the festive caller shows up, book in hand—"second fifteen." At once, bright prospects, fond hopes, sunny smiles, fade like flowers before a December blast. He hies to his cheerless room to discard the immaculate shirt and clothes to match, (the smile went long ago) off to his engine, where, after an hour's or so of tedious waiting they start, perhaps to arrive at the wrong end of the division in the morning. Well for the first twenty miles or so he drags along tired and weary, his highness is out of humor, the "79" don't steam. The brakeman is dead and as a seat room is concerned his wants are only limited by the supply; and so it goes till a dim light looms up in the darkness; well you say "that ain't much," not to you perhaps, but to him everything. The semi-dead man begins to liven up, he gives the grates a vigorous shaking, and begins to load her, not for a hill, but for the aforesaid light. By this time we are about abreast of it, and behold the curtain is quickly raised, a faint shadow appears before the light, the now thoroughly alive fireman grasps the white light and answers the signal, good night, then turns to his work with a light heart. Things take a cheerful turn. The index on the steam-gauge floats around to a hundred and enough, and all is well.

Possibly the old gent was just locking the barn for the night when the lamp was waved, and methinks I can hear him mutter something about them "darned railroad men"—"queer cusses," but he was simply not on to the combination. Now "An Engineer's Wife" if we do sometimes answer a fair darling's timid gesture, please forgive us, it is simply a tribute we pay to your sex, one we gladly pay, because we love you, you that comprise about all that is lovable in this world. Try to obviate the necessity for flirtation on the road, by flirting with us at home, and of course I am too charitable to think, the fellow you used to flirt with has found more favor and smiles in the eyes and lips of that "wretch" across the street.

Good bye,

Acme.

CANASTOTA, N. Y., December 2, 1888.

Editor *Firemen's Magazine*:

Rickard Lodge, No. 229, had a grand time at the second annual ball, given at Mechanic's Hall, November 22. A highly interesting feature of the ball was a watch contest between two charming young ladies—Miss Leary, of East Utica, and Miss Bicycle, of West Utica, which was won by the former. The attendance was large and enjoyment ruled the hour. I will close by informing the readers of the *Magazine*, that Bro. Alonzo Pease, of 229, being the happy father of a ten pound fireman, has, with a liberality for which he is distinguished distributed the cigars.

Respectfully,

J. G. Agans.

COGITATIONS AND INTERROGATIONS.

BY SWITCH.

MR. EDITOR:—The winter has come, I hope not of discontent,
 If so, I could wish that some princely son of
 York,
 Might make it glorious summer, ere half of it is
 spent.
 Because I like the music of the babbling brook
 and lark,
 But if ice and snow and sleet,
 Are to cover track and street,
 If the mercury will go
 To zero, and below,
 Please tell us if for such grievances there's a bet-
 ter antidote
 Than three square meals a day, thick flannels
 and a storm-built overcoat?

We are inclined to the opinion that
 "Switch" has studied the Arctic question
 thoroughly, and has hit upon the panacea
 for such ills as old Winter visits upon the
 wayfarer, particularly those who run trains.
 —ED. MAGAZINE.

MR. EDITOR:—Since some time last June, ac-
 cording to the almanac,
 Old Sol's been going South, and the days have
 been growing shorter,
 There isn't poetry nor fancy in such astronom-
 ical facts,
 Still, they suggest the query, "Don't you think
 the boys had 'oughter'
 Have an eye to the hours,
 To improve their mental powers?
 To assemble and debate
 Such questions as relate
 To their vocation? To understand the machine,
 And make themselves familiar with all the ec-
 centric powers of steam?"

Manifestly time is money, and big money
 too, to those who use its precious hours in
 educating themselves so as to master in
 every detail, their chosen profession. Let
 the Lodge room be transformed into a school
 room, and the boys most frequently in at-
 tendance will be the first promoted.—ED.
 MAGAZINE.

MR. EDITOR:—I know how to fire an engine, no
 matter what the fuel,
 And I rate myself the equal of any locomotive
 engineer,
 And what I want to know: Don't you think it's
 cruel,
 For a firemen to be looked down upon with a
 supercilious sneer?
 'Tis not for brain and brawn,
 To flatter and to fawn,
 But step with manly tread;
 To hold up its head;
 And now, Mr. Editor, level-headed and serene,
 Pray tell us your conclusions in the *Firemen's*
Magazine.

We know of nothing more offensive than
 an aristocracy of labor, in which one toiler
 sets himself above another, simply because
 he receives more pay, or toils in another de-
 partment of the world's industries. To our
 mind the beaded sweat on an honest labor-
 ers brow is more resplendent than the dia-
 monds in the crown of a king.—ED. MAGA-
 ZINE.

KANSAS CITY, MO., December 5, 1888.

To the Editor of the *Firemen's Magazine*:

DEAR SIR:—I have been for a long time, a con-
 stant reader of the organ of the Brotherhood of
 Locomotive Firemen, and have not failed to no-
 tice your criticisms upon what you have been
 pleased to characterize as the improper actions
 of the O. R. C. There has often been a severity
 of expression which I have thought was not
 merited, because I have failed to remember at
 what time or under what circumstances the O.
 R. C. has been less than kind towards the Broth-
 erhood of Firemen. Your criticisms have been
 chiefly inspired by the strike on the C., B. & Q.
 But what grievances, I ask, did the firemen have
 which made them strike against that system?
 I have never heard that they had any grievance
 whatever. The engineers said they had griev-
 ances. The firemen made no such declaration.
 The firemen simply made the grievance of
 the engineers their grievance. Why? At the
 time the fireman took upon himself the griev-
 ance of the engineers, what was their stand-
 ing in the B. of L. E.? Could an engineer,
 a member of the B. of L. F., join the B.
 of L. E.? not much. He was only eligible for
 admission into the B. of L. E., when he had
 abandoned the B. of L. F. He had to forswear
 any and all allegiance to the B. of L. F. He had
 to disrobe himself of the regalia of his old home
 order—turn his back upon it, and then, possibly,
 he could become a member of the B. of L. E.
 Was it for this, your Order took upon itself the
 grievances of the engineers on the C., B. & Q.?
 Was it for this open insult and humiliation that
 the firemen went out with the engineers and
 took upon themselves the burdens of a prolonged
 strike? Will you answer? I should like to see
 your explanation.

But it has come to my knowledge as it has,
 doubtless, to yours, Mr. Editor, that at the Rich-
 mond Convention, your dear friends, whose
 grievance you made your own, with such grati-
 fying alacrity to the engineers, did not repeal
 the law which would enable a member of the
 B. of L. F. to become a member of the B. of L. E.,
 and yet you accept, as your compensation for
 your devotion, the taffy of being called a "twin"
 of the B. of L. E. The "Twin Brotherhoods"
 sounds well, but it is all sound. If there is any
 sense in it, please say where it comes in? Oh,
 but you say they "coöperate" with the firemen.
 Indeed. But I notice their coöperation is not
 federation, and it seems to me, there can be
 neither one nor the other while the B. of L. E.
 hold firemen in such such contempt, that an
 engineer, who belongs to the B. of L. F., can't be-
 come a member of the B. of L. E. until he re-
 nounces his connection with your Brotherhood.

The Editor of the *Firemen's Magazine* has not
 hesitated to use his lash quite freely upon the O.
 R. C., which never antagonized the B. of L. F. I
 await to see if the *Magazine* will exercise its
 courage of conviction in dealing with the B. of
 L. E.

Yours truly,

Conductor.

THE CORNER MAN.

Man wants but little here below, while with this mortal throne.

Man wants but little here below, nor wants that little long.

At least that's what the poet said, in years of long ago,

It might do then, it won't do now, as I'm prepared to show.

Man's wants are numerous as the sand upon the ocean's shore,

The more man gets, the more he wants for to increase his store,

He'll strive and struggle to get rich by foul means or by fair,

Man's grand and great ambition is, to be a millionaire.

He'll get a corner up in food, in coffee, bacon, wheat—

He'd get a corner if he could in God's own mercy seat.

Then put the prices up so high, to reach that tranquil strand,

The rich could scarcely pay the price, the poor would all be damned.

What cares he if the widow starves, or orphans cry for bread?

He'll strive and struggle all he can come out ahead,

He'll rob the laborer of his hire in every way he can,

Then pose before the public as a shrewd, a self-made man.

— Edward Splatne

NEW ALBANY, IND., November 4, 1888.

Editor Firemen's Magazine:

Please allow me space enough to answer Bro. "Throttle's" letter, which I gladly read this afternoon. I am sorry he is still of the same opinion and thinks it does not "please God." I would ask if it does not "please God" how could these things happen? It does not please us to have a worthy brother scalded and crushed, nor does it please us to see some firemen suffer tortured. But remember God moves in a mysterious way His wonders to perform. Just think, when some fireman gets hurt, God looks down in sympathy and says, "suffer a little longer and then I'll take you home, where accidents never happen." On the other hand, when a worthy brother gets killed, God says "come and enjoy the mansion I've prepared for you." The very angels rejoice to see some worthy brother cross the narrow flood, and make safe landing on that heavenly shore. It is so strange we can't agree on the subject, "It pleased God." Your wish that all firemen would reach that blessed home of spirits is exactly the same as mine. But it does not make any difference, if they go "via the C., B. & Q.," or the short line, or some other line. If they get there it will "please God." I would ask Bro. "Throttle" if he does not approve of either of the formulas "It pleased God," or "it pleased the devil," to be so kind as to give me the proper form for resolutions, for I may have to serve on a committee and should not like to be reproved. Bro. "Throttle" seems to think my liver is reversed and my liver also. I would first say, I haven't got the throttle fever if I am on the

right side. Let us not drop this subject for I like to hear Bro. "Throttle." So I am willing to continue until Bro. "Throttle" is converted and can see why "It pleased God." Bro. "Throttle" says we took the ground it could hardly "please God." I'd advise him to get off that ground for he is in great danger. *Reverse Lever.*

PINE BLUFF, ARK., Nov. 22, 1888.

Editor Firemen's Magazine:

As the *Magazine* is not often troubled with correspondents from this locality, I desire sufficient space to say that Aetna Lodge, No. 163, is fulfilling its mission and keeping up with the procession. Our first grand ball, which came off on the 20th inst., was a social and a financial success. The leading citizens of Pine Bluff were largely represented, and the ladies, God bless 'em, were out in force. Our thanks are due to Mrs. O. J. Holmes, who improved the occasion to present to the Lodge a beautiful bible and altar-cloth. The presentation speech was made by our popular Mayor King White. As this was the first ball given by the Lodge, the members are much elated over the success which attended the venture.

Fraternally,

A Brother of 163.

Unknown Addresses.

GEO. P. WRIGHT.—Is requested to correspond with the Secretary of Triumphant Lodge, No. 47, without delay.

GEO. E. SHEREDAN.—Any one knowing his address will confer a favor by notifying N. E. Denison of Great Eastern Lodge, No. 4, Portland, Maine.

JAMES McKENNA.—Of Capital Lodge, No. 46, is requested to correspond with the Secretary of his Lodge. When last heard from he was in St. Louis, Mo.

W. C. WRIGHT.—When last heard from was in Helena, Montana. Any one knowing his whereabouts will please communicate the information to his sister, Mrs. Joe Yost, No. 252 Plymouth Av. N. Minneapolis, Minn.

PAUL GOODRIDER.—When last heard from, in 1884, was in Bellville, Ohio, running on the road. Any one knowing his present whereabouts will confer a great favor by informing his sister, Miss Mary Kaiser, No. 11 Leslie St., Syracuse, N. Y.

WILLIAM FISHER.—An engineer, some time since running out of Stratford, Ontario, on the G. T. R., will confer a favor by corresponding with S. Vaughn, No. 5 Draper St., Toronto, Ont., or any one knowing his address will please address as above.

JOHN DIVINE.—When last heard from was an employe on the N. Y. L. E. W. R. R. He has light complexion, a high forehead and is short in stature. His brother, Luke H. Divine, B. of R. B. Lodge, 66, Providence, R. I., will be thankful for any information concerning his brother's whereabouts.

JAY E. SHOTTON.—Left Collinwood, O., his home, in December and, it is supposed, started for California. He is a boy fourteen years of age, has black eyes, dark hair and wears checked clothes. Anyone knowing his whereabouts will confer a great favor by addressing his mother, Mrs. F. W. Shotton, Collinwood, O.

Personals.

WM. C. FADEL, Master, and B. S. Williams, Receiver, of Old Fort Lodge, No. 347, passed a successful examination and have been rewarded with promotion. They are sure to give satisfaction on the right side.

We are pleased to mention the fact that Bro. F. M. Blaney, member of Cactus Lodge, No. 94, at Tucson, Arizona, and a Delegate to the Atlanta Convention, has been promoted, and now, as an engineer, is on the right-hand side.

S. S. WILSON, of Unwin Lodge, No. 305, is to be congratulated upon having been presented on Nov. 7, with a son, and a splendid specimen at that. The members of Unwin Lodge congratulate Bro. Wilson and his good wife, and the *Magazine* adds its felicitations.

S. BRAY, of Golden Rule Lodge, No. 131, was married to Miss Katie Flavin on Thanksgiving day. Bro. Bray has been in the employ of the Wisconsin Central for three years, and has the best wishes of a host of friends for a happy and prosperous wedded career.

A. H. BUSE, of Forest City Lodge, No. 10, was recently married. The members of No. 10 cordially congratulate the bride and groom, and wish them the largest possible share of earthly felicities. In all such cases, the *Magazine* desires to be numbered with the congratulators.

It affords us pleasure to announce the marriage of Bro. E. F. McNulty, Master of Fortune Lodge, No. 120, and Delegate to the Atlanta Convention, to Miss Lizzie Malloy, which took place Nov. 28th, at Syracuse, N. Y. We extend to the bride and groom our congratulations and wish prosperity and happiness.

THE members of Charity Lodge, No. 5, were surprised and pleased to learn that their brother, A. Arnum, had married one of the fairest daughters of St. Thomas, Miss Annie Maston. The members of No. 5 join in wishing the happy bride and groom as many blessings and felicities as heaven ever vouchsafes to mortals.

OUR esteemed brother, Homer Davis, erstwhile, Vice-Master of Vigo Lodge, No. 16, and still a member of that Lodge, though now a resident of Chicago, was married on the 15th of November to Miss Florence Gundy, of Danville, Ill. We congratulate bride and groom on their mutual good fortune, and feel assured that as the years go by their felicities will increase.

WE are pleased to announce that Bro. Frank Dupell, of Enterprise Lodge, No. 75, of Philadelphia, has arrived and taken his position in the Grand Lodge offices, as Chief Assistant of the Grand Officers, and has taken hold like one to the manor born. He has fallen in love with our sunny clime, for though
"The frost is on the pumpkin and the fodder 's
In the shock,"

the days have been Italian and the atmosphere just of the quality required to make eating, if not a thing of beauty, a real joy at least, three times a day. Suffice it to say, Frank finds no difficulty in becoming acclimated of our Presidential State.

Amusements.

Fargo Lodge, No. 85, B. of L. F., gave its tenth annual ball on the evening of November 29th. The *Fargo Republican*, of Nov. 30th, says: "The ball given by the locomotive firemen, at the Armory, was an exception to the rule, because it was more brilliant and more enjoyable than usual," and adds, "the Armory was never more tastefully and artistically decorated, and it is doubtful if there has ever been a larger

company of pleasure-seekers gathered there than on this occasion. There were perhaps two hundred couples on the floor, and a merrier crowd it would be difficult to bring together. Rupert's orchestra 'did themselves proud' in the music they furnished, some of which were new selections, that were excellently rendered. The dancing programme consisted of eighteen numbers, to which several extras were added during the evening. Almost every one present participated, and their enjoyment of the favorite pastime was such that it was continued until the approach of the otherwise 'silent hours of morn.' The supper at The Columbia was all that it promised to be—a really elegant repast that was greatly enjoyed by the guests. The ball was admirably conducted throughout, and if the firemen needed anything than their past social achievements to give them prestige and preëminence as entertainers, their tenth anniversary ball certainly answers that purpose." It is pleasant for the *Magazine* to record such incidents in the career of the Brotherhood, for no class of toilers are more deserving of success than Brotherhood Firemen.

Acknowledgments.

SCHENECTADY, N. Y., November 15, 1888.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—With feelings of gratitude I wish to acknowledge the receipt of \$1,500 due me on my disability claim. I also wish to return my sincere thanks to the members of 18-K Lodge, No. 210 who took such a great interest in my welfare. Wishing the Brotherhood God speed in its noble mission, I am,
Yours fraternally,

J. W. VROOMAN.

ELDORADO, KAN., November 17, 1888.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

I desire to communicate my thanks to the officers and members of Cactus Lodge, No. 94, for their kindness in paying to me the \$1,500, on policy held by my brother, W. R. Thompson, and hope that God will bless the officers and members of the Brotherhood, and that it may prosper.
I remain yours,

HANNAH THOMPSON.

ST. LOUIS, MO., Nov. 7, 1888.

To the Brotherhood of Locomotive Firemen:

I desire to acknowledge the receipt of a draft for fifteen hundred dollars (\$1,500) from Bro. Pate, Receiver of Pea-e Lodge, No. 109. Please accept my grateful thanks for the remainder of my life for the prompt payment of my disability claim, and thanks to the members of our Lodge, and to the Brotherhood for their many kindnesses. God bless our noble Order.

Gratefully yours,
C. A. DURNELL.

BROCKVILLE, ONT., November 9, 1888.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—It is with feelings of sincere gratitude that I wish to acknowledge the receipt of a draft for \$1,500 due me on my disability claim. I wish also to tender to the members of No. 69 my warmest thanks for their kindness to me during my illness. To all members of the Brotherhood: Take my advice and keep your dues paid up promptly, for you do not know how soon misfortune may overtake you. I sincerely wish that prosperity may always attend the Brotherhood and that it may forever continue in its noble mission of charity and peace.
Yours fraternally,

WILLIAM FLANIGAN.

TERRE HAUTE, Ind., December 1, 1888.

To the Officers and Members of Vigo Lodge, No. 16,
B. of L. F.:

We take this method of acknowledging the receipt of a draft for fifteen hundred dollars (\$1,500) it being the amount of the policy held by R. H. Nicholson, and which has been promptly paid by the Lodge of which he was a member. Please accept our thanks and our best wishes for the prosperity of your noble Brotherhood.

ELIZABETH NICHOLSON,
LIDA NICHOLSON.

OLNEY, ILL., October 8, 1888.

To the Brotherhood of Locomotive Firemen:

I desire to return my heartfelt thanks for the payment of \$1,500, the insurance due me upon the policy of my son, Grant. I also wish to thank the members of Tried and True Lodge, No. 361, for the respect shown him after death and for the beautiful floral tribute. God alone can reward them and may He ever protect each member, and finally receive you unto Himself in that Brotherhood above, where sickness enters not and death never comes, is the earnest prayer of
MRS. MARGARET HILL.

NEW YORK, N. Y., October 15, 1888.

To the Brotherhood of Locomotive Firemen:

DEAR SIRs AND BROTHERS:—It is with feelings of gratitude, I acknowledge the receipt and payment of my disability claim by draft for \$1,500, amount of insurance, on the 10th inst. I also desire to tender thanks to the members and brothers of Lodge No. 140, for their kindness and good care taken of me during the long period of my sickness, of more than a year. Wishing you all good luck and the best of success in all your undertakings, I remain,

Yours fraternally,
E. P. MACDONALD.

PALMERSTON, ONT., October 23, 1888.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN AND BROTHERS:—Allow me through the columns of the *Magazine* to express my gratitude toward the Order for a draft for (\$1,500) fifteen hundred dollars, which I received on the 18th of October, due me as a disability claim. I sincerely thank those who rendered me assistance during my recent illness, and may success crown the efforts of the Grand Officers of the B. of L. F. May He who watches over us protect the members of the B. of L. F. is the best wishes of your disabled brother.

Yours fraternally,
THOS. H. COSFORD.

NORWALK, OHIO, October 13, 1888.

To the B. of L. F.:

Allow us to say we have received from the officers of C. R. Whipple Lodge, No. 142, of which our brother, S. M. Acker, was a devoted member, a draft for the amount of \$1,500, the full amount of his policy which he had made payable to our father, but he having died, left it to us to distribute, so we have purchased a monument with a portion of it, and if a y of the members of the Order should visit Woodlawn cemetery of this city, they can see a monument with the emblem B. of L. F. on it. The balance of it goes to the comfort of a widowed mother.

We extend our sincere thanks to the Brotherhood of Locomotive Firemen, and especially to the members of Lodge No. 142, for their assistance in the finding of the body of our brother, also to Lodge No. 198, for favors shown in our sad bereavement.

Yours fraternally,
CHARLES AND DAVID ACKER.

EASTON, PA., October 13, 1888.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRs AND BROTHERS:—I wish to return my sincere thanks to one and all, through the columns of our *Magazine*, for a draft for the amount of \$1,500, due me on my disability claim. The draft was presented to me by Bro. J. W. Sinclair, Receiver, and Bro. E. Teel, Collector, of Excelsior Lodge, No. 11. I would earnestly say to all, be sure and keep up your standing in your noble Order, for you know not how soon misfortune may overtake you. May God bless each and every one of you and may the Brotherhood prosper and be to you what it has truly been to me.
Your disabled brother,
JESSE ROSEBERRY.

NEW ORLEANS, LA., November 14, 1888.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to acknowledge through your valuable *Magazine*, the receipt of a draft for \$1,500, the amount of the policy of my brother, the late Sidney Gilbert, who was killed in a collision at Trustville, Ala., March 15, 1888. I wish also to thank the members of Lodge No. 200, of Meridian, and especially do I desire to thank Mr. Will Jones, of Birmingham, Ala. Words cannot express my deep gratitude for what he did for my dear brother at the time of the accident and at the funeral, and for the kindness show to my mother and my brother, George Gilbert, while in Birmingham. Gentlemen, may your Lodge be protected, and may our Heavenly Father watch over your Brotherhood is the prayer of a sister of a good and faithful fireman.
MISS SARAH GILBERT.

TENNYSON can take a worthless sheet of paper, and by writing a poem on it make it worth \$5,000. That's genius. Mr. Vanderbilt can write fewer words on a similar sheet and make it worth \$50,000,000. That's capital. The United States government can take an ounce and a quarter of gold and stamp upon it an "eagle-bird" and it is "Twenty Dollars." That's money. The mechanic can take the material worth \$50 and make it into a watch worth \$100. That's skill. The merchant can take an article worth 25 cents and sell it to you for \$1.00. That's business. A lady can purchase a comfortable bonnet for \$10, but prefers to pay \$100 for one. That's foolishness. The ditch digger works ten hours a day and shovels out three or four tons of earth for \$1.00. That's labor.—*Locomotive Engineer.*

Mr. H. S. Ives, by the use of brass, can wreck a railroad and appropriate millions of other people's money. That's keeping well within the law. "Old Hutch" by the use of money can corner wheat and advance the price of bread to workingmen. That's prescience. Jay Gould and others of his type can turn water into railroad stocks and collect dividends on the investment. That's a miracle. The C. & B. Q. corporation can employ scabs and lose \$8,000,000 in twelve months. That's economy.

THERE were 222 railroad accidents during the month of August last, against 127 in August, 1887, an increase of 95; 68 persons were killed and 202 injured; total killed and wounded, 270. For the month of August 1887, the total killed and wounded was 323, showing a difference of 53 in favor of August, 1888, notwithstanding there were more accidents.

Correspondence must in all cases be brief and to the point.

Subscribers must begin with the January, April, July or October number and expire with the year.

Change of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

JANUARY, 1889.

MR. STREATOR, the Labor candidate for President, received, all told, about 150,000 votes.

The completed and equipped railroads in the United States January 1, 1889, will be about 160,000 miles.

The steamship *Great Eastern* was built at a cost of \$3,200,000. She was recently sold for \$100,000 for the old iron that could be got out of her.

The Matchless Metal Polish Co., of Chicago, awarded its prizes on January 1st, after the *Magazine* had gone to press. The announcement will be made in our next issue.

The fastest time on record made by a locomotive is ninety-two miles in ninety-three minutes, on the Philadelphia and Reading road, one mile having been made in forty-six seconds.

The Toledo, St. Louis & Kansas City narrow-gauge railroad has been changed to standard gauge, and now east of the Rocky mountains the narrow-gauge road has practically disappeared.

GEORGE E. DETWILER, editor of the *Chicago Knights of Labor*, referring to certain infelicities developed at the late convention of the order, remarks: "We have always been an ardent advocate for keeping the doors of the laundry closed while the soiled linen was being renovated." The editor is disposed to tote level with the order, but remarks "So far as I am concerned I desire to give Mr. Powderly and the General Assembly if necessary, written notice that, in the language of the immortal prince of muggumps, I carry my sovereignty under my own hat."

A PUBLICATION of high authority gives the number of commercial travelers in the United States at 250,000, who are credited with shipping about 300,000,000 tons out of the 400,000,000 tons of goods annually transported by the railroads.

In future, by order of the Convention, and in strict conformity with the laws of the Order, all printing and supplies must be ordered by the Secretary of Subordinate Lodges. There will be no exception to the rule. It will be lived up to to the letter.

THE United States has the largest ferry boat in the world, the *Robert Garrett*, plying between New York city and Staten Island. She has 1,500 horse-power engines, is 236 feet long, can carry 5,000 passengers and screws herself through the water at the rate of eighteen miles an hour.

THE city of Vancouver in British Columbia boasts of phenomenal growth. Three years ago it boasted of three houses all told. It now has a population of 8,000 and 30,000 is the estimate for 1890. Vancouver is the terminus of the Canada Pacific railroad, and in its shops employs from 600 to 800 men.

SOME several centuries ago, when Nero flourished as well as fiddled, a project was set on foot to cut a canal through the isthmus of Corinth in Greece. Work was begun but not completed. Some years ago work was begun again, and now, at an expense of \$9,000,000, the canal is ready for business.

SOME years ago, in the days of the poet prophet, Isaiah, a time was said to be coming when nations should "learn war no more." The United States is taking lessons in the other direction, and special appropriations of \$3,450,000 have been made by the present Congress to perfect means to carry on war should it become necessary.

THE Northern Pacific Railroad Company makes announcement of the promotion of Mr. J. E. Phelan to the position of Master Mechanic of the Missouri Division. Mr. Phelan is widely known among our members, all of whom will hail his advancement as the reward of merit. The *Magazine* tenders its most hearty congratulations.

It is stated that the Brotherhood of Railroad Brakemen, during the last fiscal year received \$145,405, and that of this amount \$123,000 was expended for benevolent purposes. Such facts are well calculated to arrest the attention of the general reader, as they indicate purposes worthy of universal commendation.

LATE in November, Grand Chief P. M. Arthur, and Grand Master F. P. Sargent, were called to New York to settle a controversy over the question of wages between the officers of the Rome, Watertown & Ogdensburg railroad, and the engineers and firemen employed by them. It seems that the difficulty arose from the fact that the engineers had been paid at the rate of \$3.31 for runs of 155 miles per day, and the firemen at the rate of \$1.61 for the same run per day. Considering that the average price paid for this work was \$3.50 per day of 100 mile runs, and three and one-half cents per mile for extra miles to engineers, and \$1.75 to firemen for the same runs, the men on the R., W. & O. thought they were entitled to more compensation. Messrs. Arthur and Sargent, after a few interviews with Mr. Parsons, the president of the road, were able to amicably arrange matters and hereafter the engineers and firemen will be paid according to the following schedule which commenced December 1st:

1. Engineers to be paid for the first year of service at the rate of \$3.00 per day. After the first year, \$3.75 per day.

2. Firemen to be paid for the first year at the rate of \$1.50 per day. After that time \$1.87½ per day.

3. Switching engineers to be paid for the first year \$2.50 per day. After that time \$3.00 per day.

4. Switching firemen to be paid \$1.50 per day.

5. The changes in runs which have been suggested by the committee, between Rome and Watertown, and Watertown and Norwood, in place of runs now made from Rome to Richland and return, and Richland to Norwood, will be adopted.

6. The complaint of the committee relative to orders given by train dispatchers for the movement of trains while on the road, will be carefully looked into and properly adjusted.

7. The complaint of the committee relative to being ordered on duty and having to await arrival of train crew after the time fixed for the departure of such train, will be carefully looked into, and if it is found such occurrences happen, they will be speedily corrected.

8. Hostlers will be provided at terminal points, as follows: Utica, Ogdensburg, Rome, Watertown, Norwood, Oswego, Charlotte and Suspension Bridge.

9. Oldest engineers in service are to have the preference in runs, merit being equal.

10. During the absence of Mr. H. M. Britton, or until April 1, 1889, the above terms are to be binding upon the engineers, firemen and railroad company.

The New York *Dispatch* remarks that, "Chief Arthur impresses one as being a cool, clear-headed man, one who can grasp the

subject that he is called upon to deal with, and prove equal to all emergencies. In his hands and under his direction, the B. L. E. can rest in perfect safety. Mr. Sargent has the appearance of a man who knows his business, and his face indicates an iron will. His look is that of one who is able to meet the problems that he is called upon to settle." There is seldom or never any difficulty in arranging such controversies, when railroad officials are disposed to act fairly with their men. Railroad employes seldom make demands without having a just cause, and a free, full discussion always results in restoring pleasant relations.

THAT the members of our Brotherhood who are profoundly interested in the success of the *Magazine* may know the estimate placed upon it by men eminently competent to arrive at correct conclusions, we print the following extract from a private letter received from Angus Sinclair, Esq., editor of the *National Car Builder*, than which no publication in the country has a more enviable position. Mr. Sinclair says: "I have just read the December *Magazine* and must congratulate you upon the highly interesting matter it contains. I am certain you must be doing untold good to the members of your Order by the efforts taken to make them think for themselves." Such generous words from such a source inspire us with fresh courage to labor for our noble Brotherhood. The writers in the various departments have ideas, and though grace and accuracy may not always adorn their contributions, they manage to make the reader understand what they are driving at, and are steadily improving in diction, and as Mr. Sinclair observes, "If a man refrains from giving his views all his life for fear of making a mistake, he is never liable to learn much."

WE have received from Messrs. Theo. Audel & Co. 91 Liberty street, New York, an illustrated, complimentary copy of their books relating to applied science, and the select library of books for engineers. The chapter relating to the six historical engines, giving illustrations of the Branca engine of 1629, the Newcomer engine of 1705, the Watt engine of 1784, the Berethicks engine of 1803, the Rocket engine of 1829 and the Centennial Corliss engine, is exceedingly interesting and well calculated to encourage investigation. The catalogue will be found valuable to those who desire knowledge in the department of applied science, or one in search of valuable information relating to books for engineers. All patrons of this *Magazine* will be furnished a copy of the catalogue gratis by referring to this notice in their application.

SWITCHMEN'S STRIKE.

About the middle of November last the switchmen employed on the various roads centering in Indianapolis, as also those engaged on the Belt road of that city, sought, by a manly presentation of certain well-founded grievances to the officers of the roads to obtain relief. The Indianapolis switchmen claimed, that while performing duties as arduous and as perilous as fell to the lot of men of the same vocation, in other cities, they received less pay. They, therefore, requested such an advance as would place their wages on a level with those paid switchmen in Chicago and other cities named. The Indianapolis switchmen were required to work thirteen hours for a day's work, and to this they objected, and their duties were rendered extra hazardous and laborious by the small number of men constituting a crew. They demanded, therefore, a reduction in the number of working hours and additional men to each crew. The demands were reasonable and ought to have been promptly granted, but the railroad officials, with one or two exceptions, persistently refused to grant the switchmen any relief. It was stated by the officials that while wages at Indianapolis were lower than in some other cities, the cost of living was less, and therefore, switchmen should be content with less wages than were paid elsewhere; while the switchmen contended that any advantages of that character should inure to their benefit, rather than to the profits of the corporations. The small number of men constituting a crew, as we have said, made their employment more laborious and perilous, and if the hours could not be reduced nor the crews increased in number, an increase of pay at least, should have been promptly awarded. But the railroad officials would neither concede, compromise, nor arbitrate. They ignored the grievances of the switchmen. They would not reduce the hours for a day's work; they would not advance wages nor give the crews additional men. They would not meet the Grand Chief of the Switchmen's Association, nor extend to him any consideration whatever. As a result the switchmen struck. It is worthy of remark just here, that every labor organization in Indianapolis was in sympathy with the switchmen, believed their grievances were just and that the railroad officials ought to have conceded something to them. An Assembly of Knights of Labor, composed of carpenters and joiners, resolved that "the unions are in sympathy with the switchmen in their strike and hope for their speedy success." Other resolutions were passed as follows:

Resolved, By Willetts Assembly, No. 4,479, K. of L., that the switchmen of this city, in their attempt to secure from the railroads sufficient compensation to insure them the necessities of life deserve and are entitled to the support of all

men and women who earn their living by toll.

Resolved, That this Assembly hereby extends to said switchmen its support and sympathies in their effort to insure fair treatment and reasonable wages. And be it further

Resolved, That we hereby condemn the railroad superintendents and other officials for their failure and refusal to arbitrate with or meet said switchmen and hear and consider their grievances.

At one time there were indications that the locomotive engineers, and firemen and the brakemen would take a hand in the strike and a joint committee of these railroad employes waited upon the railroad officials, requesting them to arbitrate the questions at issue with the switchmen, but the committee was told, "that if they had any complaints of their own to arbitrate or adjust, the superintendents would gladly meet them to talk over any grievances, but declined to meet the committee in regard to the switchmen's grievance." In this we state about all that was done to enable the heroic switchmen to obtain justice or recognition. It is eminently worthy of remark that the switchmen as a body were totally opposed to anything like violence, and when a wrong was reported as having been perpetrated by some one or more of the strikers, a meeting of the switchmen was promptly called, and the following resolutions unanimously adopted:

WHEREAS, It has come to our knowledge, through the evening papers, of acts of violence being committed on some of the railroads entering the city by unknown persons—

Resolved, That we, the switchmen of Indianapolis, do most heartily condemn the actions of any person or persons engaged in any illegal act, and will do all in our power to bring such parties to justice if any such are reported as being any of our men. Be it further

Resolved, That we sympathize with the business men of the city in the depression of business, owing to a strike of the switchmen, who were compelled to take these steps to exact fair wages and just treatment from their respective railroads.

It only remains to be said that the strike was a failure. After about three weeks of struggle, the strike was declared off by the switchmen and they asked to be taken back, and were peremptorily refused, the officers of the road declaring they would retain in employment the men who had taken the places of the strikers.

The failure of the strike brings into the boldest possible prominence several questions of great interest to railroad employes: First; that with possibly one exception, all the railroad superintendents promptly federated, formed an alliance to defeat the switchmen. They held frequent meetings, and acted as a unit. That was business. It was a success, and nothing succeeds like success. Second; while the railroads combined, the switchmen were compelled to go it alone. They had the sympathy of other railroad employes, kind and generous words were plentiful, but it was all words. There

was a deficiency of deeds. There was a total absence of *federation* as in all such cases, when there is a strike there need be no difficulty in predicting the results.

Switchmen occupy an important position in the railroad service of the country. They are as indispensable as any other class of employés. Their work is laborious and extra perilous. They are poorly paid. The movement on foot is to form a federation of railroad employés to secure justice when injustice is practiced, to avoid strikes by honorable means, to settle controversies by arbitration. In the accomplishment of this wise purpose, there are obstacles in the way, but they are not immovable nor insurmountable. They will disappear. The good common sense of workmen is pledged to the work, and success will ultimately crown their efforts.

An exchange says that "the business indications are that we will have a busy year. but that there will not be that extraordinary rush that we had last year. Machinery capacity has been greatly increased. While we are adding to our population at the rate of 400,000 to 500,000 beings, we are adding to our mechanical energy at the rate of 2,000,000 persons per year, or as much capacity as their labor is equal to. This is why there is a declining tendency in wages of labor. We are turning out more products with less labor, and at less cost." This thing of "turning out products" by the aid of machinery, results in "over-production," and over-production results in suspension of work. The machine stands still, and so does the man who tended the machine. Before the machine stood still, it brought a decline in wages, and when over-production came and the machine and the man were idle, the owner of the machine oiled it, threw a covering over it to shield it from dust, possibly repaired it and put it in good working order, and waited. The man, owing to a decline in wages, brought about by the machine has no money, and still the demand upon him continues. His expenses go on. He, and those dependent upon him, must be fed, clothed and sheltered. If without money—then what? It is not required to be particular, answers come thick and fast—almshouses, prisons, are quick to answer. The army of tramps receives recruits. The machine is constantly making overproduction possible and it inevitably reduces wages. The larger the number of machines, the less demand for worthy men, the larger the army of idlers, and if idleness is the "prolific parent of crime," then, more criminals. Is there a possible remedy? Can there be a practical suggestion in anywise calculated to modify the dangers of the situation? If not, then there are dangers ahead. Would a less number of hours of

work each day be in the line of a remedy? Would it be an easy matter to demonstrate that the less the number of hours the greater the number of men required to accomplish a task within a given time? The machine is forcing the question of limiting the hours for a day's work upon the public mind. It will be well for those who are chosen to look after the public welfare to give this subject special consideration.

We like humor. Bill Nye says it is a necessity as well as a luxury. We find several exceptionally choice specimens in the December number of the *Railway Conductors' Monthly*. It extols in lofty panegyric the Brotherhood of Railway Brakemen. It exclaims, "all honor is due the Brotherhood of Railway Brakemen for their stand," and we add, parenthetically, for their sand. It furthermore vociferates: "To their honor (the Brakemen) let it be said, that they have stood up in their manhood and said that they recognized no man as their master, that they could stand alone and take care of their own interests." Again, the *Conductors' Journal* wishes "the Brotherhood of Railway Brakemen the measure of success which it so justly merits by its *intelligent action*," (italics ours.) This is good, very good; as the Cockney, said of Niagara, "'tis well got up." Every word of commendation spoken of the brakemen is deserved. The *Conductors' Journal* eulogizes the brakemen because it understood that at the Columbus convention of the Order, federation was defeated. It is just here that the humor of the thing comes in. The Brakemen's Convention unanimously indorsed federation and agreed to federate. The convention was bold and outspoken, had the courage of conviction and placed itself on record as a wise, progressive organization. It is in order for the *Conductors' Journal* to rise again and offer a few additional remarks; or, it may be like Bret Harte's Chinaman, who

"Fell down upon the floor,
And subsequent proceedings interested him no more."

THE order has gone forth on the Rock Island railroad, that commencing with December, 1888, every conductor, engineer, yardmaster, train dispatcher, section or bridge foreman, or other officers connected with the operating department of the road, shall carry a watch of a certain standard of excellence, and these watches are to be examined every three months by a person employed by the company. The watch is to be what is known as the "fifteen" jeweled patent regulator, adjusted to heat and cold. It is the desire of the company to avoid disasters as the result of imperfect time keeping.

THE C., B. & Q.

We observe that the B. of L. E., at the Richmond Convention, appointed a committee of nine to take into consideration the condition of affairs on the C., B. & Q. One of this committee was appointed to go over the system, note the situation, etc., and when he reports, the committee determines what shall be done. In this very important movement the B. of L. E. did not deem it wise nor prudent to *coöperate* with the firemen on the system or elsewhere. The B. of L. E. preferred to act singly and alone, as though only engineers had anything at stake. In this we have the first specimen of the much vaunted *coöperation*. If anyone can see it with the naked eye, or with a microscope we would like to have them locate it. Perhaps it is so remotely distant that a telescope would be the better instrument with which to discover it.

The firemen on the C., B. & Q., having concluded to *coöperate* with the engineers have interests as vital as engineers. They sacrificed as much and their sturdy heroism, their fidelity to pledges has cost them hundreds of thousands of dollars, and now, the engineers take action in their own name and in their own behalf, without any regard whatever for the interests of firemen, and a committee of nine engineers, are clothed with the power to continue the strike or declare it off, as to them may seem proper.

As a sample of *coöperation*, the engineers have certainly completely distanced all competition. They are entitled to the blue ribbon. In this we are not particularly disappointed. We had neither underestimated nor overestimated the B. of L. E.'s conception of *coöperation*. We infer that the B. of L. E. understands the word to mean "when we want you, we will call for you." As a result, firemen may hold themselves in readiness, if occasion requires, to pull the chestnuts out of the coals.

By the action of the Richmond Convention the B. of L. E. assumes all the responsibility of the strike. It has taken it out of the hands of the C., B. & Q. men, and nine men, virtually one man, is clothed with power to determine all things connected with the strike, and no fireman is expected to have any voice in the important deliberations.

This *Magazine* has been the friend of all the striking employes on the C., B. & Q. system, engineers, firemen and switchmen. It is still their friend. It does not interpose any advice as to the strike—that is now in the hands of the B. of L. E. by its action which ignored the firemen, but we can speak of other matters, and our advice to the men on the C., B. & Q. system, is to seek for work. In view of all the facts, it is quite probable a warning note should have been sooner sounded, but it is better late than not at all, and therefore we say to the

men, seek for work and avail yourselves of any opportunity to obtain honorable employment.

THE Brooks Locomotive Works are building heavy consolidated locomotives for the New York, Pennsylvania & Ohio railroad. The following description of one of the monsters we find in the *National Car and Locomotive Builder*. "The cylinder of these engines are 20x24 inches, and the driving wheels have 44-inch centers. The boiler is 60 inches diameter at the smallest ring and contains 240 flues 2 inches diameter and 11 feet 6 inches long. The internal length of the fire-box is 11 feet 6 inches, and it is 41½ inches wide. The driving wheel base is 15 feet 2 inches, and the total wheel base 23 feet 7 inches. The weight in working order is 113,500 pounds on drivers, total 128,000 pounds. The tender holds 3,600 gallons and weighs empty 33,500 pounds. The engines have straight stacks and extension smoke boxes, the American steam brake on all the drivers, and all the most approved devices for promoting the convenient and safe operation of the engines. The engines stand very high and have an imposing appearance.

THE *Detroit Free Press* glowingly yet truthfully extols the telegraph operators who have remained at their posts, in the plague-stricken city of Jacksonville while sickness, suffering and death were on every hand, and says "of such stuff the world's greatest heroes are made." And yet the world is advised that certain railroad magnates tell these heroes to whom the world owes a lasting debt of gratitude, that they must renounce their obligations to the Brotherhood of Telegraph Operators, or submit to idleness. They must disrobe themselves of independence and become the mere tools of railroad corporations or pay the penalty of a discharge from their positions. If that is not Russianizing America, please tell what other term will fitly describe the infamous business.

THE statement of the affairs of the C., B. & Q., shows that the net earnings of the system for eight months amounted to \$2,328,926, against \$7,922,857 for a corresponding period in 1887, the decrease being \$5,594,131, and this rate of reduction kept up for the remaining four months of the year, would show a loss to the C., B. & Q., owing to the strike, of \$8,391,165. There is nothing fanciful in the statement, only cold, hard facts are given, but the whole truth is not told by the corporation's financial exhibit. The stock of the company has declined in value many millions of dollars, and its rolling stock has been fearfully damaged. The road no longer has the confidence of the public, and its days of penalty paying are not over.

ORGANIZING NEW LODGES.

It is always a source of satisfaction to the Brotherhood to have a new Lodge organized, provided the motive which prompts the proceeding will stand the test of scrutiny. But unfortunately it is all too often the case that a new Lodge is the outgrowth of circumstances which injure rather than benefit the Order. In many instances the spirit of faction is aroused, and because of disagreement which ought to be amicably adjusted, a few who will not be reconciled to the decisions of the majority threaten to *pull out* and organize a new Lodge. This is all wrong. It is a course that cannot be justified and is always prejudicial to the welfare of the Order. New Lodges should be organized only when there is an unquestioned necessity for them. They should be organized when good men of the right stamp are in sufficient number to maintain the Lodge and make it an agent for the accomplishment of good to the individual members and to the Brotherhood at large. To organize a Lodge and have it linger out a brief, sickly existence, is in every instance a positive injury to the Brotherhood. It evinces a want of those essential qualities of head and heart which secure success. It is desirable that in the future Lodges, as the result of faction, will not be organized. Brotherhood firemen ought to be able to adjust honorably their differences without resorting to a factional *strike*. The Brotherhood is bound by many high considerations to set the example of ability to settle all questions relating to the well being of Lodges without adopting extreme measures. To organize a Lodge from considerations other than those which relate to the welfare of the Order, such as spite or jealousy, can only result in humiliation and injury. Let us have peace and the prosperity born of harmony in all the Lodges.

A NEW RAILWAY GUIDE.

We have received from the Dearborn Publishing Co., Chicago, a book in one volume, costumed in cloth, entitled Nye & Riley's Railway Guide for 1889. The publisher's price for the package done up in cloth is \$1.00, but the inside of the bundle, if wrapped in paper, can be had for 50 cents, showing that the Dearborn Publishing Co. place the same value upon the cover of the book, they do upon its contents. But the eccentricity of the publishers, doing business in a city, noted for its bombastic humor and improved appliances for haltering humanity, in no wise detracts from the voluminous value of the volume, the receipt of which we hereby acknowledge. It is universally conceded, that as manufacturers of wit and humor, Messrs. Nye & Riley stand at the head of all the infant industries in that line in the country. The demand for

their wares is so large that the market is never glutted and as a consequence overproduction is not a vexation that ever confronts the firm. Messrs. Nye & Riley are not alarmed by the introduction of "pauper labor" from Europe, as it requires skilled workmen to give wit and humor that finish and polish which makes it saleable in the home market. Another thing which helps the business of Messrs. Nye & Riley is the large supply of "raw material" to be had in our ocean-girt Republic, said to be practically inexhaustible. In carrying forward their great American industry, we are not advised as to the number of hands Messrs. Nye & Riley employ, but so far we have not heard of a strike, lockout or boycott to disturb the harmonious relation that should always exist between employer and employed, but it is generally supposed, that the co-partners, Messrs. Nye & Riley, do their own work without the aid of a type-writer, telephone or office boy. In the Railway Guide which is the latest production of the firm, there are sixty specimens of their work, each one blazing like a locomotive headlight. These specimens, have been, in book parlance, revised and corrected, that is, polished, sand papered, burnished, made bright and resplendent, and it must be said that the seventy-nine illustrations by the best artists, add indefinitely to the playful and tuneful talents of the authors. As a Railway Guide, the book will be found a thing of beauty and a joy for the entire trip. The table of contents may be referred to as stations, and the traveler will have to be mighty hungry not to find in every instance viands of such richness and rarity, as to satisfy the yearnings of the inner man. The rich and ripe humor of Nye blends with the exquisite fancy of Riley as naturally as the colors of the rainbow. They are men of lovable natures, born to help men and women pleasantly over the rough places in life's pilgrimage, and the Railway Guide is proof positive that they are splendidly fulfilling their mission.

Poor's Manual of Railroads for 1888, says the length of track laid up to the close of 1887, as reported, was 149,913, an increase during the year of 13,081 miles. The gross earnings of all the railroads in the United States, in 1887, amounted to \$940,150,702, and the net earnings \$334,989,119, an increase in gross of \$110,209,866, and in net of \$24,385,555, over 1886. The rolling stock equipment given for the United States is: Locomotives, 27,850; passenger cars, 20,582; mail and baggage cars, 6,592; freight cars, 956,631. For the Dominion of Canada the rolling stock estimated is: Locomotives, 1,517; passenger cars, 1,357; mail and baggage cars, 465; freight cars, 40,692.

A NEW LODGE OF SWITCHMEN.

Wm. A. Simsrott, Esq., Grand Secretary and Treasurer of the Switchmen's Mutual Aid Association, organized in Terre Haute on Sunday, November 25th, E. V. Debs Lodge, No. 66, of the Order. The new Lodge starts out under the most encouraging auspices, having twenty-three charter members. As a body of men, we doubt if any Lodge of the Order can boast of having their superiors in intelligence and full comprehension of the noble purposes of the Association; and that No. 66 will be, in all regards, a first-class Lodge, will not be doubted by those who know the men who have organized it—and the *Firemen's Magazine* wishes the Lodge a successful career. After the Lodge was organized, we had the pleasure of a call from Mr. Simsrott and found him fully abreast of the progressive spirit of the age, and sincerely devoted to the welfare of the Order, and who is doing his full share in giving it strength and influence. Mr. Simsrott is pronounced in his advocacy of federation, as is every other intelligent member of any of the railroad Brotherhoods, and believes that federation is absolutely essential to the well being of men who are engaged in the railroad service.

THE Chicago *Knights of Labor* refers as follows to the rapid rise financially of a number of gentlemen who have held high positions in the organization of K. of L. For instance, Mr. William H. Bailey is a miner. When he gets steady work he can earn \$2.50 to \$3.50 a day. From July 1st, 1887, to October 31st, 1888, he drew from the treasury of the K. of L. the sum of \$4,499.60, as a member of the General Executive Board. Bro. Bailey ought to have taken the other forty cents to make the even \$4,500. "In fifteen months," says the *Knights of Labor*, "Mr. A. A. Carleton, erstwhile a member of the General Executive Board, K. of L., drew from the General Treasurer the magnificent sum of \$5,087.87. Before becoming a Knight of Labor Mr. Carleton was a shoe cutter, earning \$16 a week. It's only by hard work that great men get a start in the world." The *Knights of Labor* further remarks that since July 1st, 1887, Mr. T. B. McGuire, a member of the General Executive Board of the K. of L., passed around the hat to the tune of \$4,110.49. Before being a Knight Mr. McGuire was a truck driver at \$12 a week. Some over sensitive labor reformers would have preferred to open a bank with a crowbar." We are told that "Mr. Ira B. Aylesworth began to take up collections from the toiling masses July 1st, 1887, and by October 31st, 1888, he succeeded in getting \$4,070.80. Before occupying his present position as a Knight of Labor, Mr. Aylesworth was a very good carpenter and earned \$3 a day for

eight months in the year, and the balance of the time set up the pins to capture his present position as a member of the Executive Board. And we are further informed that "Mr. John W. Hayes has spent nearly all his time in Philadelphia since July 1st, 1887. In that time Mr. Hayes has received contributions from Poverty's Box to the amount of \$3,783.68. Before being a labor reformer Bro. Hayes was a railroad telegrapher and earned perhaps \$50 a month. He is now a member of the General Executive Board of the K. of L., and boards himself and wife at a first-class hotel at the expense of the Order." Such biographical sketches are well calculated to arrest attention, and the purpose in writing this for the public need not be mistaken, but it would seem to be only fair to give the reasons why the K. of L. agreed to pay such salaries. Both sides of such questions should always be given.

It has been remarked that the South has been building railroads in excess of the demand but a New Orleans correspondent of the St. Louis *Globe-Democrat* is of the opinion such is not the case. It is shown that Maryland has "one mile of track to 3.18 square miles of territory. The next sixteen States, however, are all in the North and West. New England averages a mile of track to each five miles of area. Ohio one to 5.51 square miles; Pennsylvania one to 5.74 New York one to 6.57. Virginia, which makes the best showing of the Southern States, except Maryland, has one mile of railroad to 15.65 square miles, while Mississippi leads the Gulf States with one to 22.17. The following is the proportion of the other neighboring States:

	Square miles of area to one mile of track.
Alabama	22.91
Arkansas	24.52
Florida	30.59
Louisiana	35.28
Texas	36.43

With these figures before us it cannot very well be charged that the South has built all the railroads it needs and can support. Much has been done in the last eight or ten years, during which time, as we have noted, the mileage of this section has been doubled; but much yet remains to be done before the South has all the transportation advantages it needs and can support. Railroad building in the South is in its infancy, and the work will continue to go forward.

THE *Switchman's Journal* for November, says: "If federation is not an established fact in the near future, it cannot be said that our Association contributed in the least to its postponement." That is true, and the same can be said of the firemen and brakemen.

We have read a communication signed Gaffer Green, who we conclude is, or has been, a railway passenger conductor, because he writes graphically of "Conductors and their duties." According to Gaffer Green, conductors have a hard row to hoe in this life, so hard, indeed, that they ought to contemplate the future state with serene composure. Summing up, Mr. Gaffer Green says:

The conductor, with the care of his passengers and the company's property in charge, is paid \$100 a month by the company. He is expected to buy two new suits a year (suits and caps complete cost about \$40, or \$80 a year). He must stop at a first-class hotel to give the road he represents tone, and to assist him the company pays *spotters* to look after the poor conductor, and if, in all this confusion, the conductor should fail to remit one 25 cent fare, he is discharged and called a thief. The conductor was not born a thief, and if he is one to-day the company is to blame. Pay him a reasonable salary; furnish him the dearest blue suit; take off the spotter and look upon him as a man and not a thief. (Compare the wages paid to ticket agents, traveling passenger agents (\$100 and all expenses, vacations, no time lost, and no responsibility compared with conductors). If necessary to raise the pay of conductors, make a cut in the general offices. Some of them could live on \$20,000 a year or less, while the conductors must live on--well, if I had but a thousand a year.

After reading Gaffer Green through, we conclude the conductors are not so splendidly treated by railroad corporations that the O. R. C. can long be kept in antagonism to the Brotherhoods who demand a more equitable share of the money they earn.

In the grand old days, before the flood, men lived to such an advanced age, that undertakers, or funeral directors, must have found their business unprofitable, as for instance Adam lived 930 years, Seth 912, Enos 815, Cainan 910, Mahalabel 890, Jared 962 years, and Methuselah surrendered after a pilgrimage of 969 years. After the deluge, the time tables were changed and the stations, where travelers could leave the surface train for a sleeper on the underground road have multiplied so that a passenger who reaches the three-score and ten station, on Mount Lookout, is regarded as exceptionally fortunate. But it is held that there are many and valuable compensations for this fast time and short route arrangement and that the average man, who has lived say forty years, has in fact lived longer than Methuselah; liver longer, because he has seen more and knows more than any of the old antedeluvians. Indeed, it is not required to go so far away from the present to illustrate the idea that notwithstanding ours is a fast age, men who die young have lived longer than in any other country, since Adam cultivated Eden. A writer remarks that "the old men of this period, those who come into the world with the present century or a few years after, have seen more material progress than those of any preced-

ing century of which there is any history." In proof of this, reference is made to the "development of the uses of the power of steam alone is suggestive as anything need be of the material progress of the century, but to it must be added the Jacquard loom, the electric telegraph, the cotton gin, the power loom, the screw propeller, the iron and steel ship, the vast march of chemistry, and in the healing art, the sewing machine, the telephone, the plowing, planting and harvesting machines, the Hoe rotary and other multitude power printing machines, the photograph, the "dynamo," the electric light, the electric motor and all those thousand and one mechanical inventions and scientific discoveries which are in active operation to-day, and which were not in practical existence in the year 1800." And it should be added not until long after the year 1800. The first steam vessel crossed the Atlantic in May 1819. In 1825 there was not a mile of railroad in the United States, while now there are 160,000 miles. If life is to be measured by what a man knows or by opportunities for knowing, then it must be admitted that a man of the present who has seen forty or fifty years knows more than any man who ever lived in any of the centuries gone, and if men are disposed to measure life by a still higher standard, opportunities for doing good, it is safe to say that a year of the present is more fruitful of such opportunities than were crowded into any century since God said "Let there be light."

THE *Gazette* has said that since the railway managements offer a premium to those employes who organize labor unions, that no fault should be found with such employes as do so. A telegraphic report is to the effect that the Atchison, Topeka & Santa Fe has notified all employes that salaries are to be reduced 10 per cent., the only exceptions being in the cases of such employes as the engineers and firemen, who belong to organized bodies or unions. This class was exempt from reduction, the reason being, it is said, that it was not thought advisable to court a strike. It is reported the cut covers every branch of the line.—*Railway Service Gazette*.

Admitting the "telegraphic report" to be correct, what must be the inevitable conclusion of employes in every department of railway service? We presume the brakemen and switchmen on the A., T. & S. F. are organized, and we do not see why they are not included in the exemption from reduction. Trains can't run without brakemen and switchmen any more than they can without engineers and firemen, and if these Brotherhoods were federated as their best interests demand, sweeping reductions would not occur.

A GRAND union meeting will be held at Parsons, Kas., on January 18th, which will be addressed by Grand Master SARGENT. A cordial invitation is extended to all members of the Order to be in attendance.

THE switchmen employed in the New York Central yards at Buffalo, N. Y., recently presented to the officers of the road, certain grievances which they regarded of sufficient importance to require action. They placed the matter in the hands of the Grand Officers of the Switchmen's Mutual Aid Association, and the result was an amicable adjustment of the matters in controversy. On November 28th Grand Organizer and Instructor George S. Baily, George Goron, of the New York Central; Martin Barrett, of the West Shore, and Robert Burns, of the Jersey Central, had a conference with President Chauncey M. Depew at his residence. There were present General Manager Tousey, Assistant Voorhees and General Manager Layng, of the West Shore road. The Chicago rates for switchmen (who make up and break up trains in the freight yards, not switch-tenders) are \$70 a month for foremen or conductors, \$65 for day helpers, \$75 for night foremen and \$70 for night helpers. Ten hours constitute a day's work and twenty-six days a month's work. After a long discussion a compromise was reached by which day foremen are to receive \$65; day helpers, \$60; night foremen, \$70; night helpers, \$65. Eleven hours to be a day's work and twenty-six days a month's work, extra to be paid for Sundays. Such reports of settlement are alike creditable to employer and employé. Railroad employés, so far as we are informed, never trump up grievances, and when a fair hearing is given them, they secure substantial benefits, by granting which, railroad officials evince a purpose to deal justly with their men.

THE agreement entered into on the 1st day of November last, between the officers of the Missouri Pacific Railway Company, and the St. Louis, Iron Mountain & Southern Railway Company, and the Brotherhood of Locomotive Firemen employed on the roads named and the leased and operated lines of said roads, is probably the most perfect thing of the kind extant. For a long time there had been complaints and serious unrest on the part of the firemen on the roads named, and as early as January, 1888, an effort was made to have matters fairly adjusted. The troubles on the C., B. & Q. interfered, and the Vice-President of the roads, S. H. H. Clark, suggested a postponement of the matter till certain difficulties then in the way, should be removed, promising that then attention should be given them. This pledge was faithfully kept, and in November last, the conferences required were held between Mr. A. W. Dickinson, General Superintendent Missouri Pacific, Mr. R. E. Ricker, General Superintendent St. Louis, Iron Mountain & Southern railway, and Bro. A. Dillon, Chairman Joint Board of Ad-

justment, and Mr. John O'Connor, Secretary and Treasurer Joint Board of Adjustment, acting for the firemen. The conference resulted in bringing about a settlement of every question in controversy, every agreement being sharply defined in thirty-eight paragraphs, signed by Messrs. Dickinson and Ricker for the roads, and by Bros. Dillon and O'Connor, and the other members of the Board of Adjustment for the firemen, approved by Mr. Clark, the First Vice-President of the roads. The schedule of pay rates agreed upon is as follows:

For eight-wheeled passenger engines, \$2.00 per day or 2 cents per mile.

For eight-wheeled freight engines, \$2.25 per day or 2½ cents per mile.

For ten-wheeled or Mogul passenger engines, \$2.20 per day or 2½ cents per mile.

For ten-wheeled or Mogul freight engines, \$2.30 per day or 2½ cents per mile.

For consolidation engines, \$2.40 per day or 2½ cents per mile.

For switching engines, \$1.85 per day or \$55.00 per month.

For pushing or helping engines \$2.00 per day.

Too much credit cannot be given to Bro. Dillon for the manner in which he conducted the business. The interests of the Firemen were protected throughout, and the agreement is to remain in force, except on three months' written notice from the firemen, or from the First Vice-President, Mr. Clark.

THE C., B. & Q. announcement of appointments on that scab-cursed system is as follows: Mr. L. E. Johnson, superintendent of the Chicago division, vice Mr. George Alexander, assigned to other duties; Mr. E. M. Herr, superintendent of the St. Louis division, vice Mr. L. E. Johnson, transferred; Mr. W. W. Nichols, superintendent of telegraph, vice Mr. E. M. Herr, promoted. Stone has been made vice president. The term vice as applied to an official means second, next in order to the president, etc., but the term in its other signification applies to Stone with eminent fitness.

SPEAKING of skilled workmen we note in the *New York Dispatch* that "Engineer Tom Bressett, who runs Engine 656, on the Harlem R. R., is counted as one of the best and most reliable men on the road. He has been handling the throttle only two years, but previous to that time he must have proved himself a good fireman, for during his time as such he paid close attention to business, and when given a throttle, he knew how to use it." Such statements emphasize the fact that locomotive firemen acquire the skill to run engines, while they are firemen. The man who does not see it is wilfully blind.

THE *Gazette* is not a party organ, and while it does not throw up its hat and shout for the Democratic party, or the Republican party, or the Prohibition party, or the Labor party, and while it does not march in processions, and howl at the heels of any set of small party leaders, bummers and blackguards, whose general "cussedness" is only surpassed by their cheek and their impudence, we are willing to admit that political parties are necessities, but in the language of a once noted politician, "like skunks, mosquitoes and other vermin, they are d-d bad necessities."—*Railway Service Gazette*.

Parties are absolute necessities, and it ought to be a matter of universal congratulation that at last a "Labor party" has made its appearance. The "skunks, mosquitoes and other vermin" in no wise abate the necessity of parties. Parties are the outgrowth of free speech, and a free press. Strike down American freedom, and the result might be an imperial party *a la* Russia or Turkey. The fact that there is a "Labor party," though yet in its infancy is a promise of good. It means ultimately justice to workmen, and therefore the triumph of things of good report. The Labor party of the United States, once in the ascendancy, or in a position to influence legislation, will sound the death-knell of certain outrages perpetrated by men who, like Ives, the "Young Napoleon" of finance, "keep well within the law." Political parties are a necessity. They act as checks upon each other. Being made up of human beings they are not perfect, and require watching. Political parties have existed since the date of the landing of the Pilgrims, and under their sway, good or bad the country has prospered. The country is now confronted with conditions which demand a Labor party, and it has come, and come to stay. We hail its coming with undisguised satisfaction.

IN November last the Governing Committee of the New York Stock Exchange ordered the following securities placed on the regular list: Mexican National Railroad Company, \$10,500,000 first mortgage bonds, \$12,265,000 second mortgage bonds, series A, \$12,265,000 second mortgage bonds, series B, and \$33,350,000 capital stock; St. Paul, Minneapolis & Manitoba, \$8,000,000 collateral trust bonds, \$1,000,000 additional consolidated mortgage bonds, and \$468,000 additional first mortgage 6 per cent. bonds; Pittsburg, Painesville & Fairport railway, \$1,000,000 first mortgage bonds; Cleveland & Canton railroad, \$483,000 additional first mortgage bonds; Richmond & Danville railroad, \$200,000 additional consolidated mortgage bonds, a total of \$66,566,000 entered for sale in one day. It occurs sometimes that transactions on the New York Stock Exchange reach a sum total of \$100,000,000, and on such days the bleatings of the shorn lambs can be heard from New York to San Francisco.

THE *New York Dispatch* remarks that "D. W. J. Mahoney, the secretary of Adopted Daughter, No. 3, B. L. F., is another of the throttle handlers who would not give up his mother lodge to join the B. L. E. He also hails from Enterprise Lodge, No. 48, F. & A. M., celebrated all over New Jersey as a first-class lodge. He also admits to membership in Jersey City Lodge, No. 24, I. O. O. F., and to cap the climax he is the chairman of the Committee of Arrangements of the ball which "Adopted Daughter" is to give next February, and added hereto is the fact that he is an intelligent man and an excellent engineer." Manifestly Bro. Mahoney, has the courage of conviction, and that he has the right sort of convictions, is quite as evident.

THE *Conductor's Journal* does us the honor of mentioning our name in connection with the address delivered before the Brakemen's convention held in October last. We confess that we had the "gall" to believe the convention would favor federation, not "without a moment's notice," but after mature deliberation, and we were right. We estimated the "intelligence" of the brakemen high, but there was no over estimate. As a result of it all we are entirely satisfied. We were appointed by the B. of L. F. to attend the brakeman's convention; besides we received a royal invitation from the brakemen to be present and to address the convention. We were armed with credentials of a high order. We had a most delightful visit. If that is "taking the cake" we had enough offered us to even sweeten the bitterness expressed by the *Journal*. Come over and take a slice.

It is reported that the Brotherhood of Locomotive Firemen at their recent annual Convention at Atlanta, Ga., have approved the proposed plan of federation, which is to unite for more harmonious action the various railway labor associations. Chief Arthur, of the Engineers, who attended the Firemen's Convention, is said to favor the federation plan. If the federation schemes should be successfully inaugurated, all classes of railway employes will eventually be represented in it. That will follow as an inevitable result.—*Railway Service Gazette*.

The "federation scheme" is certain to be inaugurated. It is a common-sense scheme. It has right and justice on its side. It means an era of fair play. It is in consonance with the growing enlightenment of the age. It bears convincing testimony that labor's winter of discontent is drawing to a close—that its sun is rising to meridian power. There is not one legitimate argument against federation—there are a thousand in its favor—and "all classes of railway employes will eventually be represented in it," and the Brotherhood of Locomotive Firemen will be entitled to everlasting gratitude for having set the federation ball in motion.

GENERAL MASTER WORKMAN POWDERLY in his recent address to the representatives of the Order said:

The most important questions that can come before this body for consideration are those of finance, land and transportation. These great questions are up before the people for discussion and solution. They must be settled by the people, for it is not the interest of politicians to do so. Those who control our public highways are reaching out with the hand of steel to grasp and control the government itself, and it is indeed a battle for supremacy. If the masses remain idle and indifferent these classes will rule through the power which comes to them through bonding railway and land monopolies. It is therefore a duty which we should not neglect to select the questions which I have pointed out and place them prominently before our members for discussion.

It is not required that anyone should indorse Mr. Powderly's dictum as to the "most important questions" to be discussed by the working people, and we doubt if "finance, land and transportation" are the most important questions relating to the welfare of working people. But, be this as it may, they are political questions of great gravity. Men will take widely divergent views regarding them, and thus political parties are formed. If matters as they now stand, are wrong, the right can only be made triumphant by the success of the party which favors the right. In all of this what is to be seen degrading in politics? And yet, nothing is more common than the denunciation of politics and politicians. Politics is the science of government, and the most renowned statesmen are the men who are the best versed in politics. If Mr. Powderly is competent to map out a policy for the Knights of Labor, calculated to improve the condition, it is because he is a more thorough politician than any other man in the Order. If labor is to achieve any triumph in legislation by which just laws are placed on the statute books and unjust laws are repealed, it will have to be accomplished by a political party without reference to a name, and the fact that there are vicious men in politics has nothing to do with the matter. There are vicious men in all parties, in all organizations—even the church is not exempt. There is a Labor party. It is political because it proposes to deal with governmental questions. To denounce the party because there are designing men in it would be equivalent to denouncing the religion of Christ because Judas Iscariot was a traitor.

A STATEMENT of the Pullman Palace Car Company's receipts and expenditures for the year, made at the annual meeting held October 11, 1888, was as follows: Receipts, \$7,509,754.97. Expenses, \$5,494,193.09. Surplus for the year \$2,015,561.29. The statement says the company has built and placed in service during the year 147 sleeping, parlor and dining cars, costing \$16,382.43 each, or an aggregate of \$2,408,217.21. There are

now under construction ninety cars, the estimated cost being about \$17,000, each, or an aggregate of \$1,530,000. These cars, with the eighty-five purchased of the Baltimore & Ohio and the 147 built during the year, will make a total of 322, an addition of about twenty-five per cent. to the total equipment in service July 31, 1887. The total number of persons employed is 10,530 and the amount paid out for wages during the year was \$5,516,201.55. The statement shows that the total number of cars employed in the service is 1,420; the number of passengers carried during the year, 3,482,006; the mileage of the cars, 120,801,807. The total mileage of railway covered by contracts for the operation of the cars of this company is 106,131. The value of the manufactured products of all the car works of the company for the year was \$8,704,949.08; other industries at Pullman belonging to the company, including rentals, \$2,118,276.10; a grand total of \$10,822,225.18.

The town of Pullman, Ill., has a population of 10,710 and the savings deposits of the employés of the company amount to \$262,157 and the number of depositors is 1,150. Pullman is a thriving town and a good place were should think to work, live, grow old and die in.

BROTHER CHAS. COWDRICK, No. 221 East 126th street, New York City, has on hand 1,000 copies of the Programme of the First Biennial Convention of the B. of L. F., which he desires to dispose of as early as possible, and offers special inducements to purchasers. Any person sending him postage stamps to the amount of 50 cents will promptly have a copy of the *souvenir* mailed to his address, and Lodges of the Brotherhood can have them upon the same terms. The book is beautifully bound and contains a concise history of the Brotherhood, together with biographical sketches of the Grand Officers of the Order, together with admirable engravings of each. The book makes a beautiful center table ornament, and as it is now offered at the nominal price of 50 cents should be in the possession of Brotherhood Fireman.

THE order of the Knights of the Golden Eagle was organized in Baltimore, Md., Feb. 6, 1873, and is now established in twenty-seven States and Territories. It has for its motto, "Fidelity, Valor and Honor." It has three degrees, 1, Pilgrims; 2, Knights; 3, Crusaders. It is semi-military in its methods and is organized with its supreme and subordinate castles, and has for its aim "that of a Christian warrior struggling for an immortal crown." We wish the Golden Eagles such sublime flights as will keep their plumage forever bathed in the sunlight of prosperity.

SELECTIONS.

HOW TO BECOME A MECHANIC.

Wood and Iron.

Perhaps no question in the whole range of mechanics is asked with so much earnestness, and usually receives so meagre a reply, as that from the young man who asks: "How can I become a good mechanic?" In nearly every case the young man asking this question feels that the circumstances surrounding him absolutely prohibit the idea of his attendance at any of the technical schools, and in his despair of finding any way himself, he turns to the editor of some mechanical journal. Too often he is told to read such and such a book, regardless of the fact that the reading of no one, or a dozen books, or a hundred books, will make a mechanic of him.

As one who has been compelled to get all of his mechanical information without personal assistance from any one, it may not be out of place for us to outline such plans as have been of the most help to us. The best of all mechanical educators of to-day is the mechanical journal. Let the young man who wishes to become a mechanic subscribe and pay for one or two such journals as have a special bearing upon what he wishes to learn. We say pay for it, because there is a moral influence of having paid for what he is getting that will cause him to obtain more real information from one journal so obtained than from a dozen which may be given him. Each number should be read carefully, and every article studied so thoroughly as to be certain that there are no points not understood.

Nor is that all; each statement made should be carefully compared with every day experience, and when items of information are conveyed that have no direct relationship to his present surroundings, he should enter upon experiments, or carefully retain the remarks until he can find such an opportunity. It is by the careful comparison of others' statements with one's own practical experience that the best and truest knowledge of mechanics comes. Books on various subjects are also of great advantage to the young mechanic; in fact, they become a necessity, if he wishes to develop far in mechanical science; but as a great number of minds are wiser than any one mind, so is the technical journal, which is the reflex of many minds, better than the book, which is the reflect of only one mind.

On the practical side of the question the young mechanic should carefully study the machine with which he comes in daily con-

tact. A long time spent in the study of a single machine may seem like a waste of time to the beginner, but if he thoroughly understands but one machine, he has traveled a long road towards the comprehension of all machines. By the understanding of a machine is meant not only the understanding how it operates, but how it is made, the thickness and kind of metal, the size of bolts, the proportions and general arrangements of parts. The best way to go about the study of a machine is to carefully make a set of drawings of it, letting everything in the drawing be of the exact size and proportion that it is in the actual machine. Having made the drawing, the next study, and the one that will give the test to native ability, is to locate in the machine the amount, kind and direction of the strains that come upon it when in operation, and see if the proportions are in true relationship to these strains.

If he finds in his work what are apparent weaknesses in the machine, let him then carefully watch it in operation, with every nerve on the alert, and see if he can detect these as actual weaknesses. If this work is made and studied out faithfully, without the assistance of any one, it will be of vastly more benefit to him than anything he could possibly learn in a college. Having extracted all the information possible from the first machine, let him take another of a somewhat different class and go through it in the same way. A comparison of the strains and proportions in one machine to the strains and proportions in the other will give him some idea of the latitude exercised by designers. If the young man has the true mechanical instincts, this investigation will have an absorbing interest to him, and he will see a wide vista of thought opening up before his mind, which in after years will bring forth good fruit.

Such work is not impossible or even hard for the young man who has to work ten hours a day for his living. If he has any real desire, real ambition to become a good mechanic, his spare moments, morning, noon and night, will be turned upon his investigations, and even in so short a time as a few months he will find that he has made wonderful progress. The watchword of advance is, think. Think in all times and places. Remember that one hour's earnest thought upon a subject on which you have been reading is worth ten extra hours of reading upon it. The mechanic who will persistently study and think on his business will not down. He will certainly come to the front even though he were confined in the walls of a prison.

It is asserted that the Inter-State Commerce Commission will declare any movement on the part of the railroads to inaugurate a pool illegal.

A TRAIN ROBBER'S RECORD.

Globe-Democrat.

Dispatches from New Orleans announce the arrest of J. Leon Pound as an accomplice in the recent train robbery near New Orleans, as well as that of a woman named Cora Ellis, formerly of Tyler, Tex., who has for some months been known under the dual names of Mrs. Girard and Mrs. Bunch. Both parties allege that the chief of the gang which perpetrated the robbery is E. F. Bunch, a party well known in Dallas, and, in fact, throughout north Texas. The woman was captured on November 13, and upon her person, sewed up in her clothing, was found \$1,300 in greenbacks, which she alleges Bunch gave her immediately after the robbery.

Few men have led a more adventurous career than E. F. Bunch. Born in Noxubee county, Miss., he entered the Confederate army at the early age of sixteen years, and by conspicuous daring and bravery, soon won his straps. At the close of the war he migrated to Amite, La., where he taught school, but, becoming involved in some trouble, he pulled up stakes and immigrated to Texas, settling in Cooke county, where he continued to follow the profession of a teacher. Bright, intelligent, with polished manners and insinuating address, he soon established himself as a popular favorite, and almost before he had acquired citizenship, he was elected county and district clerk. He held the office for two terms, and then disposing of a handsome landed property which he had accumulated, moved to Wichita county, in the Panhandle, where, for a brief period, he engaged in the publication of a newspaper at the county seat.

Throughout all this time he was regarded as a model citizen, upright in his dealings, temperate in his habits, and peaceable in disposition; but now and then wild stories of dissipation and high old larks, which received no credence, were put in circulation, and in his new home as in his old home Captain Bunch was esteemed one of the best citizens.

One of the stories was to this effect: "Bunch, while on his way to St. Louis, became intoxicated at Texarkana, and struck a negro porter over the head with a six shooter. He was arrested by the marshal and placed in the calaboose, but on searching him the marshal carelessly overlooked a revolver Bunch had concealed under his vest. As he stepped inside the cell, he drew his weapon, and, covering the marshal with it, compelled that official to change places with him. Turning the key upon the imprisoned official, Bunch coolly walked to the train which was just then ready to start, and stepping aboard, continued his journey un molested."

About eighteen months ago Bunch removed from the Panhandle, but he gave no intimation as to his future location. He was seen frequently at Dallas, Fort Worth and other prominent railroad points, and when the train robbery occurred at Benbrook, in June 1887, certain circumstances led the officers to suspicion Bunch as one of the parties concerned in the affair. Whether justly suspected or not, it is an open secret. But immediately after the robbery Bunch appeared in Dallas and Fort Worth, in both of which cities he lost large sums of money at the gaming table, and frequently boasted there "was plenty more where that came from."

A story was current at the time that Deputy United States Marshal Lum Johnson entered the Glen Lea saloon, where Bunch was drinking, and attempted his arrest upon papers issued by a United States commissioner, but that Bunch declined to submit to arrest, and openly boasted that there were not deputies enough in north Texas to arrest him, at the same time striking Johnson. Whatever truth may be in this rumor is not known, but it is known that Bunch had several interviews not only with Deputy Marshal Johnson, but also with General Cabell, United States marshal.

"Bunch is a living curiosity," remarked a gentleman to a reporter to-day. "I had occasion to sleep in the same room with him some months ago, and was surprised to see him unbelt two navy sixes and a Bowie knife before retiring. Expressing my surprise that a private citizen would go so heavily armed, he remarked that a man who had passed through what he had had good reason to make a walking arsenal of himself, and with that he stripped his undershirt. The sight that presented itself was a curiosity. The man had been literally cut and shot to pieces. His back and breast were a solid mass of scars from wounds received in battle and personal affrays. A dozen times or more he has been shot through and through, while there was scarcely an inch upon his breast and sides but what bore the mark of a knife or sabre."

The conundrum now is: Will they capture Bunch? He is a desperate man and will not be taken without a struggle. He has a brother residing in the Indian Territory, and it is supposed that he is making for that haven of the wicked. Once there he can bid defiance to any ordinary posse of officers and hold the fort against his enemies.

Bunch is about forty years of age, weighs about 180 pounds, and is tall and well proportioned, with dark hair and red mustache. He dresses well and is an interesting conversationalist, and will pass as a clever gentleman in any company into which he is thrown.

PRESIDENTIAL BABIES.*Philadelphia Record.*

There are more than 300 Harrisons residing in Philadelphia, but previous to the Chicago convention a solitary upholsterer was the only Benjamin among them. Since the Hoosier statesman was nominated the Harrison family in this city has increased somewhat, and nearly every Harrison who has first seen the light of day since that event has been christened "Benjamin." So far as the registrar of births and deaths has been informed there have been no baby Harrisons of the male persuasion born in the city since the election, but the list of other babies christened after the president-elect is a long one. The clerks who register the births in the board of health office kept a tally of the "Harrison" and "Cleveland" babies previous to the election. Curiously enough the records show that the two candidates ran neck and neck in the race, eight proud and intensely Democratic parents having given their babies the benefit of the president's name as a prefix, and eight equally enthusiastic Republicans having named their new-found blessings after the then Republican candidate and now president-elect.

Reports in the local papers in the country districts show that since election day the "Benjamin Harrison" baby has appeared, as Colonel Tom Ochiltree, the distinguished Texas statesman, would say, "very numerous." Nearly every country paper contains a list of birth announcements, in which the babies who have been christened after the president-elect have a large plurality. The Grover Cleveland baby has almost disappeared, but there is no evidence of any waning of the popularity of the president's wife among the mothers of Philadelphia and the surrounding country. Within the past two months a score of girl babies in Philadelphia have been christened "Frances Cleveland."

It is not improbable that there is to be a lively dispute among the parents of the "Benjamin Harrison" baby as to which was the original. The records will show, of course, the priority of registration, but the claim will be made that the first christened and not the first recorded is entitled to the bun. It has been suggested that the president-elect be asked to decide this interesting question. A personal friend of Mr. Harrison who was in this city yesterday, said that next to letters of advice upon how to form his cabinet, the most numerous class of letters received by the president-elect consists of epistles of notification from fond parents that their latest joy has been christened "Benjamin Harrison ———." This gentleman said that some waggish friend had suggested to Mr. Harrison to purchase a carload of chestnut bells, one of which could be sent to the parents of each new Harrison baby.

The president-elect, however, was too long-headed a politician to accept such advice, and will no doubt send a neat little note to each mother if his supply of paper shall prove adequate to the demand.

AFRICAN CANNIBALISM.*Drake's Magazine.*

Colonel H. P. Johnston, the British Consul at Cameroon, estimates the cannibal population of Western Africa, at more than three millions. In the delta of the Niger, on the lower Cross River, on the lower Congo and its southern tributaries, and all along the Bay of Biafra, human flesh forms an occasional or staple article of human food. On his trip to the Cross River settlements he saw a smoked human ham dangling among bundles of dried fish and similar items of household provender, and a pious looking old native presented him with a necklace of human knuckle-bones. The Feejee Islanders and the natives of southwestern Borneo indulge in cannibalism whenever they can evade the suspicion of their Caucasian neighbors, and sporadic cases of a similar *penchant* have been observed in Celebes, and even in northern Africa. In the neighborhood of Sidi Belbez, Algeria, a troop of roving Bedouins a few years ago caught a countryman of their own in the act of roasting a human body, but contented themselves with giving him a good thrashing; and not long after caught the same offender again *in flagranti*, but let him off because his victim had been only a foreigner.

CHINESE WAYS.*Family Reader.*

The methods which the Chinaman adopts to defend himself against cold are not without a certain value as aids to the reading of his mind. We put wooden floors in the rooms of our houses for others to walk on as ourselves. A Chinaman puts a two-inch sole on his shoe, and thus makes sure of a piece of floor under his own feet. If driven by cold to the use of fuel, he does not like a fire for the sake of the family at large, but puts his red-hot charcoal balls into the metal vessels he uses as a footstool, and into the smaller ones which he carries in his capacious sleeves for the warming of his hands. A Chinaman, naturally portly, is a sight in the cold season; while a little child clad in his winter clothes becomes a most comical object. He cannot get his arms down to his side; they stick out horizontally; and should he fall, he is as incapable of getting up again as an overturned turtle or a mislaid sheep. However, he is Chinese, not English, so he wastes no strength in vain strugglings; he lies where he falls, calmly and contentedly, with his four limbs in mid air, till some passerby thinks it worth while to pick him up.

SAVE BY KEEPING ACCOUNTS.*London Reader.*

If all men, whether engaged in business or acting as employes and receiving salaries of daily wages would keep a regular account with themselves, in which should appear in detail all the money they receive and all they expend, they would live more wisely, and, as a rule, far more successfully. Here, for example, is a man who is in receipt of a salary. This salary he receives in twelve monthly payments. Let us suppose him to keep an account with himself. When he receives a monthly payment he charges himself as a debtor to that amount, and during the month he credits himself with all he pays out, item by item. At the end of the month he settles this account with himself, and sees on paper just where his money came from and just where it has gone. If he has spent less than he has received he carries the surplus forward to the next month, and keeps an account of the month in the same way, and thus continues for the whole year. At the end of the year he can look back over the whole period, and see in black and white just how he has lived in the matter of personal and family expenses. If his whole salary was spent he can see how it was spent; and if a part of it has been saved, he can equally see how he managed to save it.

FAST LOCOMOTIVE RUNNING.*American Journal of Railway Appliances.*

The New England Railroad Club at its late meeting, considered the subject of quick journeys and fast running. While the importance of maintaining a steady speed for a long distance, rather than an occasional burst of excessive speed for a few miles of clear road, to be slackened at a dangerous or unprotected crossing, was generally enforced, much of the discussion turned upon the comparative weight of American and European trains. One member of an analytical turn of mind pointed out that the permanent way might be the weak future, and that while the weight of engines and rolling stock had been greatly increased, the rails and roadbed had not been correspondingly strengthened. In regard to high speed, J. B. Barnes, superintendent of motive power of the Wabash railway, is said to have expressed himself to an interviewer as follows: The surprising feats of fast running recently made by railroad trains has prompted an interesting discussion in the newspapers and in railroad circles of what may be the possible limit of speed at which a railway locomotive may be made to travel. Theoretically there is no limit, practically there is; but that practical limit is not within 100 miles an hour. I hold that speed can be attained if the machinery and the track be sufficiently im-

proved, and by means that locomotive builders and railroad men well understand. In the first place the engines would have to be of the compound construction and drivers would have to be at least eight feet in diameter. But no attempt, I apprehend, will ever be made to run passenger trains at such frightful speed. It would involve a revolution in railroading so complete and radical as to make the idea preposterous. Besides, it is doubtful whether passengers would be found willing to outride the gales; or engineers could be found cool enough to be intrusted with the management of locomotives on such trips. Still we cannot say what will happen. Not long ago we used to consider sixty miles an hour a pretty good pace on the Wabash, but we are now running seventy-five and even eighty miles an hour in spurts. One evening last week engine No. 1571 pulled express train No 42, made up of eight heavy day coaches and sleepers out of East St. Louis at the rate of seventy-two miles an hour, and this pace was kept up for eleven minutes. I have myself driven locomotive 1051 at the rate of seventy-three miles an hour. Superintendent Stevens was on the train and timed me. The question is beginning to resolve itself into this: "Not how fast can passengers be pulled, but how fast dare we ask them to ride?"

THE INFLUENCE OF THE UNITED STATES.*Reynold's Newspaper.*

The United States is not only the foremost nation on the earth, but it is the type of the nationality of all future nations, and the nearest approach to the ideal of self-government that, since the dawn of civilization, philosophers, poets and statesmen have dreamed of. A century of republicanism has done infinitely more to dignify citizenship than the thousand years of monarchy and imperialism that make up the history of the Old World. In what country of Europe or Asia, where the light of citizenship has broken, are there not tens of thousands of patriotic souls, inspired by the glorious examples of freedom and self-respect that the United States has set up, and who are sowing the seeds of political independence in their own lands that will sooner or later ripen? The time is not yet, but it is fast approaching, when monarchy, imperialism, and the countless evils they generate, will disappear, and people all the world over take the power into their own hands, using it for their own ends. Self-government, whether, as in the States, through individual forces, or as in the dreams of Lasalle and the socialists, is the Future of Nations; and in the making of that future the immeasurable success of the United States of America will have had the most potent influence.

KRUPP AND HIS SECRETS.

A draughtsman, who had been twenty-five years in the service of Krupp, at Essen, had received several pecuniary rewards from him and was in his confidence, has just been arrested for offering his services to Messrs. Armstrong, Mitchell & Co., in which case he would have divulged Krupp's manufacturing secrets, against which offence a law is in force in this country. As might be expected from such a firm as the Newcastle one, supposing even this man could have enlightened them, they ignored his letter and enclosed it to the Essen firm. He has been let out of prison, but will be tried before a criminal court.—*Letter from Germany.*

Imprisonment for such an offence would seem to us to be a strange proceeding, especially since our railway clubs and master-mechanics' associations are formed largely for the purpose of exchanging shop secrets. Not so with the Krupp works; the gates of the Essen shops do not open to every caller. Admission is positively refused to all metal workers. There are processes, the result of several generations of experience, which are kept secret, on the ground that they regard the experience gained in a lifetime of incessant work and unparalleled activity such as Krupp's as a precious possession, and to allow the keen glances of rival manufacturers an opportunity of noting and appropriating the fruits of such life-long labors and experience would be silly and weak, and against the interests of thousands who are dependent on the works for their living. This is not the American idea; we believe in the greatest good to the greatest number, and if all would publish their secrets and compare notes the chances are that those who have pet secrets would get more than they give, and also find that many points on which they were still experimenting had long since been solved by others. Recognizing this fact, the American Society of Mechanical Engineers at their late meeting in Scranton propounded the following query: "What experience and phenomena can you describe as to the conduct of steels under the conditions in which you are using them?" From facts brought out in answer to such questions better theories will soon be deduced and all classes of metal workers will be benefitted.—*American Journal of Railway Appliances.*

PENALTY AND REFORM.

Christian Weekly.

Our prison system ought to be both punitive and deterrent. It ought to be such that it will not multiply the evil that it seeks to control. The community is in danger of being led into indifference in regard to this matter from the fact that very great reforms have been wrought in externalities. The construction of prison buildings has been improved; there has been great progress in the humane treatment of prisoners under

sentence. So people in general have come to think that there is very little more that needs to be done. There are several things that are essential in this matter if crime is to be controlled and the number of the criminal class reduced. In the first place, we must have regard to cutting off the sources of the supply of criminals. In other words we must educate the children, especially those who by the circumstances of their birth are predisposed to crime, so that they shall shun crime. It will be found far cheaper in the end to educate the children—in morals as well as in intellect—than to deal with criminals. It is far easier to extirpate nascent crime than to deal with full-blown crime. For another thing, work must be provided for the prisoners in our penal institutions. The demand of the so-called labor reformers that prisoners should not be employed in remunerative labor ought never to have been yielded to. Having been granted, consent ought now to be revoked. The third essential thing, in our judgment, is the subjection of actual criminals to such discipline—labor and instruction—in the prison as is fitted to change their habits, and the detention of them till they are pronounced by competent authority, fit to be dismissed.

A SUBTERRANEAN LAKE.

Globe-Democrat.

Two miners, named Robbins and Bunch who are operating in the Huachuca Mountains, near Tombstone, and who are in the habit of sending their ore to El Paso smelters for treatment, have made an interesting discovery near Ash Canyon, in those mountains, and about 1,500 feet west of Ash Canyon Spring. While following the outcroppings of a lode of mineral which they were able to trace along the surface, and while displacing some boulders and loose rock at a point where the indications of mineral were quite pronounced, they found signs of work having been done by human hands. Half an hour's work revealed to them a cave, having apparently no natural outlet to outer air, but to which an artificial entrance had at one time been made at the spot that they had accidentally stumbled upon. The bottom of the cave is covered by a lake, the water of which is of the utmost purity. The cave is of unknown extent, and owing to the difficulty of exploration the discoverers examined it only for a distance of 300 feet. Around the edges of the lake human bones and a quantity of ancient pottery were found. The roof of the cave was entirely dry, with no signs of stalactites, and the air very cold. The sheet of water has been named Lake Huachuca, and endeavors will be made to have the cave thoroughly explored at an early day.

MATERIAL OF BOOKS.*Magazine of American History.*

If we of this stirring generation were suddenly jolted backward to the time when the art of writing consisted in painting with different kinds of ink, or when events were recorded by planting trees or throwing stones into piles, we should begin to appreciate our current privileges. Visitors at the British Museum are often entertained by the examination of specimens of the earliest modes of writing on bricks, tables of stone, ivory, the bark of trees and the leaves of trees. In the Sionian Library is a nabob's letter on a piece of bark about two yards long, and richly ornamented with gold. There are also several copies of the Bible written on palm leaves. The ancients appear to have written on any leaves they could find adapted to the purpose. Hence the name of leaf, of a book, referring to a tree was derived. The Babylonians made their contracts of business on tiles or broken pots. The treaties between the Romans, Spartans and the Jews were written on brass. The speech of Claudius, engraved on a plate of bronze, is preserved in the Town Hall of Lyons, in France. There are wooden manuscripts which must have existed prior to 1423. In the shepherd state people wrote with horns and awis, then they invented an iron bodkin. After that the stylus came into use, made sharp at one end to write with and blunt and broad at the other for effacing and correcting. But the Romans found these sharp instruments dangerous, as vicious persons used them for daggers. A schoolmaster was killed on one occasion with them in the hands of his own scholars.

THE INTER-STATE COMMERCE LAW.*Philadelphia Record.*

There is a general and apparently a concerted demand on the part of the great trunk railroad managers for the repeal of the fifth section of the Inter-state law. This is the important section relating to the formation of railroad "pools." While there is nothing to prevent the railroad companies from having understanding in regard to rates of freight, they find that the prohibition of pools seriously interferes with their mutual arrangements. The fourth section of the act, relating to "the long and short haul," is scarcely less obnoxious to them than the provision against pools, and if these two features could be effaced from the law they think they might manage to get along very comfortably with the rest of the statute.

As a compromise between the public and the railroads the Inter-state Commerce act is anything but a perfect measure. When the law first went into effect the Commissioners, in their extreme caution, made so many exceptions from its strict enforcement that the

railroad companies had not much difficulty in accommodating themselves to its provisions. But since the law has been put into working order and the Commissioners have refused to grant dispensations in behalf of the numerous claims of exemption from its operation, Government supervision of the railroad companies has been found extremely inconvenient to the parties immediately concerned. As a great deal is left to the discretion of the Commission, the future success of the law must largely depend upon the character of the men who may be intrusted with its enforcement. Thus far, at least, neither the public nor the railroad companies have any just cause of criticism or complaint in regard to the Commission.

Whether the demands for repeal of the fifth section of the Inter-state Commerce law be or be not inspired by the result of the late election, they are not likely to receive favorable consideration from the next Congress. There will be no reaction against the spirit and policy of the Inter-state Commerce law. As for the railroad stockholders who complain of the decline in their dividends, they will not discover the cause of it in the operation of the laws. Nor will they find a remedy in a restoration of the "pool" arrangement. But for the intimate relations of railroad management with the manipulations of the stock boards for a rise or fall in the market, shareholders would not have so much reason to mourn the loss of their dividends.

The people—the producers and consumers of railroad freights—are chiefly concerned in protecting the public interests against the encroachments of the great corporations, and they will jealously watch every attempt to cripple the law which they have set up for their defense.

THERE is now a proposition to have railway tunnels under the city of New York, sixty feet below the street surface. The tunnels will extend from Long Island to New Jersey, and when completed, the freight and passenger depots will be located in this underground New York. The underground city will be lighted by electricity and only electric motor power will be used, and at the subterranean crossings great elevators will be constructed to lift passengers and freight to the surface. It will take a pile of money to construct the tunnels, but since capitalists are multiplying and wealth is increasing something will have to be done to keep it from lying idle, and during the next half century, the world will witness daring enterprises, the mere mention of which at present makes the heads of millionaires dizzy.

Merchant Traveler :—"Whose deal is it?" asked one wheat cornerer of another.

FOREIGN CONTRACT LABOR.

New York World.

The Common Council of Reading, Pa., has passed an ordinance making it unlawful for any contractor on public works, such as sewers, reservoirs, public buildings and the like, to employ any but citizens of the United States. It is said that the ordinance emanates from labor organizations in Reading, and that it is a part of a concerted effort to be made in all the leading cities to put a stop to the importation of foreign contract labor.

Such a law has already been proposed in this city. With some modification it has met much approval. Persons who emigrate to this country with the honest intention to become citizens should be eligible for employment after they have legally declared that intention. When an immigrant has taken this first step in naturalization he has done all that is in his power to make himself a citizen and he awaits only the delay required by the law to complete the work.

It seems just that the money paid by the citizens for their public works should go to citizen workmen rather than to strangers who come here only for a temporary refuge. If the law prevailed in New York many hundreds of unemployed citizens would have found employment on the aqueduct in place of vagrants.

But the Reading ordinance will go on but a very little way towards abolishing the "importation" of contract labor. The public contractors of a city find their cheap foreign laborers here. The wealthy "protected" manufacturers and corporations are the "importers" of the pauper labor of Europe, and a law which will reach the evil must be of wider and more general application than a city ordinance.

PRESIDENT DEPEW, of the New York Central, while recently in Europe, rode upon the Government railroads in Germany, Belgium and France and concludes that the American railroad is enormously superior in all regards to the European institution. In riding upon a French road he says "the people in the cars were virtually slung from one side to the other by the oscillation of the train. It was impossible to read or even comfortably dispose of a lunch. One gentleman, who was very fat, was laid up for a week by the muscles of his abdomen being bruised and strained because he was slung about so miscellaneously during the six hours' trip." It would be difficult to find such railroading in the United States, and yet there are silly Americans who are everlastingly slopping over about the superiority of Europe in all things.

Toledo Blade :—Many struggling men keep pup by supporting a useless canine.

DOG INTELLIGENCE.

Exchange.

A story is told of a dog which lived on a ship. The vessel was anchored in the harbor of a foreign port. The dog often went ashore with the officers, and, being occupied with various doggish amusements, often was left behind when the officers returned in their boat to the ship. The first time this occurred the poor dog knew not what to do when he found the ship's boat gone. He ran up and down the wharf barking and whining.

A boat was lying at the wharf in which a native was sitting. The dog suddenly stopped, jumped into the boat, and gave several short barks, as if to say: "I want to go to that ship out there."

The man knew the dog, took in the situation, and, doubtless thinking of a fee, he rowed the dog to the ship's side. The man got his fee, for the officers were glad to have their pet returned to them. After that the dog often got back to the ship in the same manner.

The following anecdote is somewhat similar in character, and speaks well for the dog's intelligence.

"You know how much I rush about in hansom cabs," said the narrator," and Scoti, my collie dog, always goes with me—we travel many miles in a week together in this way; but on one occasion I was walking and missed him.

"Search was in vain. The crowd was great, traffic drowned the sound of my whistle. After waiting awhile and looking elsewhere, I returned to my suburban home without my companion, and sorrowful, yet hoping that he might find his way back.

"In about two hours after my arrival a hansom cab drove up to the door, and out jumped Scoti. The cabmen rang for his fare, and thinking he had some how captured the runaway, I inquired how and where he found him.

"Oh, sir," said the cabby, 'I didn't hail him at all. He hailed me. I was standing close by St. James' Church, a looking out for a fare, when in jumps the dog.' 'Like his impudence,' says I. So I shouts through the window; but he wouldn't stir. So I gets down and tries to pull him out, and shows him my whip; but he sits still and barks as much as to say, 'go on old man.' As I seizes him by the collar I reads his name and address.

"All right, my fine gentleman," says I 'I'll drive you where you're a-wanted, I dare say!' So I shuts the door, and my gentleman settles hisself with his head jest a-looking out, and I drives on till I stops at this here gate, when out jumps my passenger, a-cikaring the door, and walks in as calm as though he'd been a reg'lar fare."

AN AMERICAN GIRL.*London Star.*

There is living at an old farmhouse at Cornay la Ville, in the department of Seine et Oise, a young American girl, whose quiet but steady success at animal painting promises to enable her to share with Landseer his reputation for animal painting. Miss Strong started painting pictures in San Francisco for her bread. She is a little girl, with blue eyes, brown hair, a small face, and a mouth with determined corners. Honest and earnest in conversation, she tells how she came to Paris. She could not afford the ten francs a lesson which Von Marcke charges; but the painter, seeing her need, gave her his advice gratis, and she picked up what she could at the ateliers. Her drawback was a want of knowledge of technique and anatomy, and she actually learned the latter by feeling the animals' bones and their relative positions. She says this is better than studying anatomy from a plaster cast or skeleton, in the case of dogs. She loves dogs, and stuck to her dog painting till she made it pay. She is shortly going to Algeria, to study there. Her country home in Cernay la Ville is surrounded by several chateaux, and from these she obtains subjects for her animal paintings. Miss Strong started to earn her own living at seventeen, "without a cent," as she herself says, and with no friends. When she had saved enough money, she went to Paris. The little woman's work now finds a market, but she has not done so well as she could "if my circumstances had been better," she adds, wistfully.

EUROPE IN AFRICA.*Missionary Herald.*

After the scramble for Africa, which has been going on for some six or eight years, and which is now practically ended, it is said that only about four and one-half millions of the eleven millions of square miles in Africa remain unattached, directly or indirectly, to some European power. Of these unattached portions, more than one-half lie within the desert of Sahara. France has about 700,000 square miles; Germany, 740,000 square miles, to which should be added, if various disputed claims were admitted, another 200,000. England's possessions and "sphere of usefulness," not including Egypt, are set down at about 1,000,000 square miles. British trade with Africa is estimated to be worth about \$125,000,000 annually, while that of France is about \$1,000,000. The total commerce of Germany with the great continent is yet insignificant. The total value of exports and imports of Africa is estimated at \$350,000,000 annually. An enormous sum, truly. What a field for commercial enterprise the great continent is!

WOMEN AND ROSES.

Malherbe—There are only two beautiful things in the world—women and roses—and only two sweet things—women and melons.

Bulwer Lytton—O, woman! In ordinary cases so mere a mortal, how in the great and rare events of life, dost thou swell into the angels!

Saville—Women have more strength in their looks than we have in our laws, and more power by their tears than we have by our arguments.

Emerson—A beautiful woman is a practical poet, taming her savage mate, planting tenderness, hope and eloquence in all whom she approaches.

Anna Cora Mowatt—Misfortune sprinkles ashes on the heart of the woman, and brings forth germs of strength of which she herself had no conscious possession.

Thackeray—Almost all women will give a sympathizing hearing to men who are in love. Be they ever so old they grow young again in that conversation and renew their own early time. Men are not quite so generous.

PREHISTORIC SETTLERS IN DAKOTA.

Professor Henry Montgomery, of the University of North Dakota, has made some successful explorations near Devil's Lake Dakota. He has found the remains of some extinct race, which, for the want of a better name, he has called the mound builders. He has been at work at these discoveries since 1883. He excavated twenty-one mounds last year, and each mound averaged fifty feet in diameter, with a range from thirty to ninety feet, and was five feet high. Seventy-one skeletons of human beings were taken from these mounds. The sutures of the skull were quite distinct, and were decidedly marked in form. Implements of stone, bone, copper, and some of birch bark, were excavated, as well as earthenware of skillful workmanship. The copper in the tools was undoubtedly taken from the rocks in the vicinity, as it is of the same quality and fineness of that now produced.

The professor is of the opinion that these skeletons belong to a Mongolian race, not as Chinamen of to-day, but a larger-sized people. Some of the skeletons were six feet in length. Buried in these mounds were also skeletons of bears, and other animals, and, as altars of clay were found, it is believed these animals were offered as sacrifice, and that many of the mounds were sacrificial. Professor Montgomery is satisfied that a city once flourished there, and it is his intention to continue his explorations for some time, as there are more mounds yet to be opened.

Martha's Vineyard Herald:—It takes a very smart man to guess the weight of a ton of coal as it comes from the dealer's yard.

LUCK AND INSANITY,*Globe-Democrat.*

Several years ago, when Sansom street, Philadelphia, was filled with gambling dens from one end to the other, there was enacted a scene in one of these illegal retreats that really exceeds belief, says the *Wilmington News*. The principal actor in one of the most venturesome and successful gambling deals was a young college student who had never played at a gaming table in his life. Having heard and read considerable about the wonderful fascination of gambling, this young man, while on his way home one evening, decided to visit one of the dens and try his luck. He had but \$15 in his pocket, and was willing to spend that amount for his experience. Being alone upon the evening introduced he selected what he supposed was the most conspicuous establishment on the street.

He entered the room, seated himself at one of the tables, and contented himself by simply watching others play. No one molested him, and he soon had a fair insight into the game. As soon as he manifested a desire to play, cards were brought, and his opponent allowed him to win the first game, doubtless for the purpose of leading him on and inducing him to play for larger stakes. The second game was played with a little more spirit, and he soon won again. The next bout was enlivened by a strenuous effort of his opponent to win, but that game, like its predecessors, was destined for the hero of the evening. The first stake of \$5 had been doubled at each new game, and the young student began to warm up to his work.

Game after game was played in rapid succession, and the student had quickly accumulated a small fortune. Notwithstanding the shrewd manipulations of his opponent, the student never lost a game. Other men came along and tried their hand against the young player, but they all met the same fate as the first player, and soon left the table completely broken in purse and spirit. As the hours rolled by the interest in the young stranger became intense. Games were stopped at all tables excepting his, and all eyes were fixed upon the man who had vanquished some of the best players of the house. The stakes now ran into the thousands and still the student won. Ten thousand bets were quickly followed by twenties, twenties doubled themselves up into forties, and still the student won. His luck never deserted him, and when he left the gambling house instead of \$15 he carried in his pockets \$45,000.

The following morning the student was unable to leave his bed. His parents summoned their physician, who insisted that the young man was threatened with a severe attack of brain fever. To make matters

worse the patient persisted in telling the doctor about his adventure. The physician then declared that the young man was insane, and so informed his parents, who were naturally frantic with grief. Later in the day an intimate friend of the family called and was ushered into the patient's presence in order to test the insanity theory which the physician had advanced in the morning. The student told his friend the whole story of his night's experience. He graphically described how he went into the gambling house with but a few dollars in his pocket and came out with a moderate fortune. "Now," he said, as he reached the end of his narrative, "the doctor says I am insane; I am not. To prove to you that I know what I am talking about, I will tell you where to find the money." And, sure enough, the money (\$45,000) was found where it had been secreted the night before. After his friend had brought the pile of greenbacks to the sick man's bedside the family were let into the secret, and a more thoroughly astonished household perhaps never gathered under one roof. As soon as the excitement had in a measure subsided the young man said that the possession of the money for one night had been the cause of his fever. He declared that the dollars were not his, and as he did not know to whom they rightfully belonged, he gave them to a charitable institution. As incredible as this story may appear, every word of it is true, and it happened in Philadelphia during the reign of Mayor William B. Smith.

HE KEPT HIS PROMISE.

During the lifetime of jovial engineer Bronson's first wife it was his custom when dashing into town with his engine to blow a long flourish on the whistle as a signal to his wife that his run was completed and he was all right. Upon her death-bed Mrs. Bronson made him promise that as long as he remained an engineer on the road he would remember the grass plot in the cemetery, where she was to be laid, and blow the whistle whenever he passed. A short time ago engineer Bronson married his second wife. He has faithfully kept his promise to the dead and, and blown long dismal blasts whenever passing the cemetery, afterward saluting the quick by joyful tootings as he rushed into town, so that the living wife might prepare in season the evening meal. Yesterday, for the first time, the engineer ran by the cemetery forgetful of his promise. During the night, in fitful dreams, his forgotten promise must have occurred to him. He arose, and mounting a switch engine, backed the engine over to the cemetery, blowing screeches upon the whistle. After thus fulfilling his promise he returned to bed unconscious of what he had done.

RESPONSIBILITY OF RAILROAD MEN.

"As I look over the faces of these men before me, I cannot help thinking what a responsibility rests upon them. There is probably no class of men in the world who have so many lives continually in their hands, strangers to them, as they are to the people under their charge. I once heard a man who had often been disappointed, say, 'You can't put confidence in anybody!' Yet think of the millions of people traveling in railroad trains, at this very hour, whose lives are in the hands of strangers they never saw—not only the men who run the trains, but you, practical and intelligent mechanics, who manufacture the iron and appliances used, in which a little carelessness on your part might destroy we cannot tell how many lives.

It is wonderful how in this life everything seems to develop the right men for the places that need them; their professions develop them. In associating with men of different professions I have been struck with this fact, that the railroad profession seems to me, is developing stronger men than any other. I say railroad profession, because it is a profession. The legal profession, the medical profession and the other professions develop men of their class. The men in railroad business must be men of brains, or they cannot sustain themselves or fill their places long. In some of the other professions men may blunder; they may blunder into wealth; but there can be no blundering in the railroad business on the part of the men who carry out its important details in their respective positions."—*Ex-Governor Smith, at New England Dinner.*

WHO ARE HEROES.

Railway Service Gazette.

The heroic action of Fireman Kellog, of the Missouri Pacific, reported in the last number of the *Gazette*, excites general admiration. In a wreck near Eldorado, Kas., Mr. Kellogg was thrown a distance of fifty feet and badly hurt, but he crawled to the wreck where engineer Spencer was caught between the engine and tender, and held up the imprisoned man's head, and kept him from drowning for almost an hour, until they were rescued.

Again we recall the sneering remark of a railway exchange, when Grand Master Sargent incidentally referred to the "heroes of the scoop" during the C. B. & Q. strike, and again we ask if the locomotive fireman, even with his dust-covered face and greasy clothes, in view of such deeds as the one reported above, has not about as nearly earned the right to be called heroes, as the average run of mortals here below. The stunning swell of the general office in his faultless attire, may be more pleasant to look at than the

fireman, but in those awful moments, while the dark-winged angel of death is hovering over the scene of wreck, ruin, flood and fire, then the metal from which the true heroes are made is tested.

The great swells of the railway service are all right. They are created for a certain purpose. They are created for a certain purpose. They meet the requirements of their creation, we suppose. But you must not attempt to rob the unassumed working men of what you consider the lower ranks of the service, of the glory reflected upon them by a thousand deeds like the one mentioned above. There, from the terrible wreck, come the shrieks of the crushed, bleeding and dying; there, amid the devouring flames and black, rushing waters, death is holding its carnival. Beneath the blackness of night, the lurid glare reveals a sight more horrible than fancy can picture of hell. You stand appalled. Your face whitens; your heart's blood freezes. Your limbs refuse to move. Well, that is not your fault. You are not built that way. Lives there a man who in a scene like this, his own limbs broken and bleeding—lives there a man with a courage so undaunted, with presence of mind so wonderful that he forgets only himself, but remembers his brother and crawls to his aid? Such there are. Such was Fireman Kellogg, and there are thousands more like him among the humble, unpretending workers in railway employ. It is sublime; it is heroic, if the heroic is ever attained in this world. These are the "heroes of the scoop," of the throttle, of the punch, of the brake, and among the living and the dead there is not one who can question their title to heroism.

BUILDING A POLITICIAN.

A farmer had a son who showed no special aptitude for business, and he was puzzled what to do with him. He concluded to try an experiment, so he locked the boy in a room in which there was only a Bible, an apple, and a dollar. A few minutes later he stole quietly to the room. He had made up his mind that if he found the boy eating the apple he would make a good farmer, if he were reading the Bible, he should be trained for the pulpit, and if he had taken the money, his success as a broker, the father thought, was assured. Upon entering the room he found the boy sitting upon the Bible, eating the apple, with the dollar in his pocket. The boy became an able politician.

Texas Siftings.—She—"Perhaps you're not aware, Col. Snarlington, that I had half a dozen offers before yours."

He—"And perhaps you are not aware, Mrs. Snarlington, that I proposed to a dozen different women before I met you."

THE GOLDEN FLOWER.

When Advent dawns with lessening days,
While Earth awaits the angels' hymn;
When bare as branching coral ways
In whistling winds each leafless limb;
When Spring is but a spendthrift's dream,
And Summer's wealth a wasted dower,
Nor dews nor sunshine may redeem—
Then Autumn coins his Golden Flower.

Soft was the violet's vernal hue.
Fresh was the rose's morning red,
Full-orbed the stately dahlia grew—
All gone! their short-lived splendors shed.
The shadows, lengthening, stretch at noon;
The fields are stripped, the groves are dumb;
The frost-flowers greet the icy moon,
Then blooms the bright chrysanthemum.

The stiffening turf is white with snow,
Yet still its radiant disks are seen
When soon the hallowed morn will show
The wreath and cross of Christmas green,
As if in a-turban's dying days
It heard the heavenly song afar,
And opened all its glowing rays,
The herald lamp of Bethlehem's star.

Orphan of Summer, kindly sent
To cheer the fading year's decline,
In all that plying heaven has lent
No fairer pledge of hope than thine,
Yes, June lies hid beneath the snow,
And Winter's unborn hair shall claim
For every seed that sleeps below
A spark that kindles into flame.

They smile the scowl of winter braves,
Last of the bright robed, flowery train
Soft glowing o'er the garden graves,
"Farewell! farewell! we meet again!"
So may Life's chill November bring
Hope's Golden Flower, the last of all,
Before we hear the angels sing
Where blossoms never fade and fall!
Oliver Wendell Holmes.

THE CAMPHOR TREE.

London Paper.

Why do we continue to depend on certain parts of the world for our supply of what have become necessities? Some of them are vegetable products that with due care ought to be naturalized on some part of our continent, in which there is every variety of soil and climate. Why cannot the camphor tree be grown? The tree is of the laurel family, and grows in China, Japan, and several of the East India countries. It is a tree of considerable size, straight, towering, elegant. The leaves are oval, inclining to the lancehead shape, as they are pointed at each end. They are glossy and leathery, smelling of camphor strongly when rubbed in the hand. The blossoms of the tree are very small; the fruit is a berry about the size of a pea, of a deep purple color when ripe. The camphor does not exude from the tree, even when the bark is cut, but is found in little bunches in the pores of the wood. To obtain it, the trunk, branches and even the roots are cut into small bits and distilled. The camphor, volatilized by the heat, deposits on the cover of the vessel as it cools, and to remove it easily the inside of the cover is lined with a matting of rice straw. The crude camphor is exported,

and in Europe and this country prepared for the market in the form under which we know it. The preparation of camphor originated with the Venetians, and was jealously guarded, but the Dutch in time obtained the secret, and succeeded to an almost complete monopoly of the trade. The wood of the tree is used for trunks and boxes, in which to preserve valuable vestments and garments, as the powerful odor repels most insects.

RAISING VEGETABLES BY MUSIC.

Texas Siftings.

A correspondent of an English journal professes to have discovered that musical sounds stimulate the growth of plants. If that is so a vast field—in fact, any quantity of fields—is opened for the utilization of the surplus music of the country. Wheel the piano out into the garden and let your daughter practice her daily lessons, in order to hasten the growth of spring vegetables. Hire a brass band to march through your fields, and you will hear the grain growing, with their "Coming through the Rye." Cultivators are manifestly unnecessary if you will only lead a fife and drum between the rows of corn. This would render farm work easy and agreeable, besides cultivating an ear for music in the growing corn. And it needn't surprise you to hear the constalk about it, either. New songs might be composed to aid in this new mode of culture, and the authors may be sure of their bringing something to eat, which hasn't always followed song writing. Titles easily suggest themselves—"Call me Where My Radishes are Sprouting," "Mother, how are the Early Potatoes Coming On?" etc.

THE ENGINEER'S SIGNAL CODE.

The following signals, taken from the standard code, are used by the majority of the locomotive engineers employed on American railroads.

The sign **O** means a short, quick sound, while the dash — means a long sound.

Apply brakes, stop	O
Release brakes, start	O O
Back	O O O
High way crossing signal, —	O O or O O —
Approaching station, — blast lasting 5 seconds.	O O O O
Call for switchman	O O O O
Cattle on track	— — — —
Train has parted	O
Railroad crossing, same as approaching station.	O O O O
For fuel	O O O O
Bridge or tunnel warning	O O —
Fire alarm	O O O O
Will take side track	— — — —

Red signifies danger; green signifies caution, go slowly; green and white signifies stop at flag stations for orders for passengers or freight. One cap or torpedo on rail means stop immediately; two caps or torpedoes means reduce speed immediately and look out for danger signal.

SHE DID'T SCARE.*Detroit Free Press.*

"Say, fellers," he remarked to a crowd in a grocery the other evening, "I know how we can have some fun."

Several parties asked him to explain, and he said:

"My wife is always telling how brave she is and what she'd do in an emergency, and I want to take her down a peg. I believe she'd scare like a cat. I want one of you to go to the back door and be ugly and sassy and demand supper, and see if she won't fly out of the front."

One of the crowd said he'd cheerfully go, and go he did, while the others posted themselves in front. By and by a woman came to the door, looked up and down, and said to a boy who was passing:

"Bubby, won't you go over to the store and tell my husband to come over?"

"Yes'm."

"Needn't hurry any, but just drop in if it's convenient."

When the crowd came over they found the volunteer lying on his back in the rear yard, unconscious and his nose broken, and the wife said:

"He wanted supper, and was ugly about it, and so I laid him out with a flatiron."

And an hour later, when the poor man felt of his nose and wanted to know who was to pay damages, echo sadly answered "Who?"

REFORM.*Globe-Democrat.*

Rev. Wilbur Crafts has turned for help to the Knights of Labor. He represents those who desire to Christianize the Constitution, to enforce Sabbath keeping and put an end to all actions on that day not fully in accord with his own views. He wants all postal service stopped on Sunday, even to the moving of the mail. Sunday trains of every description are his abhorrence. Sunday newspapers are an unpardonable crime. At the garrisons the soldiers should not be paraded on Sunday. There are worse things the soldiers might be at in barracks, as Bro. Crafts might know. As to Sunday papers, they are doing more preaching than the pulpits, and are a positive power for direct good. To stop Sunday trains should also stop Sunday carriages, and Sunday grooms, and cooks, and waiters. As to the postal services, to stop it altogether on Sunday would do as much mischief relatively as to stop the world's motion on Sunday. Suppose the Sabbath National Reformers try to stop the trees growing on Sunday.

Buffalo Express:—A west side young man calls his girl "Opportunity" because he so gladly embraces her.

NOT CONTAGIOUS.*New York Sun.*

"What were you laughing at so loudly this evening?" asked Mrs. Brown when her husband came up-stairs to bed.

"I was telling that old schoolmate of mine a very funny story."

"But I didn't hear him laugh."

"No," growled the old man, "that fellow is an ass."

FAST TIME.*Lewis & Dryden's Guide.*

The fastest time ever made between Portland and Chicago was that of a special train chartered by Geo. W. Markle, a prominent Portland banker to convey him to his father's deathbed. The train left Portland Tuesday at 8 P. M., and reached Chicago at 11 A. M., Friday, having made the run of 2,310 miles in sixty-three hours, an average of thirty-five miles an hour. Between Portland and Huntington, a distance of 404 miles, the run was made in less than ten hours. The average speed between Cheyenne and Omaha was forty-nine miles per hour, and between Portland and Cheyenne forty-eight miles. The train cost Mr. Markle \$2,000, or \$32 an hour, or 50 cents a minute. Elijah Smith will probably endeavor to beat this time when he visits Portland next summer.

IT IS NOT ENGLISH.*New York Times.*

No question is oftener asked by Americans in England than the reason why the English roads do not adopt the Pullman service and open cars. The answer has been repeatedly given by railway men, and is always the same. The English do not want open cars, and will not have them. The Englishman likes his compartment, and desires as few strangers in his company as possible. Both from force of habit and national qualities, he objects to any innovation on the methods of travel to which he is accustomed. As an instance of this, the manager of one of the largest roads said: "Two years ago we sent two of our men to America under salary and expenses to examine everything of value in the American railway system and report to us. When they returned the only valuable suggestion they had to make, in our opinion, was the adoption of the American system in checking baggage. We tried it. We took baggage up at the house of the owner and delivered it at his destination in whatever city he was going to. We could not make it popular, however. The first year we managed to clear expenses, our profit being £7. The next year we cleared £15. The fact is the English people like their own way of doing things, and you cannot change them."

BECAUSE I LOVE YOU.

"I can not bring you wealth," she said;
 "I can not bring you fame or place
 Among the noted of the race,
 But I can love you.

"When trials come to test you, sweet,
 I can be sunlight to your feet;
 My kiss your precious lips shall meet,
 Because I love you.

"When daylight dies along the West,
 You will come home to me to rest,
 And I shall sleep upon your breast,
 Because I love you.

"If sickness comes, beside your bed
 I will bend low with quiet tread
 And pray God's blessing on your head,
 Because I love you.

"As dew clings to the violet,
 Making the fragrant chalice wet,
 So my life unto yours is set,
 Because I love you.

"Only myself, my all, I bring;
 But count it sweet, a precious thing
 To give my life an offering,
 Because I love you.

"I bow before no other shrine;
 If I go first across death's line,
 I will return to claim you mine,
 Because I love you."

—Sarah K. Bolton.

A CONVINCING ARGUMENT.*Boston Transcript.*

There used to be in practice in one of the southeastern cities of Massachusetts, a well-known lawyer who had a considerable degree of success at the bar in spite of an infirmity of speech that he never could get rid of. His stuttering appeals in behalf of his clients were sometimes fearful and wonderful deliverances oratorically, but his opponents used to say that they really gained in effectiveness from his stuttering, because the jury not only sympathized with him but had time to take in and digest all his points.

One day he appeared in a Bristol county court room, before Judge Pitman and a jury, to defend a very tough looking citizen who had been arrested on a charge of selling liquor without a license. The man had a bad reputation and a bad face; whisky had been found on his premises, and if ever a man was convicted before he was tried it seemed to be this one.

But his stuttering lawyer was equal to the emergency. He cross-questioned the policeman who made the seizure:

"You s-s-say you found li-li-li-liquor in this man's house?"

"Yes."

"W-w-w-hat kind of liquor w-w-was it?"

"Whisky."

"Um. Now, h-h-how much w-h-h-hisky did you f-f-f find?"

"About half a pint, sir."

"H-h-h-half a pint? Yes. Now g-g-g-gentlemen of the j-j-j-jury, I want you to

take a good l-l-l-long look at my c-c-c-c-li-lilent."

The jury took a good long look at him. He wasn't a very pleasant sight to see; his nose was a sort of purple vermillion, and considerably exaggerated in its proportions at that; his brows were low and shaggy, and his eyes bleared.

"Now, g-g-g-gentlemen of the j-j-j-j-jury," the lawyer went on, "I want you to t-t-t-tell me if my c-c-c-c-c-li-lilent looks like a man that would s-s-s-sell a half pint of whisky if it was all he had in the house?"

The jury acquitted the man without leaving their seats.

MACHINERY AND POWER.*Mechanical News.*

There are innumerable illustrations of the increase of efficiency and productive power which mankind derives from the introduction of machinery. One of the most striking, perhaps, is reported by the railroad statistics of the United States. It has been computed from these that the land transportation, for which, in a single year, the railroad companies receive less than \$1,000,000,000, would cost if accomplished in any other way more than \$11,000,000,000. Here are ten thousand millions dollars saved in one year by one description of machinery alone; or, to put the case in another way, the human energy which without such assistance would produce results valued at one thousand million dollars is multiplied elevenfold by the agency of the steam engine. Between the man, say of the Stone Age, and his descendant who has begun to cut out work for the twentieth century after Christ, there is a gulf which may be defined but is not easily realized.

WHITE SLAVES IN MASSACHUSETTS.*Journal of United Labor.*

A case of inhuman cruelty is agitating the citizens of Holyoke, Mass. C. T. Parsons, a notorious Northampton pauper labor contractor, started Monday from his home with one of his white slaves, a thinly-clad, half starved Polander, for the purpose of going to Springfield, where he says he intended to send the man to New York to get rid of him. When he reached Holyoke the man was left in the buggy for more than an hour when he became so chilled that his suffering attracted the attention of passers by who discovered that he was chained to the seat and could not move. Parsons has for four years imported immigrants from Castle Garden into Massachusetts, and bound them out to farmers under iron-clad contracts, receiving \$10 per capita for his services. It is proposed to see what the Courts of Massachusetts think of such inhumanity, and Parsons will be prosecuted for cruelty and trafficking in human flesh.

TROUBLE AT THE MUSEUM,*Time.*

Manager—Where's the livin' skeleton, Joe? It's his turn to go on.

The General Utility Boy—He went an' slipped while he was a washin' of his hands, an' went down th' waste pipe.

THE MODERN EXCUSE FOR BLACK EYES.*Shoe and Leather Reporter.*

The excuse for a black eye and a damaged visage used to be that the man "was chopping wood and a piece flew up and struck him." Now the bicycle accounts for similar mishaps. "Was out for a spin on my wheel and took a header."

A THOUGHTFUL SPOUSE.*Philadelphia Record.*

Mrs. Winks—What have you got your husband for a Christmas present?

Mrs. Minks—Oh, something perfectly lovely; a great big handsome flower stand and twenty-five pots of flowers. I'm sure he won't object so much to carry 'em in and out when he knows they're his own.

NOW THE MARSHAL NEIL ROSE ORIGINATED.

After his heroism in Italy the then General Neil, while returning to France, was given a basket of roses by a peasant. In it was a bud with a root attached to the stem. Niel kept the shoot and gave it to a noted floriculturist, who obtained from it four of the loveliest lemon colored roses the world had ever seen. Neil carried them to the Empress Eugenie, who remarked with vivacity: "I will christen this rose for you—the Marshal Neil," and from that day General Neil was a Marshal of France.

THE PROFESSIONAL POLITICIAN.*Courier-Journal.*

He is miserably underpaid out of the public treasury, and if his integrity be in the least uncertain, the temptation to put it in commission is ever present and pressing. If he satisfies his constituents he must work like a nigger on a rock pile. If he does not, he is likely to fall by the way into the moral slums that yawn on every hand. He is every man's man when he is wanted for something, and no man's man when he wants something for himself. His life is a perpetual hypocrisy, for it is impossible for any one honestly to slop over as he is required to do on every occasion of public excitement or private entreaty. He becomes, in spite of himself, a kind of masculine courtesan, and, in time, sustains himself upon a system of organized selfishness, or sinks beneath a load too heavy for human endurance.

IT BROADENED HER.*Time.*

"You enjoyed your summer abroad didn't you, Mrs. Moneybag?"

"Oh, very, very much, indeed! We had a charming time and acquired so much information. One gains so much by attrition, by coming into contact with other minds and other scenes, don't you think so?"

"Oh, yes, certainly. You went to Paris?"

"Oh, Paris, dear Paris! Can I ever forget it! We were there nine delightful days and spent seven of them at Worth's—think of it!"

"And you spent some time in London?"

"Oh, yes; three whole weeks, and really it is quite remarkable how plainly London ladies dress. We were so surprised every time we rode in the park. But I don't think I ever ate such delicious soups as we had there. We have talked about them ever since."

"Did you go to any of the famous watering places?"

"Oh, yes; to quite a number, and there again we were surprised. The ladies at Newport and Bar Harbor dress so very much more and in so much better taste than at English summer resorts. It is really quite remarkable how great the difference is."

"You didn't get to Rome; did you?"

"Oh, yes; but we found it very dull there. Do you know I actually spent three of the four days I was there trying to find a milliner who could make me a decent bonnet and I had to give it up at last. Oh, Rome is horrid. But, take it all in all, Europe is charming and you've no idea how it broadens and expands one's mind to spend a season or two abroad."

NEVADA is a splendid illustration of the rotten borough State idea. It was brought into the Union for a partisan purpose and with insufficient population. Its present mission is to provide seats in the United States Senate for San Francisco millionaires of the bonanza type, and assure the Republican majority in the Senate. In 1880 Nevada cast a total of about 18,000 votes. In 1884 the vote fell to 12,771. At the recent election it was somewhere in the neighborhood of 10,000, thus showing a steady diminution in population. There is a little hope of a change for the better in a State whose resources are exhausted. It probably never will be able to sustain a population of 50,000 or 60,000.

Omaha World:—A social authority says that one hundred years ago every picnic was a continual round of hugging and kissing. Alas, the old-time picnic has gone, but no matter. There is no law against going to camp meetings.

RILEY AND NYE.

Jeems Whitcomb Rilcy's been down South,
Erlong with Billy Nye,
And Bill made lots of fun for us,
While Jeems he made us cry.

But it wasn't no such crying
As Yankees used to bring.
It was kinder soft and tender
Like songs we love to sing.

We feel much better since they come,
With their pathos and their fun,
It's a better way to meet us,
Than to bring erlong a gun.

Jeems seems so kind and tender,
Without a spark of guile,
When he told of "Orphant Annie,"
A little homeless child.

And all our hearts went out to him—
The wimin and the men—
And latch-strings hang outside the door
For him and all his kin.

Then let 'em roll, and let 'em come,
All Yankees of this kin',
It makes us brothers once again
And wipes out Dixon's line.
—*Plunkett, in Atlanta Constitution.*

THE TELEPHONE TWO HUNDRED YEARS AGO.

How rare it is to discover anything that is entirely new is freshly exemplified to us, says the Popular Science Monthly, in what Robert Hooke wrote about what has become of the telephone, as far back as 1664, or two hundred and twenty-four years ago. He said: "And as glasses have highly promoted our seeing, so it is not improbable that there may be found many mechanical inventions to improve our other senses, of hearing, smelling, tasting, touching. 'Tis not impossible to hear a whisper a furlong's distance, it having been already done; and perhaps the nature of the thing would not make it more impossible, though that furlong should be ten times multiplied. And though some famous authors have affirmed it impossible to hear through the thinnest plates of Muscovy glass, I know a way by which it is easy to hear one speak through a wall a yard thick. It has not yet been examined how far acoustics may be improved, nor what other ways there may be of quickening our hearing, or conveying sound through other bodies than the air, for that is not the only medium. I can assure the reader that I have, by the help of a distended wire, propagated the sound to a very considerable distance in an instant, or with as seemingly quick a motion as that of light, at least, incomparably swifter than that which at the same time was propagated through the air, and this not only in a straight line, or direct, but in one bended in many angles."

Exchange:—England claims to have a "converted actor." That is not much to brag of. We have over here several "reformed churches."

LEGALIZED ROBBERY.*The Laster.*

The corner in wheat which was manipulated by "Old Hutch" in Chicago recently, together with other causes, similar in nature, has advanced the price of flour to quite an extent. This man, not satisfied with the mischief he has already wrought, has laid his plans to "corner" all the visible supply of December wheat, with a view of forcing the speculative value of that necessary of life to \$2.50 per bushel by January 1st. With a coal combine which regulates the price of that commodity, regardless of the wants of the people, with the meat, sugar and oil "trusts" to enhance the value of the articles by restricting the quantity to be placed upon the market, the working people of the country, who are now largely underpaid, are in a bad fix indeed. The principal remedy for this evil is legislation, both state and national, which will declare the formation of these combines illegal, and this can only be accomplished by impressing upon the minds of the state and national legislators that their tenure of office will not be secure unless they will aid in remedying the existing state of affairs. And as every successful movement must be achieved by organization, the labor unions of the country are in a position to, and by virtue of their principles should take the initiative in this reform. This subject should be discussed in the meetings of every local labor organization throughout the country, and elsewhere as well, in order that the people generally may understand the nature of the gigantic fraud being practised upon them. Once they realize it, the remedy will be soon applied.

SWINDLING IN THE MENU.*Detroit Free Press.*

"Where is them oyster shells?"

This was the call in a prominent Detroit restaurant the other day.

"Here you are. Eight dozen Blue Point deep shells," said the waiter, as he gave a basket to the messenger.

"What does that mean?" asked a reporter of the proprietor.

"Oh, a man on the West Side is going to give a dinner party. He buys bulk oysters and puts them in back number shells as Blue Points. See?"

"Is that a common thing?"

"No more so than sparrows and taxes."

A NEED OF VIGOROUS EXERCISE.*Gibson County Leader.*

Now begins the season that the hand-to-mouth liver gets a seat around the store stove and croaks about hard times. If such fellows took a little more exercise during the summer months they might have better health and more to eat.

GRAND LODGE

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

JANUARY, 1889.

Notices of Importance.

OFFICE OF THE GRAND LODGE, B. OF L. F.
TERRE HAUTE, IND., January 1, 1889. }

To Subordinate Lodges:

SIRS AND BROTHERS:—Your attention is hereby called to the following notices of importance, viz:

INSTRUCTIONS.

A circular of instructions in reference to the new work will be forwarded to all Lodges in due time.

THE NEW WORK.

The new work adopted at the late convention, including constitutions, printed proceedings and changes in the ritual will be forwarded to each Lodge closely following this issue of the *Magazine*.

ASSESSMENTS.

There have been no assessments levied for the month of January, neither special nor beneficiary; this will give members an opportunity to meet the quarterly payment in advance (to cover dues and beneficiary assessments) required under the new law, of which notice is given elsewhere.

QUARTERLY PASS.

The quarterly pass in effect for the quarter ending December 1, 1888, will remain in effect until February 1, 1889, in compliance with the provisions of the new law. The changes hereafter will be made on the 1st day of February, the 1st day of May, the 1st day of August and the 1st day of November of each year.

TO COLLECTORS.

In collecting dues under the new law you will receipt for same in the usual form, as "Dues for quarter ending April 30," for the first quarter, etc., etc. On or before February 5th, you will deliver to the Receiver a statement containing the names of all members who have made payment, with the amount paid credited opposite their respective names, together with the amount of your collections. The Receiver holds such

moneys and pays Beneficiary assessments therefrom upon call from the Grand Lodge, which will be made at the proper time.

Yours fraternally,
F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. & T.

Notice of Dues.

OFFICE OF GRAND SECRETARY AND TREASURER }
TERRE HAUTE, IND., January 1, 1889. }

To Subordinate Lodges:

SIRS AND BROTHERS:—Notice is hereby given that the first quarter's dues under the new law are payable on or before February 1, 1889. The amount is to be regulated by each of the several Lodges, provided that it shall in no case be less than five (\$5.00) dollars. This payment will be in full of local dues and Beneficiary assessments for the quarter ending April 30, 1889. Any member failing or declining to make payment as above provided will stand expelled (said expulsion taking effect February 2d) and will be so reported by the Secretary to the Grand Lodge.

Yours fraternally,
EUGENE V. DEBS, G. S. AND T.

Attention, Members!

(Reproduced from December Magazine.)

All the new laws enacted at the Atlanta Convention take effect on the 1st day of February, 1889. This fact is of the highest importance to every member of the Brotherhood.

The most important of these laws is the one which relates directly to the Beneficiary Department of the Order. This law requires the payment of all dues quarterly in advance. All collections are under the head of dues, and under this new law dues are not less than \$5.00 a quarter.

Previous to the taking effect of this law, (February 1, 1889), each Lodge should regulate the amount of dues, and notify its members. In this matter there should be prompt action. Delays will prove dangerous.

Each member should bear in mind that on the 1st day of February, 1889, he must stand square on the books of his Lodge in every particular; by which we mean, that on the 1st day of February, 1889, all arrearages must be paid and all dues one quarter in advance.

The quarters are arranged as follows:

1st Quarter.	2d Quarter.	3d Quarter.	4th Quarter.
February.	May.	August.	November.
March.	June.	September.	December.
April.	July.	October.	January.

On the 1st day of February all dues must be paid for the 1st quarter—February, March and April, and in the same way, for the other quarters of the year.

It was claimed by delinquents, after the enactment of the laws at the Minneapolis Convention that they did not understand them, and that they had not been published for their information in the *Magazine*. To avoid anything of that sort with regard to the law relating to the Beneficiary Department, we write this for the benefit of every member of the Order, and because, in a matter of so much moment, there should be no misunderstanding or reason for misapprehension.

It should be furthermore said that, if on the 1st day of February, 1889, a member has failed to pay all his dues, then as certain as fate, on the 2d day of February, 1889, he will stand expelled from the Brotherhood of Locomotive Firemen. The law is inexorable and expulsion inevitable, and the name of the delinquent will be stricken from the Grand Lodge register.

It will be seen that we have not overestimated the gravity of the situation and we give this notice, in advance of the taking effect of the law, that all may be prepared for the inauguration of a policy which is designed to promote the welfare of the Brotherhood.

Circulars.

The country is being flooded with circulars in reference to the C. B. & Q. strike, and scores of letters are being received inquiring whether such circulars are authorized and genuine. The circulars we have received have neither signatures nor seal attached, and are issued in flagrant violation of the law and are wholly unauthorized, and officers of Subordinate Lodges are hereby ordered to consign all such documents to the flames and not present them at Lodge meeting.

A malignant controversy has lately been aroused upon the subject of Accident Insurance, it being claimed that the Travelers' Insurance Co., of Hartford, is insuring the present employees of the C. B. & Q. One circular is issued with autograph signatures of prominent B. of L. E. and B. of L. F. men attached, making the charge, and another circular of the same character is issued denying it. Both sides insist that their statement is the correct one. We have nothing whatever to say upon this subject. From the information we have we do not feel justified in endorsing the charge or denying it. Each member must be guided by his own judgment in the matter.

Yours fraternally,

F. P. SARGENT, G. M.,
E. V. DEBS, G. S. AND T.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., December 1, 1888.

Beneficiary Statement.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending November 30, 1888:

BELFORD'S MAGAZINE.

DONN PIATT, Editor.

A Complete Long Novel in Each Number.

The November number of BELFORD'S MAGAZINE completes its first volume.

The discussion in its pages of the important political and economic questions of the day, and the fearless, able and independent manner in which they have been presented, combined with literary merit of the highest order, have already placed BELFORD'S MAGAZINE in the front rank of popular monthlies.

For the season of 1889 the present popular feature—a complete novel by well known authors, together with shorter stories and sketches by popular writers—will be continued. Book Reviews will also continue to be an interesting and entertaining feature of the Magazine.

The publishers will spare no expense to make it in every way a welcome and looked for visitor in every home.

Among the many thousand periodicals that have reviewed BELFORD'S, attesting its merits, we ask attention to these few:

"It fully ranks up with such old time magazines as the 'North American Review,' 'Century,' 'Harper's' and 'Atlantic Monthly.'"—Utica Chronicle.

"From cover to cover there is hardly a poor thing in it."—Hawkinsville Era.

"Nastily entertaining."—New Orleans Item.

"Filled with articles from the best writers of the times on all subjects, both political and literary."—Ohio Democrat.

"Abundance of logical arguments."—Boston Transcript.

SUBSCRIBERS NOW

will get the benefit of the reduction on the first volume.

Sample copies sent to any address.

For sale at all book stores and news stands.

No more suitable present, for lady or gentleman, than a year's subscription to BELFORD'S MAGAZINE.

\$2.50 per Year. 25c a Number.

Health is Wealth

DR. E. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of alcohol or tobacco, Wakefulness, Mental Depression, Softening of the Brain resulting in insanity and leading to misery, decay and death, Premature Old Age, Barrenness, Loss of Power in either sex, Involuntary Losses and Spermaorrhoea caused by over-exertion of the brain, self abuse or over-indulgence. Each box contains one month's treatment, \$1.00 a box, or six boxes for \$5.00, sent by mail prepaid on receipt of price.

WE GUARANTEE SIX BOXES

To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued only by

JAMES SOMES, Druggist, Sole Agent,
Cor Sixth and Ohio Sts., Terre Haute, Ind.

NOTICE

—TO—

ENGINEERS AND RAILROAD MEN

The undersigned respectfully gives notice that he has opened a place of business at the location below, for the sale of Watches, Emblems, Charms, Pins, Rings and Chains for all Railway Orders, of which he will make a specialty. He is also prepared to furnish anything desired in the line of Diamonds, Precious Stones, Ladies' Watches, Chains, Sets, Bracelets, Lockets, Gold Pens, Pencils, Buttons, Studs, Solid and Silver Plated Goods, Clocks, Bronzes, Opera Glasses, Gold Headed Canes, &c., in fact anything in the Jewelry Line, all of which will be warranted the best and at prices defying competition. Engravings and prices for any of the above articles will be furnished on application, and a number of samples sent C. O. D. to the nearest express office for selection. Hoping to secure a liberal portion of your trade,

I am respectfully yours,

JOHN J. McCRANE,
The Brotherhood's Jeweler,
48 and 50 Maiden Lane,
New York City, N. Y.

LABOR, LOGIC AND LAW.

In the United States of America, the citizen, however humble, may be esteemed; he possesses numerous rights which he may exercise, and of the propriety of any determination he is the sole judge. He is a sovereign citizen, and is amenable only to God, his own conscience and the laws of the land. First, the laws must be respected. A truth so self-evident need not be discussed. Law is law. It goes without saying that there are unjust laws enacted for unjust purposes, but it is not the province of the citizen to ignore them nor can he violate them with impunity. It is far better to obey them and to seek by lawful methods to have them repealed.

There may not be a law book in the country which contains a statute saying in so many words, "Be it enacted by — that every man may, unmolested, manage his

own business to suit himself." But, nevertheless, that is the law. No one has a right to interfere. It must be so, or order would be displaced by chaos; anarchy would take the place of law and society would become a mob. The law is supreme. It is made to secure the rights of all, and all must obey its mandates, the employer as well as the employé.

Such reflections lead us to consider the status of labor organizations. The wisdom, the rightfulness of such organizations are not debatable questions. They are settled for all time to come. They have a mission and will have a mission until the decree is revoked that "man shall eat bread by the sweat of his face." But their mission is within the boundaries of law. They must not transgress the law—human nor divine. Fortunately, in the United States, there is no necessity for such transgression. Here, labor has the ballot. Here working men make laws, create law makers. Here, they have a voice in making constitutions, fundamental, organic laws, upon which all statutes must rest for a foundation, and hence, labor organizations, which exist by virtue of law, are profoundly interested in maintaining, inviolate, the laws of the land.

With such propositions in full view, the conclusion is inevitable, that employers may hire whom they please at such rates of wages as may be agreed upon between employer and employé. Such is the logic of law. It is not difficult to suppose a case.

Take a railroad, the general manager of which concludes to pay locomotive engineers \$2.50 a day and locomotive firemen \$1.00 a day. Suppose his engineers are receiving \$4.00 a day and his firemen \$2.00 a day. In the case of the engineer, it is a *cut* of \$1.50 a day, and in the case of the fireman \$1.00 a day. Suppose the engineers and firemen on the road determine not to accept the reduction of wages. That is their right. There is no law requiring them to submit to such a reduction, nor to any reduction. Upon this right they plant themselves and stand immovable. The general manager asserts his right to say he has offered all he can or will pay, and this is done necessarily in face of the fact that if his present employes quit work, he must find men to perform it at the prices he names, or he must suspend operations. Now, then, comes into view arbitration—compromise—and the engineers and firemen show conclusively the reduction is too great, too crushing, that it is unjust, etc. A compromise may be agreed upon, and work proceed under a new schedule of prices, both parties conceding something—or, it may be that the general manager is inexorable, or that the employes refuse concessions. In either case the employes exercise their high prerogative, to quit work or *strike*. This done, the general superintendent introduces other men to take the places of those who have quit. The men introduced to take the place of those who have abandoned their engines, accept the reduced wages. That is their lawful right—and the laws will protect them in the discharge of their duties—and the old employes must submit. They have done what they could to maintain prices and the dignity of labor, and in this, they have had the law on their side. They have demonstrated beyond all question or equivocation, that they are worthy citizens, manly, self-respectful, loyal to law and order, and entitled to the confidence and esteem of their fellow-men.

The readers of the *Magazine* need not be reminded, that in the past, labor organizations, in numerous instances, have not been mindful of the rights of others, when they have believed their own rights have been invaded. Some of these organi-

zations have acted upon the theory that only members of labor organizations had a right to employment and, upon this theory, they have acted—and always to their own disadvantage in public esteem. The great public demands fair play. It recognizes a God-given, a constitutional and a statutory right on the part of all men to join or *not* to join organizations of any lawful character whatsoever—and for the exercise of this right the great public does not recognize the right of society, the state organizations, church or guild, to impose any penalty whatever—nor will the great public, the people, *en masse*, tolerate such penalties. No man is to be ostracised, exiled, reduced to a pariah, for exercising the rights of a citizen. He may choose for himself what is right within the limits of law, and no man should seek to compel him to pay any penalty whatever for the choice he may make.

Manifestly, labor agitations were never more ripe than at present. It is not to be assumed nor presumed that such agitations are meaningless, nor is it required to introduce surmises, that they are alarmingly portentous. Considerate men will survey the field and arrive at such conclusions as they may regard warranted by the facts, as they discover them. But this should be said, that the times are ominous of readjustments. There are vicious laws to be repealed, laws which affect labor to its great disadvantage, and laboring men, whether in or out of labor organizations, not only have a right, but it is their high duty to investigate, that they may vote understandingly upon such questions as relate to trusts, monopolies, combinations and corporations, which directly or remotely are designed to interfere with their interests, and that their influence may reach the highest point of potency, they should everywhere and at all times be found the unwavering advocates of the rights of man, without regard to his being or not being a member of a labor organization.

.....

Is the opinion of Judge Cooley, the Interstate Commerce Law will be strengthened, and that neither the long and short haul clause, the pooling provisions, nor any portion of the law will be repealed.

TERMINATION OF THE BURLINGTON STRIKE.

On January 7th, 1889, the strike on the C., B. & Q. railway system was declared off by the joint action of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen. The strike began on the 27th day of February, 1888, and being declared off January 7th, 1889, it follows that it continued 10 months and 9 days. The readers of the *Magazine* are well informed regarding the origin of the notable and now historic struggle, and still, it may be worth while to briefly recapitulate the more important facts which led to it. The real grievance, or that which bore the most heavily upon the engineers and firemen, related to wages. The C., B. & Q. paid their men less for the same work than was paid by other railways which centered at Chicago, and upon which the work was not more arduous, or the responsibility greater, than fell to the lot of the men who were in the employ of the C., B. & Q. In addition to this, the C., B. & Q. had established a system of classification which, it was contended, was unjust to the engineers, and the full significance of which was that it enriched the corporation at the expense of the men from whom fair pay was withheld.

To arrive at a settlement without a resort to a strike, strenuous efforts were made by the engineers and firemen; their grievances were presented in an elaborate schedule and the corporation was most respectfully asked to consider each specification, but such solicitations were without avail. The corporation determined at last to make no concessions that in any wise satisfied the just demands of the men, and its defiant ultimatum was without concession or compromise, to stand by its peremptory refusal to arbitrate the grievances of the engineers. As a result, the engineers and firemen, on the 27th of February, quit work. The question was then, Did they do right? Did they act wisely? and the same questions are still up for debate.

We do not hesitate to say that the general conclusion is that the C., B. & Q. has won a victory, or, in other words, that the engineers and firemen have been defeated—in common parlance, "whipped." The strike

has been declared off, and the conditions under which the men who quit the service of the C., B. & Q. will again enter the employment of the corporation, are practically unchanged. Necessarily, on the face of such facts, the conclusion is inevitable that the men, after a struggle of nearly one year, are defeated. But this is not all that can be said, or that ought to be said, upon the subject. There are instances on record in which the word "Victory" is but another term for "defeat," as was the case of the British at Bunker Hill, and of Xerxes at Thermopylæ. In discussing wars and battles, for the purpose of arriving at conclusions relating to combatants and issues, it is well to be precise. In the C., B. & Q. struggle we find arrayed upon one side a corporation thoroughly organized and equipped, and of immense financial resources—one of the great corporations of the times—and on the other side two Brotherhoods of wage-workers, two organizations whose only financial resources were their daily wages. It will be well to note, with some care, the parties to the contest. There they stand on the 27th day of February, 1888. The corporation, proud, arrogant, defiant, with splendid property, money by the millions, and confident. It had determined to grant no concessions, and it must be said, that it was plucky. As a foe it had immense proportions as well as resources. But it was not so colossal as to frighten the two great Brotherhoods who had challenged it to combat in defense of right and justice—the principle of fair dealing between employer and employé, a principle that must be asserted and defended if truth and justice are to prevail in the earth. We do not doubt, indeed we know it to be true, that there are those who deemed the strike unwise and ill advised at the start, and who now say "I told you so." In this there is nothing strange. It has been so from the beginning. The timid, the hesitating, those who predict defeat and are content with supineness, never did nor never will, help to rescue their fellow men from the enthrallments of oppression and degradation. The engineers and firemen who went into the struggle were inspired by sentiments such as have animated all men since the world began

who have had the courage of conviction and have sought as best they could, when opportunity offered, to emancipate themselves and their fellow-men from oppression. That in far too many cases defeat has been the result, will not be gainsaid, but that ultimate victory is to come is as certain as that God and Heaven and true and good men, are in alliance to enthrone, crown and sceptre justice and give it universal dominion in the world.

Whatever may be said of man's stolidity and mental obtuseness, he can be taught in the school of experience. Such lessons are ineffaceably engraven upon his mind, and if any one lesson has been taught by the C., B. & Q. strike, more important than another, it is that in "unity there is strength," and that for the purpose of securing and maintaining the right FEDERATION is the supreme requirement, the desideratum, and that with federation of all employes, victory, with all the desired trophies, is assured.

In the C., B. & Q. strike we have an example of moral heroism that it will be found difficult to parallel in these degenerate times, where men, as never before in the history of the world, worship with more than pagan idolatry at the shrine of Mammon. The man who prayed for

"A scourging tongue, a scorpion's lash,
To flay the backs of fools who worship cash,"

would now have ample opportunities to gratify his ambition, but his victims would not be found in the ranks of the Brotherhoods of Engineers and Firemen. These men, in the struggle with the C., B. & Q., sought diligently for the right, and believing they had found it, demonstrated their loyalty to conviction by deducting from their hard earned wages the magnificent sum of \$1,200,000, and giving it freely to the cause they had espoused, they set an example of devotion which cannot fail to challenge the admiration of honorable men everywhere. And be it remembered, to the everlasting credit of locomotive engineers and firemen, the giving of this great sum of money did not demoralize them; on the contrary, to their glory, be it said, it solidified the membership, and in a sense of transcendent significance, at the close of the struggle, the Brotherhoods are stronger than

ever before in their history. The storm has been fierce, and though the Brotherhood ships have battled long against adverse winds and tide, they came into port without the loss of a sail, a rope or a mast.

It affords us no satisfaction to state the disasters that have, during the struggle, overtaken the C., B. & Q. The victory (?) achieved by that corporation has been the dearest in the history of the labor struggles of the century. The corporation has lost on every hand. There is no necessity, nor is there any desire, to magnify the sum total of its financial disasters. It is modest to place it at \$10,000,000, and there are experts in such matters who place the sum vastly above the figures given. But more or less, the corporation will not again place itself in a position to duplicate its embarrassments.

In closing this article, which virtually closes the discussion of the C., B. & Q. strike in this *Magazine*, we are persuaded that it will prove in many ways beneficial to railway employes. It supplies an example of courage and endurance which will not be forgotten in a hundred years. It demonstrates that working men with a just grievance, and satisfied that they are right, will contend for the right regardless of sacrifices and yield only when further resistance would be folly, and it furthermore serves to impress upon organizations of railway employes the demand for and absolute necessity of federation, that strikes in the future may not occur, or if they must come in spite of friendly overtures, that they shall be so quick and decisive in their work that whether victory or defeat attends the effort, results shall be speedily attained.

In declaring the strike off it is generally believed that ultimately three-fourths of the old employes will regain their positions on the C., B. & Q. Many of those who will go in search of employment elsewhere, will be bearers of letters of introduction from the officers of the corporation. And just here we desire to say that all the Brotherhoods of railway employes should make it their special concern to help the men who so valiantly stood by their colors on the C., B. & Q. during the memorable struggle, to obtain employment, and that this help should be extended engineers, firemen,

brakemen and switchmen. To overlook or to neglect this duty would be cruel to the last degree. The C., B. & Q. has pledged itself to treat the men who left its employment honorably and the same treatment is due from the men to the corporation. The war is ended. The bugle no more calls to arms. Let the battle flags be furled.

THE FUTURE OF THE O. R. C.

In the January issue of the *O. R. C. Monthly* the question is editorially asked, "What has the future in store for the conductor?" If the future knows, it won't tell. The future is close mouthed; it don't blab, don't "shoot off its mouth." Still it is gratifying to see it stated that "during this last year" the question has been "thought upon more than ever before in the history of railroads." Manifestly, it is a momentous question. The railroads having "thought upon" it during the "last year," have concluded, in numerous instances, to put "spotters" on the track of the conductor, and about eighteen hundred of these trained "ferrets" are following the brass buttoned and nickle punch brigade on thousands of miles of railways in the United States. In that way the railroads are giving conductors a "recognition" of wonderful significance, which, to some extent, answers the query relating to what the future has in store for the conductors. The activity in the "spotter" business is a sort of recognition not well calculated to bring "about a better feeling between employer or employé." It may be true that employer and employé "have been benefitted" by the spotter. At any rate the "employer" must be benefitted or he would not employ the sharp-nosed and keen-eyed hounds to dog the conductor and place his reputation and character, all that is dear to a man of honor, in the hands of men who have earned the detestation of decent men throughout the world.

The *Monthly* says "the conductor is of a naturally retiring disposition" who "has been, from his first step in railroading, trained to obey without question the orders given him." And still, the employer finds that the conductor is not sufficiently *retiring*, and so he puts spotters on his track, and upon

the report of the trained hound, *retires* conductors by the score.

The *Monthly* facetiously remarks that the conductors, during the past year, have moved up and are now "a little nearer the throne than they have ever been before." That is certainly encouraging. To stand near the throne is a great honor. To wear throne toggery, to receive the smiles of the king, and his courtiers, to mingle in the aristocratic throng; gods! that is fine! What next? Gold buttons and a gold punch, an exchange of blue for royal purple. And still, the complaint is, why don't the railroad companies manifest their appreciation of conductors by taking them "into their confidence?" Manifestly the conductors are not sufficiently near "the throne." Spotters will have to be dismissed, before the conductor will be taken into the "confidence" of the companies. And yet, says the *Monthly*, the future "is full of hope, and the prize, a fair recognition of services and just compensation for labor performed, hangs ready." But the prize is too "altitudilum" for the conductor, it is the one persimmon that the conductor's pole can't quite reach; when he gets a "little nearer the throne" he may grasp the prize.

Now comes the robust declaration that the article to which we have made reference, was not written for the benefit of "railway managers," but for conductors. Such a declaration will not push the O. R. C. a "little nearer the throne" and it may result in the employment of more spotters to note the movements of the punch and where the nickles go.

Now comes the climax. "The conductor of the future will be a man of large experience, well versed in all things pertaining to his calling, an honored citizen, a man without reproach, enjoying the confidence of his employer and respected everywhere." But what of the conductor of the present? Thousands of them are honorable men, who are in alliance with their co-employés on the railways of the country. They will not remain in the O. R. C. under its present policy. The edict has gone forth, the revolution is already inaugurated.

The manifesto recently issued by the new Brotherhood of Railway Conductors, which

will be found elsewhere in our columns, vividly foreshadows the future of the O. R. C. It is a declaration of independence. It is an arraignment of the old O. R. C. upon the charge that it is not in sympathy with other organizations of railway employés, and that its influence has been exerted to establish and perpetuate wrongs and injustice; that it has been the willing tool of corporations, and has lent itself to the abominable business of scabbing to defeat the just demands of working men, and such facts being established beyond all controversy, its existence ought to terminate.

We have anticipated such a movement. It is in consonance with the logic of events. It is in the right direction. Its influence will be of the very best. The conductors who have gone into the movement are men of moral courage. The *Monthly* says of conductors that they are "trained from their first step in railroading to obey without question the orders given them," and that this obedience "becomes a second nature," and that conductors "often suffer in mind, body and pocket because of this trait of character." There was never a more humiliating confession made. If it is true, it accounts for the degeneracy of conductors when they obey the orders to scab, to commit a flagrant wrong against their coemployés, and tells in trumpet tones that the new order of O. of R. C. was demanded to rescue railway conductors from further degradation. The *Monthly*, in closing the article to which we have referred, charges that railway officials have treated conductors "as a part of the machinery to carry out certain schemes of their own." That is doubtless true, indeed it is undeniably true, and the treatment will be continued unless the conductors protest, and cease to obey orders that sink them to the most abject condition of serfs. The new Order of Railway Conductors proposes to inaugurate reforms, to assert their manhood, and to rescue the old O. R. C., if possible, from being "a part of the machinery" of railroad corporations to perpetuate injustice upon their employés. If this cannot be done, then the new order will include, at no distant day, the conductors who have the courage of manly convictions, and will take its place in the front rank of the labor organizations of the age.

FEDERATION.

We have no hesitancy in declaring that the stability of American institutions depends upon the enactment of such laws and in the adoption of such a policy as will secure justice to labor.

The affirmation that labor creates all the wealth, and that from labor all the revenues of nations are derived, requires neither qualification nor apology.

To withhold any rights which in the nature of things belong to labor, is a wrong for which there is no palliation. It is in itself a crime. It is more prolific of ills than the fabled box presented to Pandora by Jupiter. It is a crime in whose infernal womb there are forever quickening into life ills, compared with which, nature's forces, whether above or below the crust of the earth, in their most destructive displays, become almost meaningless. Nor do we exaggerate, if to these are added all the scourges, which from time to time create woe and lamentation, and fill the mind with horror.

It is a fact, disguise it as we may, that "an injury to one is the concern of all." It is made so by the "brotherhood of man" and the "fatherhood of God." Treat it as fable or fact, it matters not, Cain's crime has concerned all people, tongues, tribes and kindred, since the date of that fratricide. It stands for an example—nor has the blood of Abel ceased crying from the ground. It is so ordered. It is the law. No mortal stab of man was ever feloniously made which did not open a "poor, poor dumb mouth" into which fate put a tongue, that it might harangue the world forever against the crime of murder. But there are crimes, compared with which, murder is a benediction and deserving all the wealth of rhetoric. Take an eviction in Ireland, made by the sanction of law, and executed by creatures of the law—old men and old women, bending beneath the weight of years, innocent youth, and helpless infancy, mothers in the pangs of parturition, thrust into the road to suffer and to perish. Such crimes are worse than murder, and are the concern of all, though all may not feel concerned, but when such infamies are perpetrated humanity receives a shock; they touch the nerve centers of nations. The

human family is one. There is a bond of sympathy between all nations. The man who steals a man and sells him into slavery, commits a crime against all men. If a wrong is done to the humblest American citizen by any foreign power, it becomes the concern of every other American citizen, and the resources of the Republic are pledged to redress the wrong.

In discussing federation, we presuppose the independence of the federating parties—but, which, nevertheless, have certain interests in common, and that the supreme purpose of federation is to protect such common interests. The original thirteen American colonies were absolutely independent of each other. They existed by virtue of distinct charters, but they had certain interests in common, and when these interests were menaced and attacked, they federated for mutual protection, and with federation they won a victory, and secured blessings, in the presence of which hyperbole sits dumb—and yet, every colony retained in its autonomy, its power and rights of self-government.

Labor organizations—we refer specially to those connected with the railway service—have found in the past, find now, and are likely to find in the future, certain interests, alike common to all, in jeopardy. The menace is perpetual, and attacks upon their rights, frequent and often exasperating. In the maintenance of their rights, labor organizations have found that separate action was, as a general thing, a delusion and fruitful only of disaster. The lessons of experience have convinced those capable of analyzing the situation that security lies in federation.

But the fact need not be disguised, that there are obstacles in the way of immediate success, and it is in the line of prudence, to name them and estimate their obstructive, their hindering power. In this discussion, it will be well to inquire what motive prompted railway employes to organize? or, rather, was the obtaining and the maintaining of just wages, one of the inciting purposes? If it is found that any of the organizations of railway employes ignores the question of wages, or, is content with such wages as employers may see

proper to pay, such an organization cannot be expected to federate with another organization which makes honest wages and just treatment bed rock propositions. If there is an organization of railway employes, whose members, at the behest of corporation officials, will “scab”—divest themselves of manliness, of self-respect, of independence, and voluntarily become the cringing, fawning tools of the enemies of workingmen, in their honorable efforts to secure and to maintain their rights—we say, if there is such an organization of railway employes, it is not expected that it will federate with any other organization for any honorable purpose whatever. It will be found wanting in brains, in spine, in *sand*. Its predominating characteristic is that which distinguishes the serf—it is serfdom. It permits others to create conditions to which it yields as uncomplainingly as an ass to its burdens and blows. Only such organizations will federate, as will not “scab”—as will not abdicate any right, human or divine—unalienable, constitutional or statutory—whose members know they are sovereign citizens, and feel ennobling, vitalizing thrills of independence, who organize, federate and work, not only for their own good but for the welfare of others. Such organizations of railway employes, as favor federation, take an eminently wise view of situations and surroundings. They have self-respect without vanity, courage without false pretense, and in advocating federation, make no surrender of allegiance to the parent organization. They do not arrogate to themselves any superiority over other organizations; they recognize the fact that as employes in the railway service, while engaged in promoting their own welfare, have certain interests in common with other organizations, which can be fully protected only by federation, a fact, so clearly demonstrated by experience, as to render argument unnecessary.

The ultimate triumph of federation hinges upon the final result of the conflict between truth and error, right and wrong, education and ignorance. So far, no valid objections have been brought forward. The wrongs which environ railway employes are numerous, often flagrant and degrading.

Insufficient wages when earnings are large confront employes in every direction. None are overpaid, while thousands are underpaid. Men are discharged to gratify the malice of some official, whose arrogance can be placated only by a serf-like submission and degradation—and the black list has been introduced to compel men to choose between humiliation and idleness. To correct, or at least, to mitigate such evils railway employes organize. That good has resulted in many instances is not to be questioned. But the evils have not disappeared. The right has not triumphed. Labor has not utilized all its resources. Peace has not been declared, and the battle is still on. There is hope in federation—in combining the strength of all for the good of all. It is rational. The more it is discussed, the more the facts are brought out, the more convincing becomes the argument. Time and truth are in alliance. Only the right was born to live. Let the work of agitation and education go forward. Nothing is so fatal as stagnation. The Brotherhood of Locomotive Firemen stands pledged for Federation and this *Magazine*, as its organ, will not *misrepresent* its noble purpose. The truth is iconoclastic. Neither idols nor images, nor shams of any class or character can expect exemption from its eternal hostility.

The sun of labor is rising grandly to the zenith. The boys of to-day have advantages which their fathers did not possess. The educating forces have multiplied in a ratio that defies exaggeration. Organization is progressing, and federation is coming, and it is coming to stay. It will establish arbitration and enthrone justice, and finally relegate strikes to the limbo of extinct measures of redress

We invite the attention of our readers to the communication of H. J. Fackenthall, Esq., a locomotive engineer, a member of the B. of L. E., and a delegate to the late Richmond Convention of the Order. It will be observed that Bro. Fackenthall has very pronounced opinions upon certain matters which he does not hesitate to say are of vital importance to the B. of L. E. In this we fully agree with him. The communication is of more than passing interest and furnishes food for thought and study.

LABOR VS. LABOR.

We have given the title of a case which has been before the tribunal of last resort for a number of years. In very many regards the case is unique. Labor prosecutes and labor defends. Labor makes charges and labor denies. The spectacle is at once exasperating and humiliating. It presents labor before the country in a position well calculated to excite disgust. On the one side labor comes into court demanding recognition, justice, fair dealing, righteous decisions. On the other side is beheld the degrading exhibition of labor in alliance with ignorance, prejudice, jealousy, envy and every conceivable mental and moral weakness, with its paid attorneys, for the purpose of resisting progress and to maintain a *status quo*, or, worse still, to compel labor to recede from advanced positions, and make the confession that for the privilege of living, it must cower and crawl at the feet of its oppressors.

We have stated the case fairly. We have not overdrawn the picture. Indeed, it would be difficult to make it justly repulsive. In the foreground is intelligence, manliness, conviction and courage. Strong men, champions of a great cause, men capable of solving problems in law, labor, statesmanship, economics—pathfinders, men who comprehend policies and conditions, and who grasp the central, pivotal idea that the emancipation of labor from its debasing thraldoms must come through legislation, rather than anarchy, socialism and the theories of cranks.

Such men recognize the power of political parties for good. To denounce political parties in a government of the people, by the people and for the people, is to denounce the government itself. We say here, what we have often said in these pages, politics is the science of government. Political parties necessarily result from free speech and a free press. The Czar of Russia, the Sultan of Turkey, the Shah of Persia and some other autocrats do not tolerate free speech and a free press, and within their gloomy realms, political parties which antagonize the sovereign's political ideas, usually perish in the act of accouchment or very soon thereafter. In the United States of America, the people are sovereign—they make and unmake

rulers, constitutions and laws—and the men who labor, wear crowns as kingly as the men, who, under unrighteous laws, live and grow sleek and fat by exacting tribute from toil.

The advanced thinkers in the army of labor, comprehending the issues, declare that the cherished hopes of labor are to be realized only by electing workingmen, men identified by their calling with labor, to positions in legislative bodies, where they can by speech and vote, do something towards ameliorating the condition of the working classes. To carry out this idea, men belonging to the ranks of workingmen, are sometimes put in nomination for legislative positions. Occasionally a workingman is elected, but as a rule, they are defeated. Why? Chiefly because workingmen refuse to vote for them. They are swayed by jealousy, by envy, by rivalry, by prejudice, by ignorance, or by old party affiliations, and in many instances, doubtless, by bribery. In any event, there is no appreciation of the issues, and no regard for their own welfare or the welfare of their co-laborers, and thus it happens, that year after year, the opportunities to assist labor to reach higher positions, are forever lost. Cases in point are numerous, and the recent election in Illinois supplies notable instances in which labor antagonizes labor to an extent which defies exaggeration. Illinois has upon its statute books a conspiracy law known as the Merritt law, specially designed to crush and degrade labor, to fix an intolerable stigma upon workingmen and which every workingman, who is not by nature a scab, a loathsome lickspittle, an abhorrent parasite, wanted repealed, and the candidates for the legislature, nominated by workingmen, were pledged to work for the repeal of the law, and yet, they were defeated, defeated because workingmen were totally incapable of rising above their prejudices, of casting a vote which declared for emancipation. It was a case of "Labor vs. Labor," in which labor put forth noble efforts to cover labor with honor and glory, and in which labor, on the other hand, massed all of its resources of ignorance and prejudice, and defeated labor. As a consequence, the odious law will stand and labor will suffer.

Again, Chicago is the home nest of that in-

famous breed of vermin, known as the Pinkertons, creatures whose mission it is to murder defenseless workingmen with or without the word of command from their cutthroat superiors, and which is always done in the interest of those that oppress labor. The candidates of the workingmen of Chicago were pledged to put a stop to the Pinkerton business, if such a thing were possible, or, if there were those who favored continuing the operation of the thugs, to compel them to put themselves conspicuously on record. But they were defeated by the jealousy and the prejudice of the workingmen, a vulgar opposition for which only ignorance and stupidity can be pleaded in extenuation.

To still further fortify the position taken, that labor defeats labor in its efforts to better the condition of all, we refer to the action of laboring men in Iowa. The demand in that state, where railroad interests are of commanding importance, was to have on the Board of Railroad Commissions, a practical railroad man. In Mr. H. E. Wills, a practical engineer, the right man for the important position, was found. A man, in all regards eminently capable. He possessed the mental grasp required. He had large experience. He had been for years a student of the railway service. His integrity was known of all men and was unquestioned, but he was defeated. Railway employees whose interests he would have protected, withheld their support. They did not rally to his standard. Their prejudices blinded them. They could not bear to see one of their own number elevated to a responsible position. It aroused in them feelings peculiar to narrow minds, and the fact that one of their number had the required capabilities for a responsible office in which he might be of service to them and to the state, was productive only of envy, and they preferred to submit to wrongs and humiliations rather than to be rescued from oppression by a co-laborer, who, by the proper use of his faculties had won distinction.

It is this ceaseless antagonism that keeps the noses of the workingmen eternally on the grindstone of poverty. It is prejudice, the legitimate spawn of ignorance, and it helps monopolists, and those who grow rich

upon the surplus earnings of workmen to inaugurate, perfect and carry out their schemes of oppression and degradation.

Shall we have a change? We do not doubt it. We have not lost faith in human nature, nor in the emancipating power of education. The children are to be wiser than their fathers. The Jews, redeemed from Egyptian bondage, sighed for their "flesh pots" and would have willingly gone back to their tasks. Of these countless multitudes, only two were fit for freedom, their inheritance; the rest, beyond the power of conversion, were to die in the wilderness. For workmen there is a "promised land," there is redemption, emancipation, disenfranchisement. The educating forces abound, are invincible. If the old can't be converted they can die. The victims of ignorance, envy and prejudice, may bend their backs or kneel down to receive their burdens, but as certain as rivers flow to the sea, the young men will resist. Labor is organized; it is reading and debating; it is solving problems; it is grasping questions of vital interest, and after a while it is going to *federate*. There is to be a Labor party. The vulgar clap-trap about politics is rapidly running its course. The men who use it are of the class who think they can drown the roar of Niagara by tooting a tin whistle; who go hunting for bear with squirt guns, and who, having outlived their usefulness, can obtain permission to end their no longer useful lives without delay or regret.

Discussing what appears to be an unpardonable mistake, that of burning an engine, the *Locomotive Engineer* says: "When a man burns an engine through incompetency, gross carelessness or intemperance, he needs discharge, expulsion and disgrace; but if a man with a good record as a runner makes a mistake, is overworked and goes to sleep, or is deceived by changed conditions, or hampered by inferior boiler feeders or bad water, he does not deserve the lifelong punishment he receives." When a man is "overworked" to punish him for any dereliction of duty is a crime. When a man is overworked, every law of his physical being pleads in trumpet tongues, not for pardon, but for acquittal.

THE BROTHERHOOD OF RAILWAY CONDUCTORS.

Considering the policy of the O. R. C., it has required no soothsayer to arrive at the conclusion that it must either change its policy or make up its mind to lose power and prestige. We have time and again, in the columns of the *Magazine*, and in the most friendly spirit, warned the Order and its organ, the *Conductor's Monthly*, of coming events, of the inevitable, but as none are so blind as those who won't see, the old policy, in defiance of common sense and sound judgment, was seized with a firmer grasp, and as a result, consequences predicted have followed, and another Order of Railway Conductors has been organized. We have before us the prospectus of the new organization bearing date of November 15th, 1888, and quote so much of the document as will afford our readers an idea of its purposes:

LOS ANGELES, CAL., November 15, 1888.

GENTLEMEN:—It being generally understood by the railway conductors of the United States, Canada and Mexico, that the present status of the O. of R. C. wholly fails to meet the requirements of organized labor, and in promoting that harmony which should exist between railway conductors and other organizations of railway employees, especially that of the Brotherhood of Locomotive Engineers, and it has been deemed expedient and a move has been entered into by the conductors of the western country, especially those on the Pacific coast, whereby an organization has been effected to be known as the Brotherhood of Railway Conductors of the United States, Mexico and Canada, whose object is to promote and protect the interests of railway conductors generally.

The foregoing tells the whole story. The old O. of R. C. having totally failed "to meet the requirements of organized labor, the new Order, the Brotherhood of Railway Conductors of the United States, Mexico and Canada, has been formed, and at the latest advices, December 26th, sixty-nine applications for charters of subordinate divisions had been applied for. That this should have been accomplished in the short space of *forty* days, demonstrates, beyond all controversy, the absolute necessity for the new Order.

That labor should organize for the benefit of labor, is a proposition, too self-evident to require argument, and when labor organizes to injure labor, to defeat labor in its efforts to secure simple justice, such an organization, whatever may be its fate, cannot retain in its membership, the friends of labor.

Such friends of labor in the old O. of R. C. will naturally and inevitably drift to the new Brotherhood of Railway Conductors.

It is not required for us to state that this *Magazine* hails with undisguised satisfaction the organization of the Brotherhood of Railway Conductors of the United States, Mexico and Canada. Coming as it does, when federation is demanded for the elevation and prosperity of railway employes, it becomes cheerily significant. It voices sentiments of harmony and unity, and strengthens faith that the day is not distant, when all the organizations of railway employes will be united in the bonds of federation to promote the welfare of each and of all.

We suggest to locomotive firemen, members of our Brotherhood, that they can do much to promote the interests of the Brotherhood of Railway Conductors in many ways, and certainly by seeking opportunities of calling the attention of conductors to the position occupied by their Brotherhood towards the new Order, and upon the subject of federation, as also to the fact, that the *Magazine*, the organ of the Brotherhood, is zealously endeavoring to aid in promoting the success of the Brotherhood of Railway Conductors, whose Grand Lodge is located at Los Angeles, Cal., and whose Grand Officers are as follows:

W. A. Osgood, Grand Chief Conductor; W. O. Mohler, Assistant Grand Chief Conductor; A. W. McLean, Grand Secretary and Treasurer; W. J. Bigelow, Grand Senior Conductor; G. H. O'Dell, Grand Junior Conductor; T. B. Whiteside, Grand Inside Sentinel; J. E. Hartell, Grand Outside Sentinel, and W. M. Usher, Grand Chaplain. These officers are gentlemen of the highest repute, and their names guarantee that every movement made will evince unwavering devotion to the interests of organized labor. Should any of our readers desire to correspond with the Grand Lodge B. of R. C., the address of the Grand Secretary and Treasurer, A. W. McLean, is Los Angeles, Cal. P. O. Box 935.

IMPORTATION OF LABOR.

General F. A. Walker has written an article for the *Scribner Magazine*, in which he discusses the "labor malady," and in which he puts forth the idea that the "working man must hold his own against the pressure of competition, and have enough character to prevent either his degradation by inadequate wages, or the paralysis of business through unreasonable demands upon capital, but he says: 'I have never known any considerable body of laborers, essentially Americans, of their own motion, without instigation and impulse from some organization of which the moving force was an alien one, make or insist upon an altogether unreasonable demand, or proceed to wrongful measure in enforcing even reasonable demands. Will some one point out such an instance, if he can?' The dangers of our labor agitations arise from what is foreign and un-American in its character. Our foreign population must be thoroughly Americanized, and be taught that fairness and moderation that has distinguished the American voter since the earliest days of town meetings and self-government. They need that political education which is the American's inheritance from the fathers of constitutional liberty."

It will occur to numerous readers that on the part of many who have controlled large industrial enterprises, the purpose has been to alienize such industries by the importation of aliens, because their services could be obtained at lower wages than Americans would accept, and in no section has this work so essentially anti-American been carried forward with more crushing vigor than in New England, whose industries at one time not very remote, were in the hands of the natives of that section, but who have been driven out by the mercenary greed of those who have controlled its manufacturing enterprises. Hence, if what General Walker says is true, American workingmen are not responsible for the wrong complained of. In this connection it will not be forgotten that one Massachusetts shoe factory imported from California about 200 Chinese to take the places of white men, because they could be utilized in the manufacture of shoes at wages which no man, native or alien, would accept.

THE curvature of the earth is such that a straight line a mile long would be 2.04 inches from the surface at either end.

This work of employing aliens, because they would work cheap, has been going forward for years, and has been attended with deplorable results. General Walker insists that "our foreign population must be thoroughly Americanized," and this is just what has been going on—in ways that General Walker should have noticed and explained. The alien for a time accepts degrading wages, but he soon discovers that American citizenship elevates and dignifies all who come under its influence. That it means a house instead of a hut or a hovel. That children must be educated, decently clothed and fed upon wholesome food. The alien, after a brief sojourn, becomes a citizen, has the ballot, a voice in public affairs, something unknown to him in the despot-cursed land from whence he immigrated, and as a consequence he expands and demands higher wages necessary to meet new and more exalted conditions. In all of this he is "Americanized," and those who are so anxious for him to come, are quite as anxious for him to go, but he has come to stay. He is no longer an alien. His children are American born and he demands more pay. His coming displaced the native born workingman, but having been Americanized by forces he could not resist, he demands an advance of wages. His coming was of but little service to himself, it was a calamity to the American workingman he displaced, the advantage accrued only to the employer, and now, that he demands more wages the employer complains. What is it to Americanize an alien? What does General Walker mean when he talks about thoroughly Americanizing foreigners? The American wants fair wages for a day's work. An American workingman is a citizen, with the ambitions of a citizen, and to thoroughly Americanize an alien is to bring him into full sympathy with American ideas. He will not remain degraded. He will not work for wages that barely keep soul and body united, and the more thoroughly he is Americanized the more tenacious he will be of his rights and the more determined to maintain them. American citizenship in its influence upon workingmen is poorly comprehended by men who write of American

workingmen. They are daily growing in intelligence and in that power which intelligence confers. They ask for their full share of the wealth they create and will from time to time adopt such measures as they deem advisable to secure their rights, but finally their success will depend upon the ballot, the enactment of righteous laws and the appointment of an honest judiciary. Then trusts, combinations, pools, syndicates, monopolies and such things as now disgrace the country will disappear and the name of America will everywhere suggest justice to workingmen.

ANTI-PINKERTON LEGISLATION.

At the Biennial Convention of the Brotherhood of Locomotive Firemen, held at Atlanta, last September, a committee of three was appointed, whose duty it was made to devise ways and means to bring the astounding infamy of Pinkertonism to the attention of the Legislatures of the various states, at the earliest practicable day.

In the performance of this duty, the committee has sent out two circulars, one to each Lodge of the Firemen's Brotherhood, and one addressed to the public, to all organizations of workingmen, setting forth the crimes committed by organized and armed Pinkerton thugs, mercenary scoundrels who, when employed by corporations, in the name of protection have perpetrated crimes as murderous and as nefarious as any that blacken the criminal records of the country, and these crimes are always perpetrated upon defenseless workingmen who, goaded to desperation by degrading oppression, have sought to obtain wages for their work which would suffice to afford themselves and those dependent upon them, the bare necessities of life. It is authoritatively stated that the Pinkertons number 5,000 men, they are uniformed and equipped with the best Winchester rifles, and when wanted to do the bidding of any soulless corporation, they are brought forth, and proceed to do their devilish work, which is frequently of such a blood-thirsty character as to horrify whole communities, and is always directed against workingmen.

The imperative demand is that laws shall be passed by the Legislatures of the various states, absolutely forbidding the employ-

ment of these Pinkerton mercenaries, under any circumstances whatever. It is an organization of military mercenaries unknown to the laws of the land, an organization under the control of private citizens, whose immense annual income, derived from the criminal operations of a lawless, characterless gang of creatures raked from the slums of cities, enables them to exercise powers such as the people cannot contemplate without feelings of abhorrence, and such as the laws do not confer upon any of the civil or military officers of the country.

The suppression of these Pinkerton thugs, this villainous gang of mercenaries, under the control of Bill and Bob Pinkerton, is demanded by every consideration of law and order, of the peace of society and of good government. To longer tolerate the vile aggregation of men who perpetrate crime for pay is to inaugurate anarchy. In the name of law, they violate law, human and divine. In the name of order, they assail the inalienable rights of citizens and bring about chaos. They are a menace to all things of good report and live by practices which reduce government by the people to a miserable burlesque and mantles every manly cheek with shame and humiliation. To rid the country of this shameful curse an appeal is to be made directly to the Legislatures of the various states. The interests, the rights, the security and the lives of the workingmen are involved. The question is, will the workingmen of the various states unite and demand of their representatives the enactment of laws that shall effectually suppress Pinkertonism—disarm and scatter the vile wretches and make the employment of villains a felony! If workingmen cannot unite upon a proposition of this character, in the name of all things just and right upon what question can they unite? Believing that unity of action can be had, what is the course to be pursued? In reply, we suggest and urge upon workingmen throughout the land, regardless of organization that they unite and determine upon the passage of a bill to be presented to the various Legislatures, which will have the effect to suppress the Pinkerton business everywhere, a bill that will make the organization treasonable and its acts felonies, the purpose being its extermination.

Let the workingmen of each state organize by counties or in any other feasible way and have the bill prepared; let it be placed in the hands of a reliable representative who will have it referred to the right committee, or to a special committee with instructions to report. Have a committee of intelligent workingmen appointed to watch the bill in all its stages—to see that it is not pigeon-holed nor suppressed by any of the tricks of legislation, but that it is brought forward and acted upon, and to note particularly who champions the bill, and as particularly who opposes it. Let the *ayes* and *nays* be demanded on all occasions when proper, that workingmen may know their friends and their enemies, and that their action may be kept in vivid remembrance for future rewards or penalties. There is no party politics in the movement, only good government and the protection of the rights and interests of workingmen.

Those who may desire information upon the subject are requested to write to J. F. Bryan, secretary of the committee, lock box 319, Creston, Iowa, who will promptly respond to all letters received.

We regard the subject of great importance and hope to receive information from Lodges showing that an active interest is taken in it, and that aggressive measures have been adopted to secure from Legislatures the right sort of legislation.

We desire to impress upon the mind of every Brotherhood fireman the importance of promptly transferring his policy of insurance in all cases where the oversight can possibly warrant a claim other than that specified in the policy. As for instance, in the policy as issued, the beneficiary is the sister of the fireman; subsequently he gets married and desires that his wife shall be the beneficiary, but fails to make the transfer as provided by the laws of the Order. In such a case, should the fireman die, the money would be paid to the sister. There is absolutely no escape from it. A failure to attend to the matter involves the Grand Lodge in great trouble. One law suit is now pending involving the point stated, and other cases are awaiting settlement. The importance of the matter is seen at a glance.

MY OPINIONS.

If I may presume to offer to the B. of L. E. at large, my opinions on a few vital points which were slightly ignored at our twenty-fifth Annual Convention, and thereby change the current of popular ideas and old fallacies somewhat, and get them out of the old rut into which they have moved for a quarter of a century, and in their place introduce the vital progressive ideas of the present, I shall feel content.

In the first place, we as representatives of the B. of L. E. at Richmond, failed to realize the fact that we are living in a progressive age, an age in which all manner of business enterprises are being pushed forward with a vigor and energy hitherto unknown. The great tidal waves of progress rush along with resistless power, requiring capabilities of a high order, if men would escape wreck and ruin.

Now, though it may be painful to make the acknowledgment, the truth stands out in bold relief before the world, we are no longer, in ourselves, all powerful. We are no longer capable of withstanding, unaided, the assaults of avaricious, capitalistic power.

The time was when our glorious Brotherhood sailed triumphantly through stormy seas alone and reached the haven of success. But that was when storms were less frequent and when there were fewer pirates, and Pinkerton bloodhounds, and when the press was not a subsidized agent of monopolies.

It must be admitted that we have been sailing, more or less, at ease for twenty-five years, without sustaining serious inconvenience, and enjoying the glory of our independence. But finally we struck a "Stone" and have been compelled to ask for aid from other organizations. The request was granted and nobly have they stood by us and they have suffered much in our behalf, and I believe, judging from the signs of the times, that our only safety in the future lies in forming some treaty of cooperation with all labor organizations, for, mark the fact, our antagonists are firmly allied, and will go to any length to overpower us.

All who attended the Richmond Convention know that a very fair and perfectly safe plan of cooperation was carefully drawn up and offered to that grand body, and that it was flatly rejected. But a moment's reflection will convince those open to conviction, that revolutions force themselves upon the people, and now, mark the prediction, cooperation will come, whether we want it or not,

and the grand mistake lies in not meeting necessity half way at Richmond, and by our action, trying to postpone the inevitable, to have it forced upon us in perhaps a less desirable form than was offered.

Arbitrary law, in the government of our organization seems to be the great stumbling block in the way of intelligent legislation. Any law that is not arbitrary is without force and becomes a dead letter. And now mark the brilliant inconsistency at Richmond. A resolution was offered to repeal a certain law which had been enacted at a previous Convention, and which was a just and righteous law, because it had secured a glorious victory for our Brotherhood over one of the gigantic railway systems of the country, which had aimed at us a deadly blow. And because some of our unholy members violated their obligations and were expelled, the Richmond Convention set it down as arbitrary and repealed it, thereby turning a signal victory into inglorious defeat and establishing the precedent for brothers to sin against God and man and then demand forgiveness without repentance, for not one of the offenders has repented, but are all eligible to reinstatement while clothed in their ignominious sins. And yet that obnoxious law which compels a man to withdraw from the B. of L. E. to become a member of the B. of L. E., and which is destined to destroy the Brotherhood of Locomotive Engineers, was not sufficiently arbitrary in the estimation of the Richmond Convention to be repealed. You may doubt that such a law will destroy the B. of L. E., but if you will study the lessons of physical vitality, you will find that the blood, which is the vitalizing agent of your physical body, becomes impoverished and fails to fulfill its purpose unless sufficient nourishment is given to it, and just so it will be with the B. of L. E. Any law that prevents the infusion of young blood into our ranks is destructive to the system of our Brotherhood. That law is a deadly poison and its only antidote is repeal.

I am not a member of the B. of L. E., nor was I ever a member of that Order, but my acquaintance with the men satisfies me that the B. of L. E. is composed of men whose intelligence and character, wit and wisdom, would add greatly to the efficiency of the B. of L. E. if only this arbitrary and detestable element, was true to its convictions and had the moral courage to repeal that law and bring members of the B. of L. E. in where they belong and it is my opinion we will have to do it, or, in time, be called upon to rue the mistake.

We have greatly increased our liabilities, by what I consider very injudicious work. First, we throw open the door of our life insurance to men of any age. Secondly, we add another \$1,500 policy to the amount of

our insurance, making a total of three \$1,500 policies, or \$4,500, a nice little sum for a mutual insurance plan. But as I am a young man, and physically sound, I am inclined to count the chances for my family, say, twenty years hence. Now, our Brotherhood is twenty-five years old, and we are twenty-five thousand strong, but our insurance association is only seven thousand strong, and if the other eighteen thousand, from whatever cause, have not joined our insurance under former laws and specifications, which were more advantageous (looking at it in a pecuniary light), than it is under the present plan, will many of them join it now? And as long as any obnoxious laws exist, keeping out young men, where, I ask, is the value of my policies to come from, say twenty years from now.

It looks to me, from a business point of view, like a good investment to discourage young men, and a cheerful contemplation, too. However, it is not yet too late to amend the evils.

If some manufacturing firm would furnish the next Convention with about a thousand improved muzzles, accompanied by as many automatic buck and gag arrangements, and send a man along to adjust them, then perhaps, with about four hundred of the delegates securely muzzled, bucked and gagged in the remote parts of the Convention room, and the Grand Chief armed with a long handled maul with which to smash a few of the ever present, always upright legislators, who constantly stand around the rostrum and assail the Chief in tones so loud that we smaller fry can do no good at all, then, and not till then, in my opinion, can much good be accomplished.

I never expect to attend another Convention as a delegate, but for the information of aspirants to such honors who have never been there, I will simply say, take a carpet tack with you, or, better, take two, for your next neighbor won't have any, and you will have no peace until he gets one. Of course you do not have to sit down on the tack, but it is necessary to secure your rest in Convention. When the tack has been properly driven, be quiet, sit down, be in order. Then, if you are an expert at abbreviating, or you are a shorthand writer, if you can listen to and understand eleven or nineteen men all talking at once, can take down correctly all that is said, can help to lay every good resolution on the table without debate and can parley for an hour over some incidental motion, and between the acts hit an unsuspecting brother in the eye with a spit-ball, and accomplish this last act undiscovered by the Grand Chief, you are then a full-fledged representative, and it is my opinion your Division will again send you as a delegate to the next following Convention.

H. J. Fackenthal

CONSERVATISM AND LOVE OF CHANGE.

No marked innovation, however great the advantages it promises to mankind, has ever been carried to success without overruling much opposition. Whether it be a labor-saving device, a means for facilitating travel, or a beneficent cure for the ills of flesh, there are always people to block the wheels of progress and throw obstacles across the track, crying timidly that the old methods are best, and that new ideas are necessarily dangerous; they wag their heads gravely and vow that they have no fancy for burning their fingers with experiments. Their "petty hoard of maxims" come into play as they deplore the rashness of the young, and, indeed, they have all proverbial philosophy on their side of the argument; for youth never stops to put its wisdom into words. The enemies of novelty forget that "he who will not use new remedies must expect new diseases," and that which is a valuable truth during one epoch may be a useless piece of lumber when a new era has dawned. They will never plant on virgin soil—others must break the ground. The professions have much reason to be grateful to this bondage of custom, for, through his dread of fleeing to evils that he knows not of, we often find a man enduring extortions and abuses, or clinging to a doctor who physics him to the verge of the grave. Now and again, we find one whose youth of heart has survived the effect of actual years. The sap in his veins has not "hardened into wood," but it is as rare as to see a peach tree blossoming in December. Such a man is an alien, belonging to neither age, treated with patronizing toleration by his juniors, and regarded with distrust by his contemporaries.

It is in middle age that conservatism has its stronghold. Musty doctrines are never found beneath a young thatch of golden curls. The "sprightly juvenile," is a fervent advocate of all that is new, and his ardor is often helpful in pushing forward great causes. He loves change for its own sake. He would like a journey every day; hastening from point to point, with no other object in view than the act of motion. The noisy life of the hotel, the shrieking whistles, the abandonment of daily routine, and the utter disarrangement of a settled order of things are dear to his soul. A decorous procession of uneventful weeks and months strikes hard upon his restless spirit. Even the domestic upheaval entailed by a change of dwelling place is not unwelcome to him. The confusion of household goods gives him no sense of discomfort, and he is diverted by the hollow echo of his own voice and footsteps through the empty rooms. That very sound strikes gloom into mature minds, perhaps some premonition of the last dark change, the last narrow house.

Standing "at the top of happy days,"

youth looks out across a mighty plain, as green as Eden, bathed in sunshine and watered by a thousand streams; while on the mountain heights beyond are palaces and temples lifting their heads against the sky. All his—he has but to stretch forth his hand. He feels that the season of bloom will last forever, that his little life time will stretch to the length of eternity—but an eternity which changes with kaleidoscopic colors. Many days, yet not a single one alike, except in happiness and great deeds; and then, at length, not the numb insensibility of old age, not the cold forgetfulness of the grave, but some sudden, flaming extinction like that which befell those heroes not doomed to share the common death of mortals. Seeing his radiant hopefulness, and the joyous confidence with which he meets fate halfway, almost we are persuaded to share his own belief in the immortality of his joy and to say to him:

"Fair youth, beneath the trees thou canst not leave
Thy song, nor ever can those trees be bare.
* * * * *
Forever shalt thou love and she be fair."

How the transformation from youth to middle age is wrought he could not say, or specify its various stages. Like all effectual changes, it is slow and gradual, and ever painless; for it is only violent revolutions, tearing up convictions by the roots, and scattering predictions broadcast, that leave wounds which never heal. At first, he ceases to feel so eager for the fray, as of old, when the trumpet sounded. He begins to understand a saying once heard by him with contemptuous incredulity—that it is best to lead an uneventful life, for then it seems to pass less swiftly. The warm comfort of the ingle nook appeals to him; he wishes to settle down under his own roof-tree, gathering his poor little treasures around him as if he had "come to stay." Some faint survival of the "feeling of immortality in youth" tempts him to cheat himself with fancies of foundations that time cannot shake. Yet often, when the hour of sunset comes, he realizes that he is "a day's march nearer home," but it is without the appropriate thrill of pious joy—for such a sentiment is possible only where people have endured life, not enjoyed it. Then, for an instant, the irony of man's puny efforts pierces to the marrow of his being. It is as though a band of nomads should strive, each night, to make a home for themselves, where they pitch their tents and the blaze of the camp fire leaps up through the darkness. If he turns backward toward the term of his youth, he finds scant consolation there. It is a "sad, changed, fairy place" of leafless tree and ruined bower. The verdant plain he traveled so gaily once, is now a desert. The seeming

pools, shimmering as with the gleam of pure, refreshing water, are only shining sand, and the mocking mirage has feigned the castles that lure the traveler from a distance. He must return to the neutral-tinted present and make the most of it. Therefore, he too, begins to mumble proverbs, to talk of the value of caution, and of the pitfalls that lie in wait for the hasty fool. Novelty he no longer considers the prime recommendation of any movement that is set on foot; but, in his turn, betrays a bias in favor of established methods. Shaking his gray head, he says that the ancient ways have been tried and found not wanting—and who can answer for these new fine schemes? As an excuse for his altered strain, he declares that the young people of his day were gifted with wisdom beyond their years, and had none of the giddiness of modern youth. Slowly as the senses grow less acute, life loses somewhat of its savor, and is not so sweet to the palate. It is the time of decay, of the falling leaf; an icy breath steals through the sunlight. The grasp slackens even upon the most cherished objects. Desires drop away one by one; far distant prospects no longer charm the old eyes, nor can the old feet hope to wander far. Even the sirens' song cannot enchant the dull ear. This is the resignation of the body which finally brings the mind to the same state of feeling. To pass to death from the flush of youth is like plunging out of a full blaze of light into the unknown darkness—warm flesh and blood shrink from the thought as from the touch of cold steel, but with old age the imagination loses much of its fervor, and conjures up no dreadful visions of the mysteries that lie beyond. The undiscovered country seems less a place of terrors than of rest. As the shadows lengthen everything seems to merge towards that silent spot

"Where old affections are forgot or troubles not."

Where the tombstones glimmer ghostly among the tangled grass, and the bushy cedars show black against the gold of sunny skies.

Harry Keler.

THE January number of the *Locomotive Engineer*, appears in a bran new dress. The type being brevier instead of long primer is equal to an addition of four pages to the publication, which grows in value with each issue. We congratulate the editor and repeat for his delectation, that "nothing succeeds like success."

AN American syndicate has been formed for building a railroad in Siberia. It requires very cold weather to dissuade a full-blooded Yankee to decline a race for the almighty dollar in any land.

MR. EDITOR:—The advance sheets of the January *Magazine* are at hand, but from them we can form no idea, what the complete book has in store for us; if the other departments are as well sustained as the Mechanical Department is, the *Magazine* will no doubt be an ever welcome visitor in the homes of its readers, and one whose advent is sure to bring pleasure and profit, and prompt the wish that it might come more frequently.

"E. S." opens his interesting communication with a discussion on Mr. Lockwood's latest proposition, "not twice nothing but four times something," and I think conclusively proves that Mr. Lockwood "has got himself tangled up in an inextricable mud-dle of figures" which like that bow-line becomes tighter the more it is pulled at, but as "E. S." is able to hold up his end of the argument, I shall not enter into this contest, knowing that it will be a running fight, "around a circle, and over the same lines" which after awhile becomes monotonous.

"E. S." seems to concur with nearly all the correspondents who have expressed their views on the economy of using the highest possible steam pressure in doing a given quantity of work in a given time, reasons out the saving effected very clearly and conclusively. I cannot understand how "W. A. G." got me mixed up in the statement about brick arches and will have to follow "E. S." and give it up till we hear from "W. A. G." again.

Personal acquaintance with Mr. E. J. Rauch assures me, that he is not the one to withhold his pardon, for an offense so frankly admitted and apologized for, but in all mathematics and geometry there is no rule by which 5×13 and 8×8 can ever be equal, nor cutting or placing of pieces, will be able to demonstrate it, for it is an impossibility.

"E. S." then points out a mistake I made in calculating the horse-power, which he will find I have acknowledged on page 20 of January *Magazine*, in answer to "Otto Hallbeck," who first drew my attention to it. I am very much pleased to find, that our friends will take the trouble to go over an array of figures, which would frighten many men, to verify or disprove statements made, and as "E. S." says "everybody is liable to make a mistake," this revision of figures by a number of others will be sure to lead to good results, for it will make the writers more cautious (as I certainly mean to be) to avoid errors, and if made they will be discovered and corrected.

I am sorry to learn that "E. S." has forsaken me in the argument on the lever in the wheel, but as he says he "was convinced" it ought to prove him open to reason, and I would ask "E. S." to carefully examine into the merits of the subject,

as stated by me on page 20 of the January *Magazine*. "E. S." will find, that in the locomotive with a two-foot wheel and a two-foot stroke, the fulcrum (as located by Mr. Lockwood and "A. D.") and the power, occupy the same place at the same time, during parts of each revolution. This would leave no leverage at all at that time, and all the work would have to be done on the upper half of the revolution. But the most careless observer would be convinced that such a locomotive was able to pull a heavy train, and that she would do it even if her pins were down, where our friends of the opposition located the fulcrum. I do not see how a locomotive like the one described, could be started, much less do any work, if the fulcrum was at the rail, and therefore I must still adhere to my previous method of locating the fulcrums at the center of axle, the resistance being on the circumference of the axle in the boxes, and the power at the pin.

Having had no experience at all with extension fronts, I must leave "E. S.'s" questions unanswered, but hope some one will give "E. S." satisfaction, and earn the everlasting thanks he offers.

"An Emporia Cripple" gives us a good idea of the "single eccentric reverse gear," also attests his faith in the economy of high pressure steam, and instances a saving of half the fuel by changing engines and using higher pressure in a steamship.

Friend "Tucker" also reasons out the advantage of using high pressure steam, and comes to the conclusion, in regard to "W. A. G.'s" query about smoke being drawn into the chest and cylinders, that no smoke can be drawn in, when the locomotive is running down grades, while in gear in the direction in which she is running.

In closing Bro. Tucker asks, "What is momentum, and what form of mechanical force does it represent? What is momentum, may be more easily answered than the latter part of the question, as Bro. Tucker will see when we consider what momentum itself is. Momentum is defined in a few words as *the force of a moving body*, but there are bodies in motion by various means, and only under certain conditions may they be said to be under momentum in mechanics. A ball or stone dropped from a height has movement, but it is caused to fall by the action of the law of gravity, which continues to act even after it strikes the ground, and causes the ball or stone to adhere to the ground. A ball or stone thrown from the hand at any object in a horizontal plane possesses momentum, because the power that was applied to it to produce motion has ceased to act, and the stone or ball moves on simply by the impulse it received from the hand. A clock pendulum has a motion by gravity and momentum, for when it has reached its highest point, it swings back to

its lowest point by the action of gravity, but having obtained this motion it is carried past its lowest point by what is called momentum, and contrary to the law of gravity it swings up on the other side. A train of cars put in motion by its locomotive, and pushing said locomotive into a preceding train, in spite of the will of the engineer, as expressed by the reverse lever, is an instance of momentum, with which some of us have become more or less familiar.

Momentum accurately defined, is the force in a moving body, after the power which produced the motion has ceased to act, and any body moving by momentum only, will therefore move with ever decreasing velocity, until eventually it comes to a state of rest.

As Bro. "Tucker" will now perceive, momentum may be produced by various means, such as the action of the hand in throwing a ball, a stone, a spear or any other article; the action of powder in a gun to shoot a ball; the action of steam to produce motion in a train or in a ship; or in a hundred other ways, and the momentum produced by these various ways, would represent force acquired by the means used to produce motion, and would therefore vary very much

"V. F." in explaining the draft of chimneys says, it is owing to "the difference of pressure at the base of the chimney," caused by the difference between the heated air inside and the outside air. We all know that when heat is introduced into air it becomes lighter, and ascends and that its place is filled by colder air, which is warmed in its turn and so on, thus producing the motion of the air we call draft, but it is stated as a fact that in tall monuments, such as Bunker Hill at Boston, there is a constant rush of air up the shaft, whenever the door at the bottom is open, and that this is going on without the aid of heat needs further explanation or contradiction, neither of which I am in position to give.

The noise of the exhaust report, is caused by the unused expansion of the steam in its passage to the open air. If it were possible to use up all the expansion of the steam in the cylinders, there would be no noise at its liberation, but as it still retains much of its energy, it makes its exit from the machine with a snort of satisfaction, at having at last been permitted to gain its liberty. If the dampers of the fire-box are of the same size, front and back, the front one would certainly admit more air when running ahead, on account of the well known principle of the air—resistance, which would force the air into the fire-box from the front.

"Engineer" takes "Side Rod" to task for having quoted "Sinclair," but I think it is more than many others could do, and proves that "Side Rod" is willing to obtain information in every available manner, and hav-

ing obtained it is also willing to share it with others, and is therefore of greater value to his fellow man, than the man who simply makes his appearance to sneer, ridicule and expose such actions.

We are glad to find that Bro. Hill, of the *Locomotive Engineer*, has not lost his first love for our Order, and that he expects to find the solution of many complex questions from this Order, because of our studies on mechanics. Bro. Hill admits that he did not attach as much importance to the subject of study as it deserves, but he certainly would not be where he now is, if he had not given some of his time to investigation and study. It is certainly those who qualify themselves for positions, who shall be able to fill them, with satisfaction to themselves and their employers.

"47" asks what steam is before it reaches the air, but in reality we never see steam in the air, because when we see what is mis-called steam it has ceased to be steam and has become condensed. Steam is an invisible vapor or gas possessing heat, moisture and expansive properties.

"A. D." thanks "O. H." for demolishing "the horse-power rule." (I have thanked "O. H." for correcting it,) but I fail to see where it was damaged. I do not remember that I failed to answer "A. D.'s" question, but if he will restate it, and answer the problem of the two-foot drivers two-foot stroke locomotive, on page 20 of the January *Magazine*, I will if possible answer his question.

Vulcan.

MR. EDITOR:—"Vulcan," in answering my question, says: "It is a well-known fact that a smaller wheel will pull a larger load than a large wheel, and at the same expense of steam a large wheel will pull a smaller load over a proportionately greater distance." In that he is correct, but that does not answer my question. If he was lifting a weight by means of a lever, and the weight was all that he could lift with such a lever, it would be impossible for him to lift a heavier weight without changing the points of his lever, so as to take a greater advantage of the weight; yet he maintains that the fulcrum is at the centre of the axle and the resistance at the circumference. According to that theory, increasing or diminishing the size of the drivers would not affect the leverage, or have anything to do with the amount of weight that an engine could pull. It looks very much as if his two statements contradict each other.

I have never maintained that an engine could pull more when the pin was on the top quarter than on the bottom, but think that it is as powerful when on one quarter as the other.

The rule for determining the power of a lever is this: As power is to weight, so is

weight's distance from fulcrum to power's distance. Example—What amount of weight can be raised with a power of ten pounds, a lever six feet long, the fulcrum two feet from weight and four feet from power.

p. w. wd. pd.
10 : X : : 2 : 4

4

$40 \div 2 = 20$.

Now, let us take an engine with 4 foot drivers and 2 foot stroke; place the pin on the top quarter and admit enough steam into the cylinder to move a weight of 1,000 pounds. It will bear against the piston and back cylinder-head alike, but the pin receiving its power from the piston, has the advantage of the driving box, which is resisted by the back pressure against the back head of the cylinder in the proportion of $1\frac{1}{2}$ to 1, on account of their distances from the fulcrum (rail), and has a surplus of power left that will pull 500 pounds. Now, while the wheel revolves half way, or the pin moves from back to forward center, we have 500 pounds moved 6 feet, omitting the fractions; $500 \text{ lbs.} \times 6 \text{ ft.} = 3,000 \text{ foot pounds}$; the pin, where the power is applied, has moved in a rotary motion 3 feet; $1,000 \times 3 \text{ ft.} = 3,000 \text{ foot pounds}$.

Now let us place the pin on the bottom quarter and see what we can make of it. The steam presses equally against front cylinder-head and piston; the pressure against the cylinder-head being conveyed through the frame to the driving-box, and the pressure against the piston through the main rod to the pin, which is now offered as a resistance; but as the pin is midway between the driving-box and the rail, one-half the back pressure is against each one, which would leave a power at the driving-box of 500 pounds. Now, while the engine is making its backward stroke the driving-box has advanced six feet, moving 500 pounds six feet, which again would equal 3,000 foot pounds. I may not have made this plain enough, but I have done my best.

"Eccentric Strap," in reference to my statement that the bottom of the wheel is stationary for a moment, says: "Now all this is dead wrong; in fact, the veriest folly to make such a statement." He then uses a cut to prove that the two motions—one of rotation the other of translation—are in opposite directions, and counteract each other; proving that the bottom of the wheel does stand still. It is a hard matter for one to tell which side of the fence he is on.

I have a question to ask. If the joints and seams of a boiler, together with the throttle, whistle and all-cocks and valves were air tight, what would be in the boiler above the water, after the steam had gone down? My engineer says a vacuum, but all works that I have seen on philosophy say there is no such thing as a perfect vacuum.

Ash Hoe.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during January. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

These devices may be appropriated by anyone, and are therefore of interest both to the public and manufacturers, and copies of the patents will be mailed at 15 cents each by Mr. Brock. Repetitious labor may often also be saved inventors by an examination of this record:

Railway frog, W. Morris.
Car brake, A. A. Weidemeyer.
Car coupling, G. Worden.
Car wheel, F. W. Townrow.
Car axle lubricator, J. S. Sanson.
Throttle valve, E. Nicholson.
Switch, Masterman & Jackson.
Track lifter, J. Morton.
Car brake, F. A. Caulfield.
Car coupling, C. Eastin.
Compartment car, W. D. Mann.
Railroad car, S. Greason.
Car wheel, Rupp & Ott.
Casting car wheels, J. K. Sax.
Dummy engine, T. C. Robinson.
Lubricating axle, J. Schimmeler.
Elevated railway, J. E. Lerrell.
Spark arrester, W. F. Grassler.
Car brake, J. McCabe.
Car brake, W. Ebbitt.
Steam and air brake, J. W. Gardner.
Grain car, H. Stalneckner.
Locomotive furnace, J. Wood, jr.
Roll for splitting rails, A. Howells.
Railway signal, D. F. Sweet.
Car ventilator, A. B. Sweetland.
Car coupling, W. Williams.
Operating switches, Hickman & Stauffer.
Signal, S. Jackson.
Deflector for cars, J. A. Rockwood.

CHICAGO, ILL., December 14, 1888.

MR. EDITOR:—Herewith please find correct solution of the question proposed by Bro. Otto Hallbeck in the December number. I simply give principles and the results in the statement; let our brother work it out for himself:

Principle: Pressure of steam per square inch by area of boiler in square inch, equals aggregate pressure of strain.

Area of each end of boiler: 1963.5 square inches.

Formula: $R^2 \times 3.1416$ [Pie.], equals area of circle. Area of body of boiler 37699.2 square inch.

Formula: $C [= 3.1416 \text{ [Pie.]} \times 50] \times L$ equals area of cylinder.

Area of ends plus area of body = area of entire boiler. [41626.2 square inch].

Area of boiler in square inch by pressure on each square inch = aggregate pressure, [5,005,144 lbs]

Very respectfully submitted,
Lewis H. Evans.

Mr. EDITOR:—In the December number of the *Magazine*, pages 893 and 896, I endeavored to lay down certain mechanical principles which ought to govern in railway locomotion. Having been asked to illustrate and explain certain differences in action, I shall try to do so in this article.

Fig. 9.

In the article above referred to I now re-introduce Fig. 9, which by its lines, shows an attempt to balance rotating and reciprocating parts in combination, crank-pin, connecting and parallel rods, &c., &c., with rotating or rolling weight alone, the counter-balance, with constantly increasing and decreasing speeds, with reversing motions. These reversing motions occur at the end

causes this "wear and tear." This is the primary cause, and the throw of working parts as here described is secondary.

In the July *Magazine* of 1887, page 394, I introduced some cuts to show the wear of the pulling-bar and coupling-pin. Nos 3, 4 and 5 are again introduced to show in comparison with a remedy with which I am familiar.

No. 3.

No. 3 is the rear coupling-pin, coupling-tender to locomotive.

No. 5.—Showing comparative thickness of pulling bar. Service, express passenger. Mileage in two months, 5,440 miles; wear of pin $\frac{1}{4}$ of an inch, with corresponding wear and elongation of pulling-bar as shown at the upper end of Fig. 4.

No. 4.

No. 5.

and beginning of each stroke, and say in a twenty four inch cylinder every twenty-four inches. To this I added the centrifugal throw of the counterbalance, the crank-pin, &c., &c., in degree, as either is at its minimum or maximum elevation, with the speed of rotation and translation in combination added. It is the reversing motion which

Fig. 10, in December *Magazine*, page 896, is again re-introduced to show a correct mechanical principle, L. E., the corresponding lines of a steam counter-balance locomotive, each exact duplicate rotating and reciprocating part in combination, moving by the expansion and elasticity of steam in opposite directions to each other, equi-distant from a common centre, to one duplex acting regulating steam-valve, the lines and arrows in Fig. 10, moving alternately in opposite directions clearly coupled with this description, indicate how this is done by the use of two cylinders on each side of the locomotive.

Fig. 10.

Fig. 11.

Fig. 12.

Fig. 13.

Fig. 11.—Shows a pulley-bar, without elongation of the holes. Fig. 12 the comparative thickness, and Fig. 13 the coupling-pin. These were in use on the locomotive Henry J. Shaw, used largely in very high speed passenger service of over 21,000 miles; wear $\frac{1}{4}$ of an inch at one point on the pin, as shown on the cut and on the pin.

These views are taken from photographs of pins and bars now in my possession, and can be seen by calling at my office in Philadelphia.

This is such a self evident proposition, that to men as intelligent and observant as locomotive firemen and engineers, seeing ought to be believing. With the compliments of the season to these mutual "crusaders" of the rail, believe me yours and theirs.

Very truly,

William E. Lockwood.

LOCH AERIE, January, 1889.

Switch Lights.

As switches are a necessity on all roads, and are liable to be left in wrong position for following or returning trains, a ready method of detecting a misplaced switch, becomes an important factor of safety in the handling of trains. On nearly all roads the position, shape, or the color of a target connected with the switch, serve as indicators of the position of the switch in the day time but at night lights have to be used, which shall indicate the position of the switch by their color. On most roads this is done by the use of green and red glasses, in a guard light, so connected with the switch as to show a green light when the switch is right for the main track, and a red light when the switch is turned. Of late, however, an innovation has been introduced on some roads, which is fraught with danger, and against which every engineman should raise his voice in protest, and this is the displacement

of the green and red plain lights, to make room for a white and red bulls-eye light. These bulls-eyes have concentric circles in the glasses, and are liable to be trimmed so variably, as in some cases to be as brilliant as a headlight, and from that ranging down to an ordinary lantern. A runner approaching one of these lights from a distance, is therefore left in doubt, whether it is a switch-light in its place with an extra trim, or a headlight of an approaching train. With a poorer trim on the light, it may be taken for a track-walker making his rounds, or a careless flagman with his white light obscuring his red light. On approaching the light the doubts in regard to its identity may be removed, and it proves to be one of these new bulls-eyes, but in passing it, it casts such a glare of light as to dazzle the eyes, and for a few moments render them unfitted to perceive danger, which may be lurking close by. There are lots of dangers now in the railway service, without having them increased by the introduction of these lights, which as has been shown may lead to mistakes, and cause loss of life and property; whereas the old style of green lights can never be mistaken for a head light, a track-walker, or a flagman, while the red side can be seen to a greater distance, and much clearer with a green, than when associated with a white light.

Work has been commenced on a railway from San Diego, Cal., east, and it is hoped to extend it some 20 miles into the iron mountain and that ere long rolling mills will be established at San Diego to use the iron thus obtained. The great difficulty in the way of iron manufacture in California, however, is the entire absence of good coal in that State. Although there is plenty of iron ore in California no pig iron whatever is made there.

THE New York & New England Railroad has entered into a traffic arrangement with the Hudson Suspension Bridge Company. The Railroad Company is to build a connection, and the receipts are to be divided.

MR. EDITOR:—Soon after the Mechanical Department of the *Magazine* was started a running discussion was begun touching the questions, "What is a locomotive?" "Does the cross-head stand still during half a revolution of the driver?" "Where is the fulcrum?" all of which are more or less closely related. And though much has been written on all sides, there seems to be very little change of opinion among the writers. There are many of us who, after reading all that has been written, may feel like inquiring whether we could make a mile a second quicker, or pull a pound more if these points were definitely settled. But if we were to refuse on the same grounds to consider every question that is presented, we should advance in knowledge very slowly. First, in discussing these propositions, we must agree on what is a locomotive. Is a locomotive a locomotive when she is standing still? Is she a locomotive when she slips? To me the most rational reply to these questions is that under these changes of condition the locomotive does not lose its identity. A railroad company may own any number of locomotives and not one of them be turning a wheel. A builder may sell locomotives without the necessity of firing them up and putting them in motion. An engineer may oil a locomotive though she be a standing quietly at a water tank. This being the case, the principles involved in the construction and operation of the locomotive do not change with a simple change of conditions. If the cross-head moves through the guides when the locomotive slips, it performs exactly the same movement when she moves forward on the rail. If the fulcrum is at the center of the axle when she slips, adhering to the rail does not change it. Suppose two locomotives of exactly the same dimensions, one of which is mounted on rollers on a flat car, and the other stands on the rail, coupled to the car, and both headed the same way. Both are given steam at the same time and make one revolution of the wheel. Will anyone claim that the guides of the locomotive on the car passed over the cross-head while the crank-pin was moving from forward to back center? I think not. Yet the motion of the relative parts of both locomotives and the motion of both locomotives relative to the ground was the same. But you say the locomotive on the car did not move herself, that is, relative to the ground. True, but she is a locomotive "for a' that," and her movement was identical with the one that did. Again: An engine making twenty-five miles an hour is shut off but is still carried forward by her own momentum. Will anyone claim that the cross head stands still and the guides are forced forward over it during what is commonly called the back stroke? If the guides move forward and

the cross-head stands still, why do we call it the back stroke? Put the cylinder above the driver in a vertical position, and "how are you fixed?" Do the guides in that case move over the cross-head during one-half of each revolution? I guess not. Yet the mechanical principles involved are the same in both cases.

If space permits I will at some future time attempt to show that Mr. Lockwood is not a crank, which he certainly is if he can maintain his present position. Mind, I do not use the word *crank* in a deprecating sense, but the reverse.

A. H. Tucker.

MONTREAL, CAN., December 7, 1888.

MR. EDITOR:—In the December number of the *Magazine*, page 899, "Vulcan" says he cannot see how smoke and dirt can be drawn into a cylinder when an engine is running and shut off. The piston causes a vacuum through the steam chest, dry-pipe and of course the cylinder. Yet you do not see that the same exhaust-port which opened to allow the steam to escape, also opens to allow the atmosphere to enter and fill the cylinder and carry with its smoke and dirt, yet, nevertheless, it is a fact, and if you are accustomed to throw in coal at such a time and your steam-chests carry no air-valves (relief valves), the first time your engine has the pistons out, take a look at your rings or any part of the cylinder where there is no friction and you will see a black coating of smoke and tallow. I have known of many a piston blowing from a bad fireman, as rings would become stuck and remain flush with the piston and have to be taken out and cleaned. I am sure you cannot but see that you are in error.

Canada.

ORTONVILLE, December 10, 1888.

MR. EDITOR:—If an engine whose boiler carries 130 lbs. of steam, be placed so that her steam-port be wide open to the forward end of the cylinder, her wheels locked so as to be immovable, all points about her steam-pipes, cylinder and steam chest be tight, her cylinder packing and valve-seat in good condition, i. e. so steam will not blow through, and the throttle open to that extent, that if left free, the engine would just move herself, and be left in that condition for an indefinite period, will a pressure in time be shown on a steam-gauge connected to the forward end of the cylinder equal to that within the boiler? If so, why so? If not, why not?

With a given pressure entering alternately at each end of a cylinder, will the work done on both sides of the piston be equal?

Let me down easy with these questions, "Vulcan," there are no "problems in algebra" about them.

Yours truly,

M. St. Peter.

A New "Strong" Locomotive.

A recent number of the *Providence Journal* describes as follows the new monster locomotive built by the Hinkley Locomotive Company, Boston. She is designed and constructed for the Strong Locomotive Company, New York, for the Atchafalaya, Topeka & Santa Fé railroad. It is the latest built of the "Strong" locomotives. The improvements are the invention of Mr. George S. Strong, at one time Mechanical Superintendent of the Lehigh Valley road.

The peculiarity in the construction of the Strong locomotive is in her furnaces and combustion chamber, her cylinder valves and valve gears, and in the arrangement of her wheels and running gear. The boiler has two furnaces, each one being a welded and corrugated steel cylinder 42 inches in diameter and 7 feet long. These two furnaces are joined by a flanged and corrugated junction piece, a corrugated cylindrical combustion chamber, making the grate area of 50 square feet, with a combustion chamber 9 feet from the face of the bridge wall to the tube sheet, and 16 feet from the fire door to the tube sheet. The total heating surface is 1,650 feet. By his construction all braces and stay bolts and crown bars are done away with, the gases being all consumed and all the smoke prevented. The sparks are not drawn from the fire-box, and no spark arrester is required, the engine running without smoke or sparks. The original Strong engine would even burn culm, the refuse of the pit mouth, and this engine will use anthracite or bituminous coal with good results.

The other radical departures in the build of this locomotive are in the cylinders, valves, and valve gear, there being no steam chests on top of the cylinders, as in ordinary engines. There are four valves interposed in the passages back of the cylinders—one for steam and one for exhaust at each end, every valve being a gridiron plain slide. There are nine ports $4\frac{1}{2}$ inches long on each valve, making $38\frac{1}{2}$ inches the length of port on each valve. This large valve area admits the steam at very nearly boiler pressure on the piston, and the steam valve cuts it off at the will of the engineer at any place from 4 to 22 inches, the exhaust valve holding on to the steam until the last inch of the piston travels, when it opens wide, letting the steam go freely with very little back pressure. This peculiarity enables the engine, at high speed, to develop about double the horse power that an ordinary locomotive, with equal sized cylinders, 18x24 inches, at an equal cut off, would be able to do, an engine similar to this one having shown the enormous strength of 1,810 horse power while pulling a train of twelve Pullman coaches on the Northern Pacific road at a speed exceeding sixty miles an hour. The same engine has pulled a train of ten cars 148 miles in 148 minutes running time. This was done on a five-foot wheel-six-coupled engine.

Returning to a description of the valve gear, the valves are operated by a single eccentric for each cylinder, the eccentric being keyed fast to the shaft or axle.

This eccentric runs the engine both ways, and imparts an independent motion to the steam and exhaust valves, so that the engineer has perfect control over the point of cut-off without altering the travel of the exhaust, and can alter the compression without changing the travel of the steam. In this manner the engine makes the same card or gives the same distribution of steam as a nicely adjusted Corliss or Greene engine would do at a given high piston speed. This enables her to do her work with from 20 to 33 per cent. less water, and consequently less steam. Her large grate area enables her to burn her coal so as to give an evaporation from 25 to 33 per cent. higher than ordinary locomotive boilers doing the same work, so that the combined action of boiler and valve gear is to make a very economical engine, and one that is capable, it is claimed, of taking an extremely heavy train of from ten to fifteen cars and making sixty miles an hour with ease.

The locomotive has four wheels, swing truck, under her front end, like an ordinary machine. Her drivers, 68 inches in diameter, are midway between the front and rear ends of the boiler. Back of the drivers is a two-wheel pony truck, 42-inch wheel, which is equalized with the drivers, making ten wheels under the engine. The tender is carried on a four-wheel truck forward and a six-wheel truck back, making ten wheels in all under the tender. The total weight is over sixty tons. The engineer's cab is over the hind driver, forward of the double fire box. He has a very extended view of the track on both sides, and is entirely away from the dirt and dust of the tender, and his cab rides as nicely and as cleanly as a parlor car. The fireman has a cab on the back end of the fire box entirely to himself. They have communication by a passage over the top of the fire box between the two cabs, the engineer having a call bell with which to summon the stoker if he wishes to speak with him. The locomotive wheel base is 28 feet; the wheel base of engine and tender, 48 feet; total length over all, about 55 feet. The highest point of the engineer's cab is 13 feet 7 inches from the ground. Her fireman's cab, which, like the driver's, is very roomy, is built of heavy iron plate. The engine has no extended front arch or netting or device for spark arrester, as they are not required.

In the above description of the "Strong" locomotive, it seems as if the reporter was going it rather "strong" by claiming to do away with "all braces, stay bolts and crown bars" in the construction, and with "all gases and smoke" in the running of them. While railroad men are ready to welcome all inventions which would seem to be improvements on the present style of locomotive, yet they must be pardoned if they hesitate in accepting such statements as true, and await the result of a practical test of some months, or years, in actual use. Such statements as above given, of dispensing with all braces and stays, seems so radically different from all our conceptions of a high-pressure boiler, that we cannot understand how it is possible to imprison such immense forces without the usual stays, and thus we are also led to doubt the other statements of being able to consume all gases and smoke. Then again, no sparks are to be drawn from the fire box, therefore no arrester or netting is to be necessary, and dirt or culm is to be burned. As a general rule it is found that the finer the fuel the sharper the draft will have to be to draw the air through the small air passages left between the fuel, and hence, as a rule, our culm-burners throw lots of sparks.

The valve motion, as described would seem to have some good features in it, but it is certainly more complicated than the ordinary forms of slide valves, and therefore more liable to injury or wear, as there must be many more parts, the disarrangement of any one of which would affect others to a greater or less extent. If, however, the valve motion should prove a steam saver, doing the work with from 20 to 33 per cent. less steam and water, and if this should be increased 25 to 33 per cent. more by the superior combustion of the fuel, it would make it possible to do the same work with less

than one-half the fuel ordinarily used, and if this could be proven, it would be only a matter of time to find the "Strong" locomotive supplanting all others and in universal use, but there are a number of ifs in this supposition, in regard to which we shall await practical demonstration with all due patience.

Car Notes.

The New York, Lake Erie & Western is having twenty new express cars built.

The Erie Car Works, Erie, Pa., are busy on several large orders for freight cars.

Pennock Bros., of Minerva, O., are building 400 coal cars for the Cleveland & Canton.

The Marietta & North Georgia has recently let contracts for 200 standard gauge cars.

The Northern Pacific road is having twenty-one passenger cars built by the Pullman Company.

The Clayton Land Company, of Birmingham, has completed ten platform cars for the Georgia Pacific.

The Harrisburg Car Company, of Harrisburg, Pa., is building 100 tank cars for the Standard Oil Company.

The Milton Car Works, Milton, Pa., have an order for 500 box and 500 coal cars for the New Jersey Central railroad.

The car shops of McKee, Fuller & Company, Catawqua, Pa., are building 2,000 coal cars for the Lehigh Valley railroad.

The Lafayette Car Works are at work on an order for 100 refrigerator cars, which will keep them busy for some weeks.

McKee, Fuller & Co. are building an extensive erecting shop to their works at Fullerton, Pa., 182 by 50 feet in dimensions.

The Lima (Ohio) Car Works, which have been running with a half force for six months, put 250 additional men to work November 12.

The big car works at Anniston, Ala., are expected to consume 10,000 feet of lumber annually in the manufacture of 6,000 cars.

The Ohio Falls Car Works, Jeffersonville, Ind., are building a number of freight cars for the East Tennessee, Virginia & Georgia railroad.

The Treat Car Wheel Works, Hannibal, Mo., are building a branch foundry at East Chicago, which will have a capacity of 100 wheels per day.

The Barney & Smith Manufacturing Company, of Dayton, Ohio, has been awarded a contract to build 500 box cars and 500 coal cars for the Chesapeake & Ohio road.

The Elliott Car Works, of Gadsden, Ala., are building a large number of coal and flat cars for the Alabama Great Southern and New Orleans & Northeastern roads.

The shops of the United States Rolling Stock Company at Anniston, Ala., are building freight cars for the Alabama Great Southern and the Georgia Pacific roads.

The Wason Manufacturing Company, of Brightwood, Mass., has received an order from the Old Colony for twenty-five passenger cars, "to be the finest in New England."

The Boston & Maine has just let contracts for twenty passenger cars, the order being divided with the Laconia (N. H.) Car Company and Osgood, Bradley & Sons, Worcester, Mass.

Fifty ore cars were recently received by the Alabama Great Southern from the works of the United States Rolling Stock Company in Anniston. The road has already received several hundred of these cars.

"The Richmond & Danville recently placed in service four new passenger cars built by the Jackson & Sharp Company, of Wilmington, Del.

The New York Central have had built 1,550 new freight cars since the beginning of last March. They have lately ordered twenty new passenger cars from a New York contract firm.

The Ohio Falls Car Company has completed the order for the South Carolina road for six passenger coaches and 200 box cars, and is now building 100 platform cars for another Southern road.

The Laconia Car Company, Laconia, N. H., is building 20 box cars for the New York, Lake Erie & Western railroad, fitted with the Eastman car-heater. They will be used to carry fruit and similar freight.

The Erie (Pa.) Car Works, Limited, are very busy completing an order for 250 freight cars for the Allegheny & Kinzua road, now building. It is the intention of the company to commence on repair work for the Pennsylvania this winter.

A Swedish engineer, M. Lundberg, says a foreign exchange, has constructed a railway car, which in a few minutes may be adapted to five different gauges, the narrowest being 0.890m. The invention has been patented in several foreign countries.

All the new cars now running on the express trains of the New York & New England railroad are completely lined with mineral wool to deaden sound and keep out the outside temperature. Not only the floor is filled in this case, but also sides and roof.

The Michigan Car Company are, as usual, very busy. Among their recent orders are a number of coal cars for the Hocking Valley railroad and the Denver & Rio Grande railroad; also 1,000 cars for the Union Pacific, 250 of the latter being refrigerator cars.

Edward B. Wall, superintendent of motive power of the Pittsburg, Cincinnati & St. Louis and the Chicago, St. Louis & Pittsburg roads, has asked for bids on 2,000 box, 500 stock and 500 gondola cars, the box cars to be 60,000 pounds capacity and equipped with the Wagner door.

The Chicago, St. Paul, Minneapolis & Omaha road has received three new Pullman sleepers for use on the vestibule trains between St. Paul and Minneapolis and Chicago. The cars are elegantly finished and furnished and have all the latest improvements for comfort and luxury.

The Southern Iron Car Line, of Atlanta, Ga., recently placed in its service one hundred 60,000-pound box cars to run between points south, west and north. They were constructed under the patents of the Iron Car Company, of New York, with steel and iron frames, but with the ordinary box.

The Keith Manufacturing Company, of Sagamore, Mass., is building fifty box cars and repairing fifty freight cars for the Old Colony. The company is also engaged upon an order of twenty-five platform cars for the Boston & Maine of the same pattern as the lot of 200 recently delivered to this road.

The San Francisco Bulletin says: The Northwestern Equipment Company (for the Northern Pacific) has let contracts for twenty-one passenger cars to the Pullman Car Company; 400 box cars to the Barney & Smith Manufacturing Company, of Dayton, Ohio; 100 box cars and fifty furniture cars to the Lafayette Car Works, of Lafayette, Ind. The Seattle, Lake Shore & Eastern has just received from the Peninsular Car Company, of Detroit, twenty new box cars and thirty new platform cars. They are equipped with the Westinghouse air brake. The Bellingham Bay & British Columbia road has received thirty platform cars and two locomotive at Whatcom. The Cooke Locomotive Works has just sent west two locomotives for the Southern Pacific. The company is building twenty-five locomotives for this road.

Locomotive Notes.

The Charleston, Cincinnati & Chicago has just received three 40 ton locomotives for use on the Rock Hill Division.

The Manchester Locomotive Works, of Manchester, N. H., has delivered two locomotives to the New Brunswick road.

The Grant Locomotive Works, Paterson, N. J., are building fifteen locomotives for the New York, Lake Erie & Western railroad.

The Rogers Locomotive Works, Paterson, N. J., have a large order for locomotives for the Chicago, Rock Island & Pacific railroad.

Three standard 17x24 locomotives have been built at the Fort Wayne, Ind., shops of the Wabash railway by Master Mechanic Morris.

John Wiley & Sons, New York, will publish early in the coming year a new and revised edition of Sinclair's Locomotive Engine Running.

The Nashville, Chattanooga & St. Louis is having built four consolidated freight and three passenger locomotives at the Rogers Locomotive Works.

In the shops of H. K. Porter & Company, Pittsburg, two locomotives for a Japanese railroad are in progress. This firm has already sent several engines to that country.

The Central of New Jersey will shortly close a contract for the construction of thirty new consolidation locomotives, with the Wooten firebox, to burn anthracite buckwheat coal.

The Rhode Island Locomotive Works of Providence, R. I., have completed the first of three locomotives for the Western railway of Alabama. The same works are also building fifteen locomotives for the Chicago, Burlington & Quincy road.

The Chicago, Burlington & Quincy has ordered fifteen new locomotives of the Rhode Island Locomotive Works. The Cooke Locomotive Works, of Paterson, N. J., have just completed a number of mogul and passenger locomotives for this road.

Rix & Firth, San Francisco, are building two locomotives, one for the Portland & Vancouver railroad, fifteen tons, 10x14, the other for the Navarro Mill & Railroad Co., twenty-two tons, 12x18. This firm has built ten locomotives since last November.

The Duluth, South Shore & Atlantic has received nine freight locomotives from the Baldwin Works, and the remaining six to complete the order will be delivered in a few days. Fifteen passenger engines, built for this by the Baldwin Works last summer, are now in service.

The Union Pacific has let contracts for building fifty new locomotives. The order was divided between the Schenectady Locomotive Works and the Rhode Island Works, twenty-five to each. The engines will be of the Union Pacific standard eight-wheel pattern, Otto steel being used throughout.

The Chicago, St. Paul & Kansas City has recently received from the Rhode Island Locomotive Works five passenger and five mogul engines. The company has also received from the Cooke Locomotive Works, Paterson, N. J., twelve moguls and five passenger, and eight mogul locomotives are still to be constructed for the road by the latter company.

The Baltimore & Ohio Railroad Company have called for bids on electric railway equipment for handling heavy freight trains in the city of Baltimore. This is an evidence of their confidence in electric motors which is at once wholesome and progressive. The motors called for are to be as powerful as those in ordinary use as switching locomotives and are to be supplied by current from both the overhead and conduit systems.

The freight shipments have increased so largely on the Pan Handle railroad, according to a dispatch from Pittsburg, that there is not enough motive power to handle the business, and several locomotives have been borrowed from the Fort Wayne road. All of the locomotive works are so pushed with orders that at present it is almost impossible for the railroads to place new contracts. The shops at Altoona and in Allegheny are being worked to their utmost capacity turning out locomotives for the Pennsylvania system.

An exchange says: The largest passenger locomotive ever built is now under construction at the Hinkley Works, Boston, and is intended for use on the Atchafalaya road. It carries two cabs, one over the boiler for the engineer, and the other in the usual place for the fireman. The driving wheels, which are the largest ever made, are of paper, and have steel tires. Economy in fuel is accomplished by a pump which utilizes the exhaust steam to heat water, and a large combustion chamber, which burns all the gas. It is expected the engine will make eighty miles an hour with ten coaches on an ordinary road.

The Mason Machine Works inform us that they have not built any locomotives for over a year, and that owing to there being no profit in it they have abandoned the business for the present, which appears to be a very wise decision. The Grant Locomotive Works are doing very little, but the company are supposed to be looking for a location in the west. Some people say that the business of building locomotives in the east cannot now be carried on profitably, and that the march of empire of this line of industry is westward. Meanwhile the Cooke Locomotive & Machine Co. are building large and convenient new works outside of Paterson. The fact is that it depends on the men who are left in an old company whether or not the business can be carried on successfully east or west. Locomotive building was never so prosperous as it has been for the last two or three years, and there is a hopeful outlook for a good, permanent business in this line, but the methods of manufacture that were successful twenty years ago would soon bring any concern to bankruptcy at the present day. The trouble with several of the old locomotive building companies is that they have worn out of brains. Where this is the case it is the wisest course for those remaining to close up the concern. Moving west will merely bring fresh disappointments and increased losses.—[*Master Car Builder.*]

The Baldwin Locomotive Works are at work upon an order of fifty locomotives for the Northern Pacific railroad. Among these, they have recently turned out thirteen Consolidation engines, with 22x28 cylinders, weighing in working order, exclusive of tender, about 150,000 pounds each. These engines are intended for service on the mountain grades of that line. Engines of substantially the same dimensions and weight have recently been built for the Philadelphia & Reading railroad, and for the Central Railroad Company of New Jersey. The engines for the Philadelphia & Reading railroad have hauled seventy six cars, each weighing 3.2 tons, of 2,240 pounds, up a grade of 175 feet per mile, combined with curves of 450 feet radius. With the heavier freight trains which it is now found economical to handle, there seems to be every probability that similarly powerful freight locomotives will come into more general use. They are also now finishing a rack rail locomotive for a line in Brazil, intended for operating on continuous grades of 3 3/4 per cent., or 1,758 feet per mile. Among the orders now in progress are Consolidation locomotives for the Pennsylvania railroad, the Denver & Rio Grande railroad, the Chicago, Burlington & Quincy railroad and the Lehigh Valley railroad. They are building a number of heavy switchers for the New York, Lake Erie & Western railroad and the Western New York & Pennsylvania railroad.

Shop Notes.

The Eutawville Railroad Company will build a machine shop at Sumter, S. C.

The Buffalo, Rochester & Pittsburgh will build repair shops at Lincoln Park, N. Y.

The Illinois Central Railway Company will build repair shops at Durant, Miss.

The United States Rolling Stock Company will build car spring works at Anniston, Ala.

The Wagner Palace Car Company will build an addition to its works at East Buffalo.

The Haskell & Barker Car Company, Michigan City, Ind., will build a large shop 130x161 feet.

The new shops of the Canadian Pacific at Montreal when completed will give employment to a thousand hands.

The West Virginia Central & Pittsburgh Railway Company propose to build machine shops at Leadville, W. Va.

The Richmond & Alleghany Railroad Company have purchased land at Gladstone, Va., upon which to build shops.

The North Chicago Rolling Mill company is said to have secured the contract for furnishing the Union Pacific road with 17,000 tons of steel rails.

The Louisville & Nashville has resumed work on the immense shops at Decatur, Ala., suspended on account of the yellow fever, and the contract will be finished by spring.

The New York, Lake Erie & Western road will close its shops at Susquehanna Pa., which employed about 200 men, it having been decided to have the work done by outside contractors.

The Chicago & North Western bridge across the Missouri river at Sioux City, Ia., was tested and formally opened to traffic December 4. The bridge cost \$1,500,000 and has been seventeen months building.

The Canadian Pacific Railway shops at Montreal are building six rotary steam snow shovels after the Leslie patents. Several of the machines are ready for service and the whole lot will be completed in a few days.

The Minnesota Car Company, of Duluth, Minn., has been organized with a capital of \$400,000. The works, which will consist of rolling mill, machine shop, foundry and car works, will be constructed, in every respect, according to the most approved standard.

The Southern Pacific Company is building a 60x100 feet addition to its shops at Sacramento, Cal., which will be used for a brass foundry, spring shop and locomotive stack and sheet iron work departments. Other improvements are also being made which will enlarge the capacity of the works.

It is reported that the Missouri Pacific will probably erect large shops on the land owned by it in Kansas City on what is known as the split log bottom or cypress, and located on the west side of the Kaw river, between the Wyandotte bridge and the Union Pacific bridge. The shops, which have been utilized by the Missouri Pacific company, at Sedalia, belong to the Missouri, Kansas & Texas road. On November 1st these shops pass into the hands of the new receivers of the Missouri, Kansas & Texas, leaving the Missouri Pacific in bad shape. For several years these shops have been used to manufacture and repair a very large per cent. of the cars and engines now on the Missouri Pacific system and the loss will be keenly felt. It is expected that the erection of the new shops at Kansas City will take place soon.

General Manager S. H. H. Clark, of the Missouri Pacific, has entered into negotiations with the city of Atchison, Kan., for the locating of the new shops of the company at that point. The city has offered a subsidy of \$100,000 for the shops, payable in bonds when they are completed. The company now has in operation at Atchison a small plant employing 300 to 500 men when working to full capacity, but if the new shops are erected a new site, on a tract of 97 acres just west of the city, bought about three years ago for shop purposes, will be occupied.

New shops for the Cincinnati, New Orleans & Texas Pacific, at Ludlow, are nearing completion. These shops are for iron working exclusively, and are admirably planned. In one long brick building 46x100 are ranged the boiler shops 40x100; the machine shop 218x100, the blacksmith shop 118x100; the brass foundry 29x44, tin shop 29x44, engine room and boiler room. A 14x36 inch Corliss engine will supply the power. These shops will probably be lighted by electricity. Mr. Meehan, superintendent of motive power and machinery, will now soon be relieved from the severe inconvenience occasioned by the burning of his shops in November of last year.

A Birmingham, Ala., paper says: The Elyton Land Company's new car works at the intersection of Thirty-fifth street and the Belt Line crossing are in full operation. Seventy-five mechanics are employed at the new shops, and they are kept more than busy turning out the contracts now on hand. A large contract for new freight cars for the Georgia Pacific Railroad has just been completed and delivered to that company. They are substantially and handsomely built, and speak volumes for the work of the new shops. Other large contracts for cars have been received by the management from other Southern roads, and there is no doubt but that they will be patronized to the full capacity of the works.

It is stated with authority that an organization, to be known as the Union Palace Car Company, has been formed by parties holding a controlling interest in the Mann Boudoir and the Woodruff Sleeping-Car companies. A large interest in these companies had been acquired by the Jackson & Sharp Company and the Harlan & Hollingsworth Company, of Wilmington, Del., in whose workshops many of the cars for the Mann and Woodruff companies have been built and stock largely taken in payment therefor. It is stated that the new company has been organized with a capital of \$3,000,000. Contracts have been placed by the new company with the Jackson & Sharp and the Harlan & Hollingsworth companies for the building of thirty-four sleeping cars, and the Union Company has also perfected arrangements for the exclusive use of its cars upon the lines of railroad now controlled by the Richmond & West Point Terminal Company.

The works of the Minnesota Car Company, which are now being built at West Duluth, Minn., will probably be ready for operation early next spring. The company expects to begin the delivery of cars next July. Work is now in progress on the stone foundations for the brick foundry, and many of the piers for the paint and the erecting shops are in. The paint shop is 56x380 ft., and the main erecting shop will be 81x526 ft. The foundry, 60x300 ft., will be stone and brick. On its south end will be a wheel pit 50x60 ft., and on the north end the pattern room, 30x60 ft. On the west side and at the northern end will be the boiler room, 28x35 ft. The brass foundry will be 18x20 ft., and the rolling mill will be 80x161 ft. In the rear of the rolling mill, at the north, will be the forge building, 70x100 ft., and in the rear of the forge building will be the gas producers and boilers, which will occupy a building 40x100 ft. The tracks through the property connect with the St. Paul & Duluth road.

WOMAN'S DEPARTMENT

EDITED BY MRS. A. HARPER.

Address all correspondence pertaining to this department to Mrs. Ida A. Harper, Washington, D. C.

TURNING A NEW LEAF.

The editor of this department has long felt that we were not using the space allotted to us to the best advantage. The desire was very strong to write something each week that would interest our readers and perhaps be useful in some small degree. We have also wished to publish all the correspondence and have done so, with but few exceptions. This has consumed all the space that could possibly be spared and we have been far from satisfied with the Women's Department. We will try for awhile a different plan, hoping it may prove satisfactory to both readers and writers. The space heretofore occupied by the leading article will be filled with shorter comments on matters of interest to women; several new departments will be opened. Education, Temperance, Industries, Franchise, Domestic and Miscellaneous. As many items will be introduced under each head as we have room for. The letters will be published, as usual, but our correspondents must be brief and must write something of general interest. This does not mean that abstract subjects shall be discussed in a learned manner. All sorts of home topic are acceptable but we do not want to hear anything about "breaking the ice," or "the waste basket," or the "flourishing condition," of the Lodges that you do not know anything about. We heartily request our friends to send us bright, chatty letters on whatever subjects you are interested in. Bring your work and come in and have a chat with us, and after awhile, when we get into our big house, we will remember the nice times we had in the little house and you will be doubly welcome.

"CARYL" is earnestly requested to write an article for the *Magazine*, embodying the same sentiments as were expressed in a private letter to the editor. The temptation was very strong to omit a few personal references and give it to our readers. It will yet be done if permission is granted.

"A FIREMAN'S WIFE," from Tyler, Texas, writes very kindly of Sunny South Lodge, 124, expresses the highest admiration for the railroad boys, compliments the *Magazine* and wishes all its readers a happy New Year.

WE really feel quite out of the fashion when we think that our department has not yet discussed the popular subject "Is Marriage a Failure?" Most of the magazines and newspapers in this country and England have had something to say on this interesting topic and the different opinions expressed are very entertaining. Let us hear from the readers of the *Fireman's Magazine*, both men and women, "Is Marriage a Failure?"

QUINCY, ILL., December 4, 1888.

To the Editor of *Woman's Department*:

Having been an interested reader of your estimable *Magazine* for quite a while, I feel it my duty to write a few words to you in its praise. It is just splendid! I have come to look for it as much as do the boys. It seems a long time from the first of the month until the next. But "time glides swiftly by" and another of your books is at hand. The boys at this place are as firm as they were the 28th of last February. The ball given in their honor and for their benefit, October 25th was well attended, which shows in what esteem they are held. All had a delightful time. May God pour out His richest blessing upon the boys who face the winter's blast, the snow and sleet, is the earnest prayer of

A Fireman's Wife.

ARIMATHEA.

In a tomb within a garden
Was the Savior laid to rest,
Hallowed was the rock-hewn pillow
Where his thorn-pierced head was pressed

There with tears of hopeless anguish
Was He placed within the gloom,
By His sorrowing disciples;
Then they left the guarded tomb.

There the torn and bleeding body
Of their loved Messiah lay,
All their hopes were buried with Him,
Naught was left but lifeless clay.

Dreamed they not that from the portal
Of the grave of Him, their king,
He should come a stronger leader,
And eternal victories bring.

Ah! that tomb in Arimathea,
'Tis hanged from darkness into glory!
Heralds of angelic beauty
Came to tell the wondrous story.

Each bright hope, cherished and vanished,
Makes a tomb within the heart,
Where lies buried something precious,
For which bitter tears may start.

O my soul! within the shadow
Of the tomb of some lost joy,
Let me lay my wounded Savior;
May His rest my heart employ.

Let my past, with all its follies,
Its mistakes, and doubts, and fears,
Neath His blood forever buried,
Come not back through endless years.

Lord, a new, pure life within me,
Raise Thou up this very hour;
From the past a living present
Resurrect through Thine own power.

Ellen M. Stata.

A LITTLE OF EVERYTHING.

To the Editor of Woman's Department:

Pegasus, having just returned from a long journey, is weary to-day. Moreover, he threatens to go out on a strike unless he can have more rest, and as every one knows the rider of a balky steed is likely to make an undignified appearance, we will leave him in his stable and take a street ramble on foot, with Mrs. Harper's permission. In other words, talk in plain prose.

Speaking of the mythical steed of the muse reminds me of a quotation that was once thrown at me: "Pegasus no sooner feels a side-saddle on his back than he feels impelled to amble toward the nearest graveyard." To say that I felt indignant would be putting it mildly, but not being in a position to dispute it, I discreetly held my tongue. I don't remember who said it, but doubtless it was the mellifluous murmur of some "Cascade" formed by the stream of masculine complacency falling over the rocks of domestic irritation in the form of an overdone beef-steak or a missing shirt button. Wonderful, indeed, is the compass of that man's mind who can guide the "ship of state" safely through the whirlpool of political disaster and in the same hour ask his wife what she spent that tea cents for that he gave her last week. But surely "Cascade" will admit that this "narrow minded" sex has accomplished a *little* in art and literature, if perchance he has heard of Mary Anderson Patti and George Eliot. While for real, genuine poetry I would rather have one of the "grey sisters' old pen-wipers than Tennyson, crazy Browning and Joaquin Miller all bound in morocco. I don't take an active interest in politics and have no desire to vote, but I don't propose to be called narrow-minded without a *mild* protest.

But to return to the quotation. Pegasus *sometimes* brings up at a graveyard under masculine guidance. Witness "Killed at the Ford," "Break, Break, Break," "The Reaper and the Flowers," "Marguerite," and twenty others that lack of space forbids me to mention.

Here is a rule for Graham bread that is quickly made: One pint of sour milk, one-half cup of molasses, one and one-half teaspoons of soda, a little salt, and enough Graham to make it stiff. This makes one loaf.

I have just made a lambrequin for a plant shelf that is quite pretty, and didn't cost a cent. A scarf of green flannel $8\frac{1}{2}$ inches wide, made of one of my brother's old shirts, was pinked across each edge, tacked across the front of the shelf and looped in the center with a piece of scarlet ribbon. On one-half of the scarf I worked a spray of popples, scarlet and yellow, and on the other half a spray of morning glories, blue and white, with green leaves. The embroidery was done with odds and ends of worsted that every one accumulates. A straight piece of scarlet cashmere fills the space made by looping the green scarf. If not placed in a strong light the flannel cannot be distinguished from felt. Perhaps some of the sisters would like to try it, and you, my dear sir, who have a flannel shirt of a

desirable shade of green, and are loth to contribute it toward the adornment of the sitting-room, my advice to you is to *keep it on*.

And now good bye; not only for this time, but probably for all time to come. I will not consume space by a lengthy valedictory, but I must say that my relations with the *Firemen's Magazine* will always be among my pleasantest recollections, and may prosperity always attend it and all of its readers.

Very sincerely,

Alice O. Darling.

[Why farewell? Is it matrimony or motherhood or old age or death? Alice O. Darling's contributions have been among the very brightest and best that have graced our columns, and we do not wish to lose them. Please let us hear from you again and many times.—Ed.]

COLUMBUS, O., December 7, 1888.

To the Editor of Woman's Department:

I have been a constant reader of your worthy *Magazine* from infancy, and find some very interesting reading contained on the pages therein. I have long looked for something from No. 9, and I thought I would ask for an 8x10 space in your interesting columns. There is a thriving Lodge here, all good, brave and hard working boys, with brave, good hearts beneath their warm jackets. We have had sunshine and sorrow from railroads, yet I thank God we are able to say, "Thy will be done, not ours." The darkest clouds have a silver lining. This world is not all sunshine; if it should rain to-day the sun may shine to-morrow. There is a many a fond mother, wife, sister and sweetheart here who looks upon her railroad boy with pride. There is plenty of good material in No. 9.

I hope in the future there will be many interesting and encouraging words sent in for our honest boys who toil early and late for the good cause. I am an Engineer's sister.

Nell.

MILWAUKEE, WIS., Oct 15, 1888.

To the Editor of Woman's Department:

For some time I wanted to say a few words to congratulate the members of Phil. H. Sheridan Lodge No. 388 for their success as true followers of him whom they hold as an example for bravery and loyalty to his country. May they all prove as true to the Brotherhood as the wish of a fireman's wife.

Enclosed is a recipe for pudding, which I hope will be served at their annual ball:

Railroad Pudding.—Take two brakemen, mash them up fine, add one conductor, mix well together, beat three firemen and one engineer, stir well together, flavor with benzine; steam three hours. Make sauce of newboys and candy butchers.

Yours truly,

H. E.

REV. SARAH E. G. SHAW is pastor of the Christian Church in Robinson, Ill., and Mrs. Judith Fulton Ferguson is a deacon in the same.

For Woman's Department:

I've ben a readin' fur sometime
 The *Firemen's Magazine*,
 An' I think its 'bout as nice a book
 'Ez I 'ave ever seen;
 An' I've been thinkin' quite a spell
 I'd take my pen some day,
 An' rite a poem and send it to,
 But I never 'new what to say,

I don't want'er sp'ak about the men
 That h'longs tew the Brotherhood,
 I'd har'ter praise 'em ef I did,
 An' I wouldn't ef I could;
 I no they air a jolly lot,
 An' mostly brave an' true,
 But you jes' try ter find the man
 That doesn't no it tew.

'Twould be no use to 'rite recespes
 For puddin's cakes or pie,
 My ways are so old-fashioned
 That ye wouldn't want'er try.
 So m-bby thet I'd better not
 Hew anythin' tew say,
 Fur I might think o' somethin' smart
 Thet I could 'rite some day.

So ef ye think its wuth ver while
 Tew print thi in yer book,
 'Twill be a favor, fur I want
 Ter see i our 'till look;
 An' ef you'd like ter hev me 'rite
 Another verse some day,
 I'd be much pleased ter, ef I could
 Jes' think o' what ter say.

Prue.

MISCELLANEOUS.

Ragged Social Philosopher (laying a dime on the bar)—The rich are getting richer and the poor poorer. Wealthy Saloon Keeper (dropping the dime in the drawer)—Yes, that's so.—*Omaha World.*

Indulgent Papa—Why my dear, you had a party last month. How often do you wish to entertain your friends.

She—This is one not to entertain my friends, papa, but to snub my enemies.

"Seems to me you are always wanting money, Mary Jane. I gave you seventy-five cents yesterday. Do you think I am a gold mine? Here's a quarter." (Up town an hour later) "What's that? Carry this state by 15,000? I've got \$50 that says he won't. Put up, gentlemen, or shut up. Money talks!"—*Chicago Tribune.*

"You and Herbert are to be married?" said one young woman to another.

"Yes, during the holidays."

You didn't threaten him with a breach-of-promise suit, did you?"

No. I merely showed him the phonograph that I always keep concealed under the sofa."

A writer in the *Boston Medical and Surgical Journal* inveighs against the bustle, which in his opinion, has really deleterious effects upon the wearer. The woman with a bustle, he says, can never sit down in a natural position. It is absolutely impossible for her to rest her back against the back of any seat of ordinary construction. He has no doubt that some of the severe back-aches in women whose duties keep them seated all day are due to, or at least are aggravated by, this disability.

Alton Telegraph: Little Stuart had spent his first day at school. "What did you learn?" was his auntie's question. "Didn't do anything. There was a women wanting to know how to spell 'cat' and I told her.

Geese hisses, but ducks quack, and when Franky, that's the baby, is painful in his lap he hollers, but the lion roars like distant thunder and makes the welken wring! Uncle Ned, which has been in July, and evry were, he says one nite a lion come out of the woods and went to his corral for to eat his catle. Uncle Ned he got up and looked in the corral thru a crack the lion rhode his teeth, and Uncle Ned sed, "The idiot thinks I am a dentist, but I haven't no time for to tend to him. He send for the lion tamer for to quell him with his I." Johnny's Composition in San Francisco *Examiner.*

JOSIAH ALLEN's children have been brought up to think that sin is jest as bad in a man as it is in a woman; and any place of amusement that was bad for a woman to go to, was bad for a man.

Now when Thomas Jefferson was a little feller, he was bewitched to go to circuses, and Josiah said, "Better let him go, Samantha, it haint no place for women or girls to go, but it won't hurt a boy." Says I, Josiah Allen the Lord made Thomas Jefferson with just as pure a heart as Tirzah Ann, and no bigger eyes or ears; and if Thomas J., goes to the circus, Tirzah Ann goes, too."

That stopped that. And then he was bewitched to get with other boys that smoked and chewed tobacco, and Josiah was jest that easy turn that he would have let him go with 'em. But says I,

"Josiah Allen, if Thomas Jefferson goes wi those boys, and gets to chewin' and smokin' to-bacco, I shall buy Tirzah Ann a pipe."

Josiah argued with me; says he, "It don't look so bad for a boy as it does for a girl."

Says I, "Custom makes the difference; we are more used to seein' men. But," says I, "when liquor goes to make a fool and a brute of anybody, it don't stop to ask about sex; it makes a wild beast and idiot of a man or woman; and to look down from heaven, I guess a man looks as bad layin' dead drunk in the gutter as a woman does. Things look differently up there than what they do to us. It is a more sightly place. And talk about looks, Josiah Allen. I don't go on clear looks. I go on principle. Will the Lord say to me in the last day, 'Josiah Allen's wife, how is it with the sole of Tirzah Ann—a' for Thomas Jefferson's soul, he bein' a boy it haint of no account?' No, I shall have to give an account to Him for my dealings with both of these souls, male and female. And I should feel guilty if I brought him up to think that what was impure for a woman was pure for a man. If a man has a greater desire to do wrong—which I won't dispute," says I, lookin' keenly on to Josiah,—"he haf a greater strength to resist temptation. And so," says I, in mild accents, but as a firm as old Plymouth Rock, "if Thomas Jefferson hangs, Tirzah Ann shall hang, too."

DOMESTIC.

THE TIRED WIFE.

All day the wife had been toiling,
From an early hour in the morn,
And her hands and feet were weary
With the burdens that she had borne;
But she said to herself: "The trouble
That weighs upon my mind is this—
That Tom never thinks to give me
A comforting hug or a kiss.

'I'm willing to do my duty,
To use all my strength and skill
In making the home attractive,
In striving my place to fill;
But though the approval of conscience
Is sweet, I am free to say,
That if Tom would give me a hug and a kiss,
"I would take all the tired away."

Then she counted over and over
The years she had been Tom's wife,
And thought of the joys and sorrows
She had known in her married life;
To be sure, there was money plenty,
And never a lack of food,
But a kiss now and then and a word of praise
Would have done her a world of good.

Ah, many a one is longing
For words that are never said;
And many a heart goes hungry
For something better than bread;
But Tom had an inspiration,
And when he went home that day
He petted his wife and kissed her
In the old time lover-like way.

And she—such enigmas are women!
Who had held herself up with pride,
At her husband's display of fondness,
Just hung on his neck and cried.
And he, by her grief reminded
Of troubles he might have shared,
Said: "Bless my heart! What a fool I've been!
And I didn't suppose you cared!"

—Josephine Pollard.

Miss Bettie H. Bicknell, of London, Tenn., has invented a baking pan which is designed to obviate the necessity of boiling meats or fowls before baking them, thus fully retaining the juices of the articles cooked.

There should be an intelligent plan agreed upon between husband and wife relative to the administration of the finances necessary to sustain a home, and the man should consider that the marriage contract also includes a financial phase which should hold that the woman who gives her talent, time and energy in caring for the home does no less than he who earns and brings in the money to meet its wants, and that it implies an equal financial value.

It is a foolish habit some anxious parents have of discussing the health of delicate children in the children's presence. The *Christian Union* says: "A physician, speaking out of a deep and practical mind, said: 'If you hear a mother refer to her daughter as nervous in the daughter's presence, if you cannot speak, glare at her, but if you can speak, say, 'Madam, your conversation would make a wooden girl nervous, to say nothing of a flesh-and-blood young person like your daughter.''"

"Marriage is not an episode in man's life and an event in woman's, it is the sum of weal or woe to both. There are in this modern land and age as many noble men unmarried, because they had to be, as there are women. Because of a memory cherished, a dream unfulfilled, an ideal unrealized, a duty bravely met, many of the noblest men living go their way alone. Sometimes I think that of the two it is the man who loves home best, for while woman is hedged into it by a thousand considerations of expediency and prejudice, he chooses it freely and royally for her sake who is to him the world's supreme attraction.—From Frances Willard's address at Nashville, Tenn

"Love will die if it is not fed,
And the true heart cries for its daily bread."

With men a word of endearment, a smile or a caress are all pleasant enough now and then; yet these little weaknesses are not necessary to a man's comfort or happiness. But a woman can dispense with food and rest, and think it no hardship, if by so doing for a time—forgetting her own bodily needs—she secures the time to cater for the taste, or minister to the comforts of those she loves. But gentle words and attentions, especially from the one loved par excellence, she cannot dispense with without suffering and loss. They are her life. With them her nature expands, broadens, grows richer and nobler; without them she withers and becomes impoverished.
—Mrs. Henry Ward Beecher in *Sunday Sentinel*.

Why is it that the boys are allowed to sit in the house doing nothing, while their overworked mother is struggling against nature and fate to do about half the work waiting for her hands? Only the other day we saw three large able-bodied boys lounging about the house, not knowing what to do with themselves, while their mother alone, tired and pale, was trying to do the work of a large family and company. Not a boy's work to help about the house? Why not? Is there anything about washing dishes that will injure him, or that he cannot learn to do well? or about making beds, or sweeping, or setting the table or washing, or ironing, or cooking a plain meal of victuals? On the contrary, there is much to benefit him in such work, the most important of which is to gain the idea that it is not manly to let the "weaker vessel" carry all the burdens, when it is possible for strong young hands to help. Most boys would gladly help in the house if they were asked to do so, and were taught how to do the work properly. Many a smart boy wants to help his tired mother, but doesn't know how beyond bringing in the wood and water. That done, she tells him to go and play, while she plods wearily on. Not a boy's work? For shame! It is a positive harm to a boy's moral character to allow him to think it right to be idle while his mother is staggering under her burdens. Let the boys help, and those who can't get help "for love or money," will see their troubles disappear.—*The Household*.

FRANCHISE.

I have never heard an argument against woman suffrage that was not flimsy.—*Geo. W. Cable.*

THREE thousand women in the city of Toronto vote at municipal elections, almost universally for temperance officers.

THE correct number of women registering in Boston is 20,216. Over 15,000 voted, but the exact returns have not been received.

WOMAN'S ballot as a temperance weapon will be as powerful as dynamite is destructive.—*Susanna M. Salter, Mayor of Argonia, Kansas.*

Do women not wish to vote? That is the best of reasons why they should not be forced to vote, but no reason at all why they should not be allowed to vote.—*Gail Hamilton.*

LET us be honest and admit what we all know, that the real reasons why the right of suffrage is denied to women is because there is just trace enough of ancient barbarism lingering in our civilization to bar them out.—*Hon. John D. Long.*

Of course I am a suffragist. I have so long believed that it was right for women to have a share in the government that it seems like the first axiom I learned in geometry: "A straight line is the shortest path from one point to another."—*Maria Mitchell.*

THE principle of woman suffrage is not so palpably absurd that a chain of reasoning ought to be pronounced unsound merely because it leads to female suffrage. Every argument which tells for universal suffrage of males tells equally in favor of female suffrage.—*Macaulay.*

WHY should men not worth the scrapings of the porridge kettle, financially, be permitted to sit on the front seats and make laws calling for the expenditure of money, and the property of woman be taxed to foot the bills? What sort of justice is there in such a state of affairs.

SAN DIEGO COUNTY, CAL., W. C. T. U. has resolved, that, whereas, woman has proved her executive and legislative ability in all the fields she has entered, and whereas, the women of the country are, to a large extent, the educators of the youth of the country, and, whereas, their power is almost uniformly used for the elevation and purifying of public sentiment, woman's vote is a necessity for the best good of the country.

THE late election in this city made so many converts to woman suffrage that all the Boston papers opposed to equal rights for women are anxiously trying to persuade their readers that they must draw no conclusions favorable to full suffrage from this remarkable school election. The women, having been faithful in a few things, must on no account be made rulers over many things. We doubt, however, whether the best eloquence of the *Herald* and *Journal* will be able to counteract the influence of so striking an object-lesson as was given at all the polling-places Dec. 11.

"How many of you girls, if you were twenty-one and could vote, would go to the polls tomorrow?" inquired a teacher of one of our high schools, wishing to test the strength of woman suffrage sentiment. Twenty-eight out of a class of thirty-eight eagerly raised their hands.—*Indianapolis Organizer.*

LET a woman go to India with an avowed purpose of bettering the condition of the natives, and we call her a missionary. In any town in the State, let her show her interests in the laws that may effect our boys and our home, and the foulest, dirtiest, profanest man pronounces her a crank and a long-haired fool.—*Iowa Home Journal.*

MRS. A. S. DUNIWAY, of Oregon, believes in prayer, but not in trying to make prayer do the work of votes. She says: "One little ballot in the hands of the wickedest man in America will outweigh at any election all the prayers of all the holy women in all the churches." An increasing number of women between Maine and Oregon are coming to the conclusion that their "influence" for good would be more effective if they could vote as well as pray.

MANKIND has always admired courage. Formerly men held in profound respect the physical courage that scorns bodily danger; in these latter days they bend the knee to a nobler intrepidity, and Elizabeth Cady Stanton, at Washington, struck its high-water mark when she said to her sisters: "I want to give you a word to take to your homes. As soon as you see a grand truth, utter the grand truth; and though you may be ridiculed in starting, as the years go by it will be received."—*Unity.*

"At a recent political convention in New York an impulsive speaker forgot that the truth should not be spoken at all times, and exclaimed: 'I tell you what, I would rather have the saloons behind me in politics than the churches!'"—*Ex.*

And why? Because almost all the persons found in a saloons are voters, while two-thirds of the persons found in the churches are women. If women could vote, the church and the home would be potentially represented at the ballot-box as the saloons are now.

It is sometimes said that women must not vote, because in that case they might be elected to office, and "if the mother of a young family should go to Congress, what would become of the children?" It does not seem to occur to these objectors that only one person in a thousand can go to Congress in any case, and that no is obliged to go unless he chooses. The mother of a young family would not be likely to be asked to run for Congress, and would not be likely to consent if she were asked. But she might have a very definite idea as to the sort of a man she wanted to send to Congress as her representative, to make laws for her and her children. A good many profligate and drunken Congressmen would be weeded out if the mothers in their districts had votes.

TEMPERANCE.

MORE than 30,000 children of school age in the city of Chicago are said to be addicted to the use of strong drink.

At Auckland, New Zealand, the Board of Education recently passed a resolution requiring a half-hour's temperance lesson, to be taught each week in all the public schools of the district. This law goes into force next April.

A MAN in New York was fined \$300 for giving tobacco to a giraffe. About the same time a man in Chicago was fined \$5 for selling whisky to children. Take care of the giraffes, no matter about the children.—*Dakota Standard*.

MRS. MARY ALLEN, M. D., of Ithaca N. Y., in an address on "The Laws of Heredity," says: "We have so long been used to think of the liquor-seller as the drunkard-maker that we lose sight of the fact that sweet, pure, Christian women have made drunkards by giving their children a drunken father."

ONE who has figured it all up says two drinks of whisky cost a pound and a half of beefsteak; two beers, a dinner of mutton chops; one cock-tail, an egg plant or head of cauliflower. "What will you take Charlie?" stands for a nice oyster stew for the whole family on Sunday morning. "Set 'em up again!" means sugar in the house for a month.

A YOUNG man was recently found in the Mersey, drowned. On a paper found in his pocket was written:—"A wasted life. Do not ask anything about me; drink was the cause. Let me die; let me rot." Within a week the coroner of Liverpool received over two hundred letters from fathers and mothers, all over England, asking for a description of that young man. How suggestive is this fact! What story it tells of homes desolated by strong drink!—*Manford's Magazine*.

MAYOR HEWITT, of New York, in a special message to the City Council, says:

"A visit to the great charitable institutions maintained by the city, containing a population of over fourteen thousand persons, will convince the most skeptical observer that the chief causes of crime, sickness and poverty, which fill these institutions with their tenants, is to be found in excessive indulgence in intoxicating liquors. If the abuse of this traffic could be prevented there would follow an immediate and very low reduction in the general criminal business of the city, by which the moral tone would be raised and taxation would be lessened." The same is true in every city of the United States. The open saloon is the universal public enemy.

Both houses have very rigid regulations forbidding the sale of any kind of intoxicating liquor in the Capitol building. For years there has not been the slightest pretense of enforcing these rules. Yet both houses prefer to let these rules stand as a practical lie rather than to assume the courage necessary to repeal a hypocritical formula which cannot be enforced. Seventy-five per cent of the senators are drinking men. There

are a few of this large percentage who drink to excess. There are in the Senate half a dozen perhaps, who can properly be classed as hard drinkers; yet they are of the quiet and undemonstrative kind. There never have been any scenes in the Senate of a disgraceful character caused by drunkenness for many years. When the hardest of the Senatorial drinkers are the deepest under the influence of liquor, that fact would not be apparent to a casual observer in the gallery. The majority of the senators who drink hard have cultivated their legs so that no matter how muddled may be the upper story of these statesmen, their legs remain sober and carry them about safely and decorously. There are a great many temptations to drink in the Senate. In the first place, it is a very close corporation club. Its members are brought into the most intimate contact, and very soon forget the party differences which ordinarily separate men of different political beliefs. The senators are dined continually. At the dinners in their honor four or five wines are given, in addition to the brandies and liquors which are brought in at close of the repast. The senatorial gentlemen, as a rule, neglect none of the items of food or drink upon the bills of fare at these dinners. The natural result is that the next morning they have an appetite which needs a continued supply of some sort of drink to maintain their physical tone.—*T. C. Crawford, in New York World*.

The following figures are particularly significant just now to be considered by the people, and especially the workman, while the discussion as to his wrongs by his employer is going on: According to an estimate of a tobaccoist, \$2,000 are paid daily in this city for cigars and tobacco. Calculating the population to be 100,000, and that the consumption here is an average one, then the entire population of the United States pay about \$500,000,000 in one year. And, according to the government reports, about \$900,000,000 worth of strong drink is consumed, making \$1,400,000,000 paid for these two entirely unnecessary and hurtful stimulants and narcotics. These estimates are substantially sustained by a gentleman of Philadelphia, "not a temperance fanatic," who says: "I am more convinced each day that the correct name for hard times is whisky and tobacco, and that the \$20,000,000 spent here each year for building is not quite our whisky and tobacco pocket-money for six days; and incredible as it seems, it is positively so, all the house-building in this city in sixty years is drunk down and spit out (bah) in the United States each year, and mostly by the poor," and which means the wage-workers, Knights of Labor, etc. Then, estimating that one in twenty, or about three millions of the people, consume the strong drink and tobacco it would be \$300 a year to each man, and about \$170 to each for tobacco. The New York Tribune estimates that the people of this country drink two gallons of liquor for every bushel of wheat they consume—twice as much for liquor as for bread; and as much for tobacco as for bread.

INDUSTRIES.

There are 12,000 Women Knights of Labor in America.

Ella T. Braman, of New York City, is notary public and commissioner for the other States and Territories.

Miss Ellen M. Sprague has been employed for twenty-three years as cashier, book-keeper, and confidential clerk of a publishing company in Chicago.

Mrs. Sally Crandall, after keeping the Watch Hill lighthouse for twenty years, has returned to Westerly, R. I. Mrs. Crandall had discharged her lonely duties faithfully.

The Woman's Alliance of Chicago representing twenty-six organizations of women, will take steps to enforce the factory ordinance of Chicago and the compulsory education law of the State.

Miss Mamie Davis, a telegraph operator at Jacksonville, Fla., stayed at her post all through the yellow-fever epidemic, and is receiving merited praise for her fidelity to duty.

Mrs. Kate Richmond, who is at the head of the Wisconsin Lead and Zinc Company, is one of the most successful mining operators in the country. The company has a paid-up capital of \$500,000, and its entire business is personally supervised by Mrs. Richmond.

Alice Stone Blackwell says: "More than sixty per cent. of adult English women, married and unmarried, are working for daily subsistence, and the number multiplies every year."

Miss Edmonia Lewis is a colored woman and gifted sculptor, who has completed a beautiful statue of St. Charles Borromeo in Rome, and sent it to Mr. R. Dixon in Brooklyn, N. Y.

A number of poor but educated women in Washington go from house to house to clean lamps, sweep parlors, dust bric-a-brac, and do such parts of the work as cannot safely be trusted to common servants. This new departure is highly praised.

A woman seventy years old has just taken out a patent for a sewing-machine needle that does not need threading. There is a beveled slot in one side of the eye through which the needle slips. It seems very simple, and all who have seen it wonder why nobody thought of it before.

Misses Dora and Edna Gamble are artists in Los Angeles, Cal., who, after spending the past year on their ranch in the Antelope Valley, have opened a studio in the city, and show among other mountain studies more than a hundred different varieties of wild flowers.

In one of the largest saving banks in Massachusetts, outside of Boston, a woman is employed as clerk who is said by experts to do the work of two men, having perfected an original method of keeping the bank's accounts entrusted to her; and all this for less salary than would be paid to one man in her position.

The annual address of Mrs. L. M. Barry, the general investigator of woman's work for the K. of L., will be translated and circulated through Germany and France with the hope of securing agitation that will improve the condition of working women in those countries.

Mrs. Charles A. Doremus, daughter-in-law of the well-known chemist, is one of the most successful American playwrights of her sex. Two of her plays have been performed by professionals one, "The Circuit Rider," by Rosina Vokes; the other, "Freaks," by Lotta. They are said to show genuine dramatic gifts and a keen sense of humor.

This is the story of eight sisters living near Belfast, Maine. Their mother is dead, their father is feeble. The sisters carry on the farm, keep several cows, a horse, four oxen, from three to five hundred hens, hogs, a brood of ducks and thirteen cats. They get up their own wood in winter, at which season only two of them are at home, the others being employed at Boston, where two of them are teachers in the public schools. All spend the summer at home and carry on the farm.

The *Missionary Record* tells of a colored woman, Mrs. R. Whetsel, who supplies ice to St. John, New Brunswick, to the town of Carlton, and to all the great vessels and steamers in port. Her husband, in company with white men, carried on the business. He died about four years ago, and the widow could not secure a fair adjustment of affairs. With four children to support, she determined to engage in the ice business herself. She managed to get a ten-year lease on the nearest lake, built her ice-house, and she is now the sole dealer in St. John, employing eight men, all white—in winter she employs sixty; runs five teams, handles over ten thousand tons of ice, and does more than a \$10,000 business annually.

A reporter of the *New York Sun* has a window that commands a view of a sewing-room over a gentlemen's furnishing store. Every morning when the reporter gets up he sees a slender girl sewing by the work-room window. Often when he comes home at night she is still there and still sewing. She is making eyelets in shirt fronts. It is nice and delicate work, though she does it with the persistency of a machine. She takes thirty stitches every minute. That is 1,800 every hour or 18,000 every day. In a week she takes 108,000 stitches. Her hand moves a yard for every stitch. In a week she measures off precisely six miles and a quarter of space with that hand. The pay for this prodigious amount of labor is \$1 a day, and she is considered a high-priced, skilled work-woman.

Do not press your children into book learning, but teach them politeness, including the whole circle of charities which spring from the consciousness of what is due to their fellow beings.
—*Spurzheim*.

EDUCATION.

THERE are 11,000 women in the Liberal Associations of England.

THERE are now about forty ordained women ministers in the Universalist Church.

MRS. HENRY S. BLAIR, wife of Senator Blair, of New Hampshire is a trustee of the State Normal Schools.

THERE are too many churches in which women do all the work, and the men hold the offices.—*Christian Register*.

IN Waltham, Mass., 1,050 women voted for school committee last week, or more than ninety per cent of the registration.

THE highest classical honor in the London University fell to a young lady, Miss Mary Lousia Worley, of Girton college, Cambridge.

MISS HELEN GLADSTONE, vice-president of Newham, after eleven years' experience at Cambridge, is convinced that the "full cultivation of women's intellectual powers has no tendency to prevent them from properly discharging domestic duties.

THE paper of Miss Mary E. Byrd, assistant in in the mathematical department of Carleton College, on "Popular Fallacies about Observatories," delivered at the laying of the corner stone of the new observatory, last fall, is being extensively copied by scientific papers in England and on the Continent.

MRS. LEONORA M. BARRY is working to secure legislation on behalf of the children of Pennsylvania, 200,000 of whom are deprived of the privileges of common school education, and 125,000 of whom are employed in workshops, factories, mines, and mercantile industries.

As Wm. E. Gladstone, the great English statesman and politician is growing older and feebler, Mrs. Gladstone is taking up active political work. She says that women who wish to labor for the Liberal cause should be organized, and a few days ago she presided over and assisted in the organization of a Woman's Liberal Federation in London.

A RECENT careful study of methods at Cornell University shows that there is no diminution of effort because of the presence of women in the lecture and class rooms. On the contrary, the women are an incentive to the young men, and the influence of the two sexes in their work is found to be wholesome and helpful.—*Boston Herald*.

MISS CARRIE A. HALL is one of the founders of the National Grange and it was on her proposition that women be admitted on equal terms with men. No grange can be organized, it is said, in any town, even if every farmer desires it, unless the wives of the prospective members will take part, and women are eligible to any office in the order.

MISS MARY STEARNS voted for school committee on the 11th inst. in Lynn. She is seventy-seven years old, but went out in the rain of that day.

"Bromley, what's the matter? You've got a dreadful doleful look."

"Well Darringer, the fact is, things aint just right at home."

"Your mother-in-law come, eh?"

"Gosh no! She's gone. I haven't had a square meal since."

PRESIDENT SEERLEY, of Smith College, at the meeting of the Congregational Club in this city on the 28th inst., said that whether women were capable of higher education was no longer a question. Here are the women themselves to prove it. He declared that the health of women improved under college drill, and he did not believe a collegiate education rendered women less likely to marry.

MISS FAWCETT, daughter of the late Postmaster-General of England, applied to a famous mathematical "coach" at Cambridge to be taken as his pupil. She was rudely repulsed, the uncivil tutor declaring that he "would take no tabbies." The same Miss Fawcett has been systematically beating the best men of her year at the Trinity College examinations, and will doubtless be senior wrangler for the coming year.

It is a whimsical fact that men seem comparatively willing that women should enter any profession except their own. The lawyer is willing that they should be doctors and the doctor thinks they may plead at the bar if they desire to do so, but each prefers to keep them out of his own professional garden plot. This is true of ministers with added emphasis, for here we have the pride of sex plus the pride of sacerdotalism.—*Frances E. Willard*.

THE New York *Tribune* says: "Women are studying medicine in England in thorough earnest. At the recent examinations at London University, ten of the nineteen passes for honors were taken by women. In anatomy they took three of the six honors. In physiology they secured four out of six. In materia medica only did they fall behind, and even there they got three of the seven honors. In the face of such a record the opponents of medical education for women are feeling a trifle uncomfortable."

THE Earl of Salisbury, prime minister of England, took occasion, in his address before an audience of some 6,000 people in Edinburgh, recently, to speak as follows:

"I earnestly hope the day is not far distant when women also will bear their share in voting for members in the political world, and in determining the policy of the country. I can conceive no argument by which they are excluded. It is obvious that they are abundantly as fit as many who now possess suffrage, by knowledge, by training and by character; and their influence is likely to weigh in a direction which, in an age so material as ours, is exceedingly valuable—namely, in the direction of morality and religion."

THE BROTHERHOOD.

FEBRUARY, 1889.

EAST SAGINAW, MICH., January 10, 1889.

Editor Firemen's Magazine:

As the old year has almost gone we cannot let it go without saying good bye and giving praise for the good done in its name. Saginaw Valley is still on deck although the strike has hit us pretty hard. We still have sixty members, who are hale, hardy, happy fellows, most of whom are married and have happy little homes of their own. We have quite a number of members who have been promoted for more than a year, and at each meeting we tremble for fear they will call for a card, and I tell you we should miss them more than they know. Death has only made one vacant chair in our circle in four years, and the sister he left us is doing well. Five or six of our Brothers are boarding with her and so she is making a good living for herself and little son.

Our fourth annual ball was a success. Everybody had a good time and the engineers lent us a helping hand by buying a ticket and lending their handsome faces to us the night of the ball to help entertain our lady friends, for no matter how much they think of us firemen, they will leave us to dance with an engineer every time.

Christmas has come and gone, but it brought us all presents and love tokens that will remain with us until the end of our lives. And now we are waiting for old '88 to die, and while it is going we shall give praise to the Grand Master for all the good things we have had and the good health we enjoy.

I will say a word to the brothers who may read these few lines, and that is, don't get discouraged because the assessments are so high, but *hold on fast* and we will yet come to the front and the world will see that the Brotherhood is built upon a solid foundation and is made up of men whose nerves are as strong as the iron horses they ride, and as steady as the rails they see the headlight flash upon when dashing along with precious lives in their charge, when they know that in an instant their mangled remains may be unrecognizable, still they falter not. Do any of you think you are doing a duty to your loved ones to take the assurance of a living from them in case you fall by the wayside? Your beloved wife may have to face the cold world, your babes left to the cold mercies of this world, all because you love the pleasures a few dollars will bring better than to keep an insurance upon your life. No, brother, stand by the B. of L. F. and your wife and babes will be cared for. We know how it is, for we have a case in our midst, and experience is a good teacher. With Bro. John Kull at the head of 286, there is no danger of her going to wreck. Good bye, and God bless each one of you, as the sentiment of the writer.

286—C.

For Firemen's Magazine, the "Organ of Progress."

FEDERATION.

Of a good time coming, all have read, in books of prose and song,
The good time coming when the right shall triumph over wrong;
And though hope's deferred, and faith is weak,
There'll surely come a day,
When toilers, like the millionaires, shall be decreed fair play.

When the good time comes that's coming, there'll be heard throughout the earth,
Sublimar anthems than were sung at Creation's birth.
Then the Sons of God, and the morning stars, in concert jubilee,
May sing the good time coming's come, and working men are free.

When the good time coming's come, and each royal Brotherhood,
In FEDERATION bonds display zeal for each other's good.
On LABOR'S BANNER flung to the breeze and flashing in the sun,
Shall be inscribed in shining words, "the good time coming's come."

—Engineer.

CLEVELAND, OHIO, January 12, 1889.

HOUSTON, TEX., January 5, 1889.

MR. EDITOR:—I notice that the correspondence department of your popular *Magazine* has not thus far contained any notice of Bayou City Lodge, No. 146, the pride of Houston's organizations. Therefore, with your permission, I will offer a few items for publication. The membership of No. 146 is as intelligent a body of men as ever handled pick and scoop, and is an honor to the B. of L. F. organization. I have had some connection with the members of the organization and know something of their ability and integrity, and a nobler, bigger hearted body of men, wage-workers and bread-winners, never faced the storms of death and hardship than the B. of L. F. and this is especially true of the members of 146.

Our old friend, Fred Keeler, of the Order, so I have been informed, has been advanced, and is now master of the throttle on the S. & E. F. R. R., as is also the case with a number of others of the Order. Charlie Scanlin is handling the black diamonds on the big 713. He has thrown up his position as a manufacturer of letter boxes, and is now deeply engaged in studying the rules of etiquette and marriage. He is quite a ladies' man, indeed, a great admirer of the fair sex. I think he will soon pull out from the company of the old stags, as he is now deep in the sea of love, and gradually drifting to the shore of matrimony.

The growth of the Order has been rapid, and more especially the increase of the membership of No. 146. A new member was initiated on the 20th inst., recommended by A. E. Dunn, the happy father. Before the event the size of the Denim pants was 22 in. Now the tailor is ordered to make them 32 in. Mother and boy doing well.

Respectfully,

S

COGITATION AND INTERROGATION.

BY SWITCH.

MR. EDITOR:—I see by the *Magazine* that you have been pleased
To print my interrogations and append a few
replies,
And it makes me feel as jolly as if I'd been
green-eyed
With the best of headlight oil from my heels to
my eyes.
And now I want to ask
(Though 'tis not a pleasing task,
And I would greatly prefer some other job)
If the B. of L. E.
Ought not to plainly see
That towards firemen it is emulating the corpo-
ration snob?
That by passing certain laws the Order would
have it appear
That a member of the B. of L. F. is not an engin-
eer's peer?

Manifestly, it does look that way to thou-
sands of Brotherhood firemen who say it is
ostracism, pure and simple, totally unworthy
of the enlightened age in which we live,
and of the intimate relations which must
necessarily exist between members of the
two great Brotherhoods.—ED. MAGAZINE.

MR. EDITOR:—I am no flatterer, I have nothing
to gain
By peddling taffy on a stick; I'm not built that
way.
I just fire an engine, and permit me to explain,
I expect to get a throttle at no very distant day.
Now, would you advise,
When I gain the prize,
For me to button back my ears and elevate my
chin,
And say to the boys
Who have shared all my joys,
"If the B. of L. E. will take me in,
I am going to desert you. Big 'twin' I'll be
When I wear the badge of the B. of L. E.?"

Well, no, we would not so advise. We
are not an admirer of apostasy. We think
the B. of L. F. is not required to doff its hat
in the presence of the B. of L. E. If it has
any superiority we have failed to detect it.
Vaulting ambition is not virtue; bravado is
not bravery. Self-respecting members of
the B. of L. F. will know how to act when
the proposition is made to renounce their
parent Brotherhood for membership in the
B. of L. E.—ED. MAGAZINE.

MR. EDITOR:—I am only a fireman, please ex-
cuse the repetition,
The fact I have stated several times before,
And though the avocation is without special
fruition,
Every day I am wiser than I was the day before.
Thus the cab is a college
Where I accumulate knowledge,
And when I get my diploma, don't you think
I'd be
A sort of a devil's imp,
A poltroon or a pimp,
To shake the B. of L. F. for the B. of L. E.?

We are not disposed to apply epithets and
still, it must be admitted that Bro. Switch
permits his cogitations to run along in a
common sense groove.—ED. MAGAZINE.

FREDDIE MARLING.

These lines are dedicated to the memory of
Freddie Marling, who died of scarlet fever in
Cedar Rapids, December 14, 1888.

Freddie was a bright little boy of three years
and four months, and the only child of Frank
and Lide Marling. His father is a fireman on
the B. C. R. & N. and a member of the B. of L. F.

We thought of the bright to-morrow,
And Christ was so very near,
Nor thought of the coming sorrow
Nor dreamed of the dropping tear.

Our darling Freddie was playing,
As happy as happy could be,
And mamma was just now saying
What she'd put on the Christmas tree.

The wind in the chimney sighing,
And Freddie stopped his play,
In wonder to mamma crying,
What it was the wind did say.

Oh how those dear eyes danced with glee,
As mamma said with a smile,
"Dear, Santa Claus is saying that he
Will come in a little while."

"And when Santa Claus does come,
What shall he bring our boy?"
"A hobby horse, a chair and drum,"
He answered with childish joy.

But alas 'or the bright to-morrow!
Our baby was laid away,
And our hearts were seeped in sorrow
On that beautiful Christmas day.

We think the angels were waiting
With the children gone before,
To give him a Christmas greeting
On that sunny sinless shore.

We think their Christmas cards,
Were such as the seraphs sing.
We think the gifts they brought him,
Were better than we could bring.

We'll wait for the bright to-morrow
When parting shall be no more,
For a Christmas without sorrow
On that sunny sinless shore.

—J. P. Marling.

HARTFORD, CONN., January 7, 1889.

Editor Firemen's Magazine:

Permit me to say, through the columns of the
Magazine, that Charter Oak Lodge, No. 285, is get-
ting along well, notwithstanding the steady fire
of the "Q." strike. Most of us have held out to
the last, and we are now preparing for our third
annual ball which we hope to make a grand suc-
cess. Quite a number of our boys have gone
from the left to the right. Bro. Dwyer is run-
ning a passenger, and Bros. Kelleher, Wagner,
Cummings and Shea are getting along splendid-
ly. The New England is now doing a good busi-
ness. The members all sympathize with Bro.
Wagner, who, some weeks since, lost his wife.
Bro. Thayer, since his promotion, is doing well
on the N. Y., N. H. & H. The Poughkeepsie
bridge will soon be open and will largely increase
the business of the H. & C. W. Road, and I think
when the boys have to sling coal into a 10-foot
fire-box, they will pity us on the New England.

Slash Bar.

For the Magazine:

THE OLD MAN'S SONG.

Pile fresh logs on the blaze;
Oh, I love the hearth fire's glow,
When winds rave above many a grave;
And heavily falleth the snow.
Let them crackle, sparkle and glare,
Bright forms deftly cast
On ceiling and wall; memories recall
Of happier days long past.

By the blazing logs I'll sit;
As the old year takes its flight,
And faces see, ever dear to me
In the glowing embers to-night—
But some are dying, aye, some are dead,
Like hopes of departing year,
The shadows fall, on ceiling and wall
Shapes spectral, now appear!

Twelve! chime the city bells.
Good bye! old year good bye!
The shadows prance, in a merry dance,
Then why should an old man sigh!
Pile fresh logs on the blaze,
Oh I love the hearth fire's glow,
When winds rave; above many a grave,
And heavily falleth the snow.

—John Tierney, Jr.

HOISINGTON, KAN., January 1, 1889.

Editor Firemen's Magazine:

May I have space in your valuable book to say a few words in regard to our great and noble Order, the B. of L. F.? We have just organized Long Division Lodge, No. 397, located at this place, and can assure you, that in the near future, we will have one of the best Lodges west of the Mississippi. Our Master, Ed. Heath, is a man of good morals and intelligence, who is respected by all who know him, and by his good endeavors I am sure of success. Our members, who are a lot of industrious fellows, are striving hard to merit success, and by patience and perseverance will give No. 397 prominence and influence. Before I close I would like to say a word in regard to our Grand Organizer. My first meeting was a cordial one, and I found him to be a man of prepossessing and fascinating appearance, also a most consummate and sensible talker. The Brotherhood should feel proud of such a man. It could not have found a man better qualified for the position he now holds. Bro. Hanahan is the right man in the right place. May success crown all his undertakings is the wish of a brother.

E. E. Brown, Sec'y.

MISSOULA, MONT., January 9, 1889.

Editor Magazine:

Being a subscriber, and a constant reader of our valuable *Magazine*, I have concluded to write my views on federation.

According to our local papers the long and well sustained strike on the "Q" is over. After holding the fort eleven months, never-ending credit is due the boys who maintained their honor in the long struggle for their rights.

According to the statements made in the papers the boys have lost much, but the loss is overestimated. The fact is, they have gained a victory, for the lesson they have taught Stone and a few more of his kind, in the United States

and Canada, will prevent them, in the future, from trying the same racket.

Now that the "Q." strike is off, federation ought to be the order of the day, and the sooner it is taken into consideration the better it will be for all concerned. Capital is combining, forming alliances, federating to maintain its supremacy, and should be met by federation on the part of workingmen, particularly railroad employees to protect their interests and enable them to live.

There are strikes brewing all over the United States and Canada, especially in Canada and the Western States, and they may come sooner than we expect. But we must think before we act. The workingmen of America to-day are worse off in some places than the poor paupers of Europe, and agents are employed by capitalists in every Atlantic and Pacific seaport town to bring over these people, and when they come, they must take what they can get, and they will work for one-third the wages, which American workingmen ought to receive. Viewing these facts as they exist it becomes apparent that the only hope of American workingmen is in federation. With federation we can hope when the next struggle comes to maintain our rights, but without federation defeat is certain.

Respectfully yours,

Federation.

ARMOURDALE, KAN., December 25, 1888.

Editor Firemen's Magazine:

Kaw Valley Lodge, No. 313, has thirty-one members in good standing, who are always prompt in paying their dues and assessments. As they are all good boys, I take the liberty of informing the readers of the *Magazine* what some of them are doing in the service. Bro. M. S. Laughton is running engine 1492 on the N. P. Bro. Haddock runs the 1354, and has a soft snap of it, too. Bro. Larson is on the extra list. Bros. Benard and Smith are running on the road, extras, out of Wamego. Bros. Knight, Myers, Parmelee and Peterson are firing engines 820, 494 and 823, on trains 201, 203, and 204, there being four crews on three engines. Bro. McCormick is in the real estate business in Armourdale, and doing well. Good for him. Bro. Mc. is a whole-souled Brotherhood man. Some of the boys are trying hard to organize a Lodge at Wamego, but it is the candid opinion of the writer that a Lodge at Wamego would not survive very long as the boys do not lay there long, and there would never be enough members present at any one time to have a quorum, and the Lodge would decrease the membership of No. 313, to such an extent that one or the other would go down. The shops being here, I consider this the right place for the Lodge. Bro. Laughlin procured two photographs from the Brooks Locomotive Works and two from the Baldwin Works, of their make of engines, and they adorn the walls of our Lodge rooms and are appreciated by the members.

Respectfully,

L. S. M.

TO MRS. NELLIE BLOOM.

[In Reply to "Waiting."]

My dear madam: Your lines headed "Waiting,"
 Set fancies afloat through my brain,
 And my pulses were frenzied dilating
 'Twixt pleasures and exquisite pain;
 For I thought of the fellow you sighed for,
 How careless he seems to have grown;
 Pray what did he make you his bride for
 If nightly he leaves you alone?

I wish it were me you expected,
 Your lips all aflame to be pressed;
 I never such joys rejected,
 I love to be fondly caressed.
 I'll take such delights in the gloaming—
 Some say they taste sweeter in gloom—
 Indeed I would never go roaming
 And leave you alone, Mrs. Bloom.

The moments move slowly when waiting,
 They're laggards, and loaded with care;
 Suspense keeps the bosom vibrating
 'Twixt hope and the deepest despair,
 But when the loved darling comes dancing
 How fleet-footed time flies away.
 A night of caresses entrancing
 Scarce seems a brief hour until day.

Perhaps in the Lodge room debating
 Your darling remained in his pride,
 And cared not a straw how long waiting
 Disfigured the face of his bride.
 Perhaps he was off with another—
 The rascal! such actions are wrong—
 While lonely his wife tried to smother
 Her grief in a dolorous song!

Oh! Madam, I humbly implore you
 To take no offense as I write.
 Were I near I would help to restore you
 The darling you sighed for that night;
 And if I would fail in securing
 The strolling, indifferent elf,
 I'd yield to your song so alluring,
 And cheerfully give you myself.

—Shandy Maguire.

SCHRIEBER, ONT., January 15, 1889.

Editor Firemen's Magazine:

Perhaps a few lines from this part of the continent may prove acceptable, as showing the progress and development of the Brotherhood. Comparatively speaking, we are a new Lodge, the month of August last having witnessed our inception. Although our membership is not large, yet the degree of interest manifested in the affairs of the body is extremely encouraging. Many of the "boys" are old members of the B. of L. F. and have belonged to Lodges at other places, and to whom we are indebted for considerable instruction in Lodge business. Trade is not brisk with us this winter, consequently many of the boys have been put back—a disappointment for those who have sat on the "right-hand side." The C. P. R. is using "moguls" for freight on this division now; it was at first rather hard on the stoker, but having got the swing he gets there in good shape. We should remark that the *Magazine* is much read and appreciated, and we desire to express our thanks to all contributors to its columns for their readable and entertaining matter. In conclusion, Mr. Editor, we would wish, through its columns, to thank Bro. Chas. Unwin, of Unwin Lodge, No. 305, Rat Portage, for his kindly letter which we are in

receipt of and duly acknowledge, and beg to tender him our sincerest regards for his well-timed advice in matters relating to Lodge affairs which we were unacquainted with. We hope soon to write again and trust to have further success to record.

Edward Hartley,
Mag. Agent.

WINSLOW, ARIZONA, December 30, 1888.

Editor Firemen's Magazine:

Thinking a few items from Pacific Lodge, No. 173, would be acceptable and help to fire the *Magazine* for January, or some other issue, I am induced to say that 173 is in a thriving condition, having forty-one assessable members December 7th. Bro. E. W. Davis has been promoted, and is now manipulating the throttle of engine No. 7. Bro. Frank Georges has been promoted to switch engine in the Albuquerque yards, and Bro. Simeon Frost, has been promoted to hostling. May they prove successful in the different positions is the wish of all, as their future prosperity is a stepping stone for those that are to follow.

Chap.

Unknown Addresses.

J. M. DOWNEY—Formerly a fireman on the M. C. R. R., at Detroit, Michigan, will confer a favor by sending his address to his brother, John H. Downey, Albuquerque, New Mexico.

GEORGE P. WRIGHT—Is requested to correspond with W. E. Burnes, No. 122 Newberry Avenue, Chicago. Mr. Wright went to California about a year ago, and is supposed to be somewhere in the "Golden State."

HENRY H. GERNISH—Last heard from was in the state of Missouri, supposed to be railroad-ing. Anyone knowing his whereabouts will please correspond with B. J. Gillis, No. 33 Village street, Boston, Mass.

PAUL GOODRIDER—Is requested to correspond with Miss Mary Goodrider, who is anxious to know where her brother is. Mr. Goodrider is an engineer and when last heard from was in Bellevue, Ohio. He may be dead, but any one having any information will be doing a favor by writing to his sister, No. 7 Silver St., Syracuse, N. Y.

A Kansas City, Mo., dispatch says: The Burlington & Rock Island systems, having experimented with the mogul locomotive, have each given large orders for the construction of these engines, to be put in general use on their roads, the Chicago, Kansas & Nebraska line having given an order for seventy-five to the Rogers Locomotive Works last week, and the Burlington having nearly double that number already in use and now in process of construction. These locomotives are a radical departure for high passenger speed purposes and for fast stock trains from the old style of engines, being compactly built, running with two driving wheels and a radius bar, emitting but little smoke and almost no clinders, and so arranged that the weight available for adhesion is a larger per cent. of the total weight than any other kind for trunk lines yet constructed. Recent improvements in fire-boxes, smoke arches, and general arrangements for combustion have all greatly increased the economy of these engines, which were hitherto satisfactory.

Personals.

Howdy! Bro. Hannahan?
 I really like your style;
 I like the way you wear your hat—
 I like your winning smile.
 And when you do address the boys
 On principle and law,
 I like the way you show your teeth
 And wag your powerful jaw.

COLONIAL Lodge, No. 119, had the pleasure of a visit from P. Carrow during the holiday season. The professor is a favorite of the Colonial boys, and the greetings were mutually agreeable.

BRO. W. CARMICHAEL, of Colonial Lodge, No. 119, is the proud father of a twelve pound boy, and the exceedingly pleasant domestic incident has brought "Billy" a shower of congratulations.

THE household of Bro. and Mrs. C. G. Hall has been blessed with a young daughter. Bro. Hall is now located at Sherbrook, Quebec, but still holds membership in Rocky Mountain Lodge, No. 77.

WE notice that Bro. Thomas P. Davis, of Sunset Lodge, No. 177, Marshall, Texas, was recently married to Miss Clara Lottier, one of the fair daughters of the Lone Star State. The *Magnolia* wishes the happy pair a prosperous life voyage.

WE congratulate Bro. A. H. Tucker, of Cerro Gordo Lodge, No. 29, upon his great good fortune of being the happy father of a girl baby. May the blessed gift grow up to beautiful womanhood a ceaseless joy to parents, and to her brothers and sisters.

BRO. C. C. SUTHERLAND, member of J. H. Kirk Lodge, 376, has been promoted to the right-hand side and is now running on the C. & K. N. with headquarters at Goodland, Kansas. His many friends, throughout the bounds of the Brotherhood, will be glad to hear of his success and will wish him a prosperous career.

MORRIS TURNHAM, formerly of Banner Lodge, No. 56, and J. G. McLeod, both members of Clark-Kimball Lodge, No. 113, Pocatello, Idaho, and engineers on the U. P., recently favored the Grand Lodge with a brief visit. These brothers had spent the holidays with friends at Pana, Ill., and were en route to their far western home. It afforded us great pleasure to meet and greet them.

BRO. HARRY M. JOHNSON, *Magazine* agent of Rocky Mountain Lodge, No. 77, Denver, Col., explains his negligence in attending to the interests of the *Magazine* by referring to a matrimonial incident which resulted in giving him a wife. And now that the knot has been tied and the prize secured, he promises better work. As in duty bound we accept the apology, and wishing Bro. Johnson a large share of prosperity and felicity, shall anticipate most excellent reports.

MR. STEWART E. HOGE, late Chairman of the General Grievance Committee of the engineers during the C. B. & Q. troubles, has been appointed manager for the Western Railroad Insurance Department of the Standard Life and Accident Insurance Company. No better appointment could have been made and we take great pleasure in bespeaking for Mr. Hoge the good will of Brotherhood firemen.

WE felicitate Bro. C. J. Singleton, ("Cotton") member of the Grand Executive Board, and a member of Beacon Light Lodge, No. 111, Mattoon, Ill., upon the notable triumph by Miss Rife, of Mattoon, at the great terpsichorean tournament inaugurated by the members of C. Heppburn Lodge, 100, at Evansville, Ind. The prize for the best dancer was a splendid gold watch. Miss Rife's movements were pronounced the poetry of motion, and long will her graceful response to the music of the occasion be remembered by those who had the pleasure of witnessing them, and it was perfectly natural that Bro. Singleton should bear testimony of his happiness by one of those ecstasies whispers of his tuneful throat, which, it is reported, was heard as far away as Henderson, Ky.

THE following personals appear in a recent issue of the *New York Dispatch*:

Firemen Chas. Wilson and T. Dwyer, both of whom belong to Washington No. 13, B. L. F., do good work on trains of the Reading road. They are very good disciples of the B. L. F.

Engineer John Neice, who runs No. 572 on the P. R. R., and his fireman, H. Flaigaut, who were both pretty well shaken up in a recent collision, are both around again, though Flaigaut is not on duty.

Secretary of No. 3, Mahoney, is standing as extra freight engineer now on the P. R. R. He thinks so much of his "Adopted Daughter" that he will not give her up for the B. L. E. Good for Mahoney.

Jake Bohem, a member of "Adopted Daughter," who fires on the P. R. R., was recently put to work on one of the "Jacks." He weakened, owing to the heavy work, and said he wanted something easier.

George H. Vantassel, foreman of the Harlem round house, has just finished an improved bed. It folds up, rings an alarm clock, and puts a man's vest on with one motion. He is very proud of it, and expects to have it patented.

Amusements.

On Christmas night, Guard Rail Lodge, No. 168, B. of L. F., gave its sixth annual ball, which, according to the *LaCrosse News*, was "one of the pleasantest and most successful social gatherings that ever assembled in LaCrosse." The decorations of the hall were such as to make it "a bower of beauty," and it was crowded, with "handsome ladies and gentlemanly men." The music was superb, and "never were high anticipations of pleasure more fully realized." We congratulate Guard Rail Lodge upon the brilliant success which attended its sixth annual ball.

The Railway News-Reporter, published at Omaha, devotes four columns and a half to a union ball, given by the engineers and firemen, at Moberly, Mo., on the evening of December 31. The ball was under the auspices of Division No. 86, B. of L. E. and Lodge No. 54, B. of L. F. Preliminary to the opening of the ball, Hon. Tim Hennessy, Railroad Commissioner, was presented with a suit of broadcloth, which he accepted with felicitous acknowledgments. The opera house was handsomely decorated and on the stage were a number of prominent railroad men. The dancing consisted of quadrille, waltz and polka. The ladies were in elegant toilets and the gentlemen in their Sunday best. The music was all that could be desired, and the occasion, from first to last, all that could be asked for.

We record with great pleasure that the first annual ball, given by Bonanza Lodge, No. 194, at Missoula, Montana, was a brilliant success. The K. of P. hall, in which the dancers assembled, was beautifully decorated with large national flags, locomotive headlights, evergreen mottoes, flowers, silken streamers bearing greetings, banners with the date, and many railroad lanterns of red and green colors shed their radiance over the dancers. An elegant supper was served about midnight at the Florence hotel. The dancing continued till about 3 o'clock. Some seventy couples participated in the grand march, led by E. L. Hoilister and Miss M. Dondell. Among the guests were many leading citizens, their wives and daughters, and the company was one of the most brilliant ever seen in Missoula.

At Vancouver, B. C., on the 31st of December, the members of Regina Lodge, No. 278, B. of L. F., gave their first public ball in that city. The Vancouver *Daily World*, in noticing the pleasant event, says: "The walls of the room were draped with evergreens, and flags, and mottoes, and emblems peculiar to the tenets of the society. In a large glass case opposite the entrance stood a miniature locomotive, complete in all its details. At the back of the hall in large letters was the motto: 'Happy New Year; Farewell 1888. Welcome 1889,' and above it: 'Brethren, keep your record clean.' Facing this were: 'Thistle, Shamrock and Rose entwined, but the Maple Leaf forever.' Over the door was: 'Imperial Highway from Orient to Occident.' In the corners were the watchwords of the order: 'Industry, Sobriety, Charity and Protection,' and besides the ordinary gas illuminators and a variety of Chinese lanterns, there had erected in each of two adjacent corners a brilliant locomotive headlight which shone with such dazzling rays as to lend the whole scene the enchantment of fairyland." The music was excellent and the dancing ranged from "off brakes" to "18 miles an hour," the supper was good and at a late hour, with "God Save the Queen," the happy company retired. The *Magazine* congratulates the boys of 278 upon the success of the entertainment.

Deepwater Lodge, No. 368, of Springfield, Mo., held its first grand ball in the Board of Trade Hall, on Monday evening, January 14. Deepwater Lodge is about eighteen months old, with not more than twenty members. The boys were rather timid at the start, for fear their first attempt might prove a failure, but their most cherished hopes were more than fully realized. The committees were too numerous to mention. Suffice it to say they all did their duty, and did it well. There were twenty sets on the floor at a time, and the oncery of the evening was, "the hall is not large enough." A brass torch, a handsome lantern and a box of cigars were raffled off to the most popular engineer, conductor and fireman. John Hill, as the most popular engineer, carried off the torch; Walter McQuiston, as the most popular conductor, received the lantern, and the ladies voted the cigars to John Short as the most popular fireman.

I have stolen a few items from a lady's diary, which, I think, will tell the boys more plainly than I can, how their efforts were appreciated:

"Monday, Jan. 14.—Everything has gone topsyturvy, and consequently everyone is in a bad humor. Finally we made up our minds, as a remedy for the blues, to attend the B. of L. F. ball. Minds once made up we were not long in getting ready. Our preparations were not very elaborate, as we fully intended going merely as spectators. Found the company so good, and everybody having such an enjoyable time, that we were compelled to turn in and enjoy ourselves likewise, which we did to the fullest extent until 2:20 A. M., when we reluctantly departed for home, with the silent comment of 'Well done, brave boys of Lodge No. 368.'"

THE Chicago, St. Paul & Kansas City is asking bids for 1,000 freight cars.

Acknowledgments.

NELSONVILLE, OHIO, December 16, 1888.

To the Members of the Brotherhood of Locomotive Firemen:

DEAR SIR:—I received on the 6th of December from F. J. Kistler, Receiver of Franklin Lodge, No. 9, a draft for the sum of \$1,500, the amount due me on the policy held by my late husband, R. E. Jerrett. Please accept my heartfelt thanks. Wishing the noble Order of the Firemen's Brotherhood a prosperous future, and that it may be to others what it has been to me, a friend to the widow and fatherless. I am

Very respectfully,
MRS. IDA V. JERRETT.

CINCINNATI, OHIO, December 9, 1888.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIR:—I wish to return my sincere thanks to the officers and members of Eureka Lodge, No. 14, for their kindness and attention to my son, Bernard F. Kelly, and for the prompt payment of the claim of fifteen hundred dollars (\$1,500), and also to Mr. Brundage, of Rocky Mountain Lodge, No. 77, in accompanying the remains home. With the best wishes for the prosperity of the Brotherhood, I remain

Yours sincerely,
MRS. B. KELLY.

DETROIT, MICH., December 18, 1888.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish through you to thank the brothers of St. Clair Lodge, No. 116, Fort Gratiot, for their many kindnesses to me in my great sorrow. Also Lodges No. 158 and No. 221, for the beautiful floral tributes and their attendance at the funeral of my husband. May God's choicest blessing rest upon you all, and may you meet with your brother where there is no more separation. I wish also to thank the officers of the Grand Lodge for the payment of \$1,500, the amount due me.

Very truly yours,
HELEN E. BABY.

SOUTH EASTON, PA., January 9, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I hereby acknowledge the receipt of a draft for \$1,500.00, the amount of insurance due me on the death of my husband, Charles Menninger. I desire to return my sincere thanks to the Brotherhood for the money, and I also wish to express my appreciation of the kindness and attention shown my beloved husband, and the respect shown him after death. Words are inadequate to express the gratitude I feel toward your noble Order. I also tender my heartfelt thanks to members of the Brotherhood of Engineers for showing their respect, by draping their engines. With best wishes for the prosperity of all brotherhoods, I remain your sincere friend,

MRS. CHARLES MENNINGER.

MONONGAHELA CITY, PA. Dec. 11, 1888.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Allow me to return to you my heartfelt thanks for the payment of the sum of fifteen hundred dollars on the policy of my late son, Harry Dixon. I also desire to express much gratitude in behalf of myself and family to Holbrook Lodge, No. 378, of which my son was a member. Also for the respectful and sympathetic manner in which they, with others, assisted in performing the last sad rites at the funeral of our dear son. I trust we shall ever hold you in grateful remembrance, and I feel constrained to add, "Be ye also ready, for in such an hour as ye think not the Son of man cometh."

Sincerely yours,
HENRY DIXON, SR.

Correspondence must in all cases be brief and to the point.

Subscribers must begin with the January, April, July or October number and expire with the year.

Change of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,

TERRE HAUTE, INDIANA.

FEBRUARY, 1889.

SCAB engineers think dead engines, like dead Indians, are the least dangerous.

THE Richmond & West Point Terminal Railway Company now operates 6,700 miles of railroad, and this mileage is not exceeded by more than two railway companies in the world.

WE invite the attention of the readers of the *Magazine* to the advertisement of the "Brotherhood Medical Co.," printed elsewhere. The remedies advertised and sold by this company are highly spoken of by those who have used them, and are rapidly growing in favor with the public.

THE report is going the rounds of the press that Mrs. Nicholas, czar of Russia, is so fond of work that she makes many of her everyday dresses. The circumstances of her husband are such that she don't have to make her own clothes, but being an eccentric lady, she is fond of sizing-up herself and giving herself fits. She is said to be the only Knight of Labor in Russia.

WE are authorized by F. G. Baker, Esq., manager of "The Matchless Metal Polish Co.," to give the awards of promised prizes to the three firemen who reported the largest sales of Baker's tripoline for 1888. They are as follows: First prize, Lewis Zunkle, fireman P. Ft. W. & C., Chicago; second prize, H. C. Walker, fireman Missouri Pacific system, Taylor, Tex.; third prize, O. L. Lindrew, fireman I. C. R. R., Chicago. The company, at an early day, will announce five prizes for 1889, and we would suggest to Brotherhood firemen the propriety of looking out for the advertisement.

PITTSBURG industries are beginning to experience great inconvenience from a lack of natural gas. Those who have assumed that the supply of this plutonian fuel is inexhaustible may be required to change front.

J. T. HARAHAN, Esq., late General Manager of the L. & N., has resigned to accept a similar position on the Lake Shore railway. Mr. Harahan is one of nature's noblemen, a man who knows what is due an official, and as thoroughly understands what is due an employé. He manages railway affairs, actuated by the strictest sense of justice and receives the respect of the employés of the road. The *Magazine* wishes him good health and prosperity.

THE *Scientific American*, advertised in another column under the head of "Patents," certainly needs no one to "sing its praises," but, notwithstanding this fact, we feel it an absolute duty to the general public, at least that portion of it that has never seen or heard of the paper, to tell them that such a "one is published" at the low price of \$3 a year, and that its true value cannot be overestimated. It stands at the head of all publications of its kind. A file of the paper may be seen at this office and subscriptions received.

SOMEONE has been at work making a careful calculation of the wealth of individual members of the Vanderbilt family and makes the following exhibit: Cornelius Vanderbilt, \$110,000,000; William K. Vanderbilt, \$85,000,000; Frederick W. Vanderbilt, \$16,000,000; George W. Vanderbilt, \$15,000,000; Mrs. Elliot F. Shepard, \$12,000,000; Mrs. William D. Sloan, \$12,000,000; Mrs. Hamilton McK. Twombly, \$12,000,000; Mrs. W. Seward Webb, \$12,000,000. Total, \$274,000,000. According to the figures given the average wealth of the Vanderbilts is \$34,250,000. Admitting that \$100,000 is a comfortable fortune, the Vanderbilts enjoy 2,740 comfortable fortunes.

NOTWITHSTANDING this is a government of the people, by the people and for the people, it is stated that the United States Government has paid more money in the investigation of the disease of hogs than it has for all the diseases affecting the human race. And it is also a fact that notwithstanding the fact that thousands of Americans annually make the tour of Europe, and that American girls are constantly bartering themselves off for the titles worn by European princely beggars, the American hog receives more attention from European governments than is accorded the entire American population. The American hog may not be king, but he is very nearly related to Lord Bacon.

MRS. IDA A. HARPER.

We note in the *Chicago Journal*, a contribution from its Indianapolis correspondent in which Mrs. Ida A. Harper is spoken of in style justly complimentary, as follows:

Mrs. Ida A. Harper, is the wife of Thomas Harper, a prominent attorney of Terre Haute. She contributed a series of articles to the *Terre Haute Mail*, under the head, "A Woman's Opinions," which were reviews of the social and political situations as they pertain to women. They were written in a crisp, taking style, and were universally read and widely copied. She still edits a department in the *Locomotive Firemen's Magazine*, and is a frequent contributor to the *Terre Haute Express* and the *Indianapolis Journal*. Her style is excellent; she has sound opinions, which she expresses pointedly and forcibly. Mrs. Harper has one daughter, now a pupil of Mrs. Sewell's school, with whom she spends much time. She is also a pronounced equal suffragist. She is not a public speaker, but is very efficient in committee work, being one of the officers of the State Suffrage Association. She has also been a faithful friend to the Western Association of Writers, and if the enterprise has failed of success it is not her fault. She has a delightful home in Terre Haute, entertains much and is an incomparable housekeeper. In person she is below the medium height, with pleasing features, fine eyes, and dresses richly and becomingly. She has agreeable manners, talks well, and impresses one with her quality of energy and intelligence.

The *New York World* reports Col. Robert G. Ingersoll as saying:

I have always wondered that the great corporations have made no provision for their old and worn-out employes. It seems to me that the Pennsylvania road, the New York Central and many others—and not only these railway companies, but great manufacturing corporations—ought to provide for their workmen. Many of them are worn out, unable longer to work, and they are thrown aside like old clothes. They find their way to the poor house, or they die in tenement houses or by the road side. This seems almost infinitely heartless. Men of great wealth engaged in manufacturing, instead of giving \$500,000 for a library, or \$1,000,000 for a college, ought to put this money aside, and the interest ought to be used in taking care of the old, of the helpless, or those who meet with accidents in their work. Under our laws, if an employe is caught in a wheel or a band and his arm or a leg is torn off, he is left to the charity of the community whereas the profits of the business ought to support him in his old age.

No one can hope to see the time when great and wealthy corporations will pension their old, worn-out, or crippled employes. To intimate such a condition of things is to assume that by some miraculous proceeding corporations will be possessed of souls, or, that human nature is to undergo a change which will transform men into beings who will make money for the express purpose of seeing how much good they can do with it. We doubt very much if it be desirable for employes to become in any sense or in any degree the dependents of great corporations. The suggestion is in direct conflict with independence. It indicates a condition of things in which the employe becomes an attachment of the corporation to which he looks for sustenance and protection. Let the idea once take root in the mind of an

employe, and from that moment he ceases to be a man of independence in thought or act. He loses all self-respect. The Russian serf belongs to the estate, and the employe who looks to the corporation, instead of himself for protection, under any circumstances, has reached a mental and moral condition which ought not, in this country, to be contemplated with composure. All that is wanted of corporations is to pay their employes honest wages, their fair share of the the wealth they help create. This done, they will provide for old age, and this will be done when labor federates for its own protection.

That many of the laws which relate to workingmen and women are unjust, a foul blot upon the statute books and upon civilization, there need be no controversy, and that they will remain unrepealed until workingmen federate for the purpose of purifying laws and courts, is equally unquestionable.

The *Switchmen's Journal* for January contains the following:

Eugene V. Debs, Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen, has won the distinction of being the first person, prominently identified with another organization of railway employes, after whom a Lodge of our Association has been named. This is the more complimentary when we consider the Lodge is located at his own home, Terre Haute, Ind., where he is known the best. Brother Debs has won a warm place in the hearts of the switchmen under our jurisdiction, all this, too, by simply pursuing a policy that intelligence, progress and conscience points out. How much further advanced would we all be had we many more such men as Eugene V. Debs."

Such generous words are always agreeable and inspiring, but we reproduce them in the *Magazine* for the purpose of simply emphasizing the fact that they breathe the federation spirit, and indicates that it is an easy task to bind all the organizations of railway employes in the conquering bonds of federation.

We notice with special pleasure that S. H. Clark, Esq., First Vice President and General Manager of the Missouri Pacific, has ordered the abandonment of the secret service detective business on his road. The order is entitled to universal commendation. It is in the line of enlightened management. It evinces confidence in the employes which is certain to be returned by fidelity to obligation a fealty which can hardly be expected when it is known that detectives are lurking around for the purpose of earning a living by methods generally regarded as despicable. It is understood that the secret detective service has cost the Missouri Pacific over \$30,000 a year, money, which if judiciously distributed in the way of wages to employes, would be of vastly more benefit to the corporation. The world moves.

ELSEWHERE we print from the Indianapolis *News* a "thrilling" account of the "spotter" on the trail of the railway conductor, well calculated to hold a member of the O. R. C. "spell bound" as he reads it. It is the railway's tribute to the conductor. It ought to make the average blue coat turn red. In reading it the level headed, self-respecting conductor will be able to estimate the amount of faith the railroad official has in his integrity, and getting himself thoroughly saturated with the facts, he should polish up his brass buttons, make his best toilet, take a good look in the mirror, feel of himself all over, and then take a slate and pencil and figure out, if possible, just how much gratitude pressure to the square inch of boiler surface he should carry as due the men who place the "spotters" on his track. We should like very much to publish the result. The facts brought out in the *News'* article are sufficient, we should conjecture, to create a feeling of disgust on the part of conductors beyond the reach of exaggeration. The army of spotters must be enormous—one concern employing 1,800. Will the *Journal* of the O. R. C. give the *News'* article a passing notice?

WE have received an advance copy of the second annual report of the Inter-State Commerce Commission. The report sets forth that "from the best information now available, the railroad mileage of the country on the 30th day of June, 1888, is estimated at 158,781, and the number of corporations represented in the mileage is 1,251." The report, including index, makes a volume of 354 pages, and is as full of valuable information relating to the operation of railroads as an egg is of meat. The report includes an annual report of the Northern Pacific Railroad, by which it is shown that the road, with equipments, up to June 30, 1888, has cost \$162,873,519.33. It is shown that the total number of employes is 8,993, and the total yearly compensation \$6,628,531.04. The highest average wages per day is \$3.87, paid engineers; the lowest is paid trackmen, \$1.51; the average daily wages paid employes is \$2.37. There are eighty-nine general officers, not included in the foregoing, who receive \$309,460 a year, or an average of \$3,365, or \$11.00 a day. It is shown that the 113 general officers and outside and traveling agents, receive \$378,360. There are 449 firemen on the road, and their yearly compensation amounts to \$362,960.76, or an average of \$2.21 a day. The time may come when the country will have the privilege of examining reports of all the great railroad systems, and of knowing not only the exact pay of firemen, but of each general officer. With exact figures comparisons will be more interesting.

News comes from St. Paul that an application has been filed in the United States District Court for an injunction to forbid the Northern Pacific Railroad Company from cutting timber on public lands along the route of the road. It is also asked that the company be compelled to appear in court and respond to thirty-two questions concerning the cutting of the timber. It is charged that the company has cut timber continuously along its lines instead of confining itself to alternate sections covered by its land grant, and that it has wrongfully taken over 280,000,000 feet in Idaho, Montana, Washington Territory and Minnesota, worth \$4,600,000. The ground upon which the railroad company is alleged to have trespassed is only valuable for its timber and material, and forms a part of the timber reserve which it has been the policy of the government to protect and preserve for future use and benefit to its citizens. Unless the company is stopped at once by injunction the entire country now being trespassed upon will be entirely denuded. The government has frequently requested the Northern Pacific Railroad to desist, but "it not only refuses to do so, but threatens to continue cutting the timber." It is understood that the company denies all the charges and will fight the government in the courts.

The Railway Life refers to federation as follows:

A federation that keeps its affairs apart from the public view, even though it could make itself powerful for a time, would certainly become the stamping ground of personal feeling. Look at the Knights of Labor to-day. The vast majority hold by Powderly, and we believe they are right, but is it not a miserable thing to see an organization with such a programme divided into hostile camps over mere questions of personal worth and personal honor? Let the railway employes federate, but let them remember that it is true of small democracies as it is of great ones, that that which keeps all pure is the free air of public opinion. Railway men have nothing to fear from the people unless their demands are unjust. But if they intend only to use their federation for what is fair they can secure the big world as an ally.

The orders of railway employes which have determined to federate have no purpose to keep their "affairs apart from public view." There is no secrecy about the matter. There is no "personal feeling"—no hostile camps, no wrangling over "personal worth." There is perfect equality—and the one supreme purpose is to secure and maintain justice. These orders will federate. If others conclude from any cause to "go it alone," they will be permitted to do so. It is their privilege. Federation is in the line of common sense—and common sense is that which moves the world in the right direction. The organization which antagonizes it, may learn a valuable lesson by reading the history of the bull which concluded to stop the locomotive.

A HOLIDAY HAPPENING.

We reproduce from the columns of the *Terre Haute Gazette* the following notice of a holiday happening, which, however regarded by others, was of special interest to the recipient of the "token of friendship." The *Gazette's* report of the incident is as follows:

At the office of the Grand Lodge of the Brotherhood of Locomotive Firemen last evening an incident occurred so fraught with fraternal friendship as to make it one of the most notable of the holiday season in our city.

It is well known that our esteemed fellow townsmen, Mr. Eugene V. Debs, has earned a national reputation as a friend of the Brotherhoods of railway employes for his intelligent and manly advocacy of their rights and interests on all occasions, and this devotion to their welfare the great Brotherhood of Railway Brakemen last evening acknowledged in a highly complimentary manner.

At the Convention of the B. of R. B. held in the city of Columbus, Ohio, in October last, it was ordered that a medal be prepared, to be presented to Eugene V. Debs as a testimonial of the esteem in which Mr. Debs is held by the Brotherhood of Railway Brakemen and as an acknowledgment of his valuable services in promoting the welfare of the Order.

In response to this action of the Convention, Grand Master S. E. Wilkinson, of the B. R. B. arrived in the city yesterday for the purpose of presenting Mr. Debs with the medal, which is of fine gold and of beautiful and unique design, and so constructed that it can be worn as a badge. It is about four inches long and is surmounted by a spread eagle which, with wide spread wings hovers over the inscription, "A token of friendship." On a bar underneath the foregoing inscription is inscribed, "E. V. Debs." Following this are two shields, highly artistic in design. On the left hand shield is the brake-wheel, surmounted by red and green flags and a red lantern, symbols of the brakemen's duties on the train. On the right hand shield, representing the B. of L. F., is a locomotive with pick and scoop crossed, and the letters B. L. F. inscribed on the pilot, and these two shields are artistically coupled, symbolizing federation. Suspended below the shields is a medallion, about the size of a gold eagle, bearing the inscription, "Presented by Officers and Delegates at the Fifth Annual Convention B. of R. B., Columbus, Ohio, 1888."

Mr. Wilkinson, in making the presentation was exceedingly felicitous, and among other things, in addressing Mr. Debs, said: "You are recognized throughout our jurisdiction as the godfather of our Order. You laid its foundation and have done much to advance it to its present proportions and prosperity. The members of our Order throughout the country, grateful for the assistance you have rendered them, and fully appreciating your unselfish kindness, have made me the bearer of their fraternal greetings, and as a slight testimonial of their friendship and esteem, permit me to ask your acceptance of this medal, in the hope that it will make still stronger the tie of mutual friendship which has hitherto been the boast of our Order."

Mr. Debs having been taken by surprise was not a little nonplussed for a moment, but, recovering his equanimity, responded gracefully. He appreciated the beautiful and valuable token of the friendship of the Brotherhood of Railway Brakemen,—and was glad to know that his interest in the welfare of the Order was deemed worthy of such a splendid recognition. He desired Mr. Wilkinson to be the bearer of his profound thanks to the great Brotherhood he represented, and to assure his associates that in the future, as in the past, he should endeavor, as opportunities offered, to bear testimony of his unabated devotion to the welfare of their Brotherhood.

We have on our table a copy of the holiday issue of the *Galesburg Republican-Register* containing an elaborate write-up of the city of Galesburg, Ill., from its earliest history to the present. Galesburg, among other things, derives distinction from the fact that it is the headquarters of the great and prosperous Brotherhood of Railroad Brakemen, where the office of the Grand Lodge is located, which is in charge of that elegant gentleman, Ed F. O'Shea, Grand Secretary and Treasurer of the Order, as also the Editor of the *Brakemen's Journal*, the organ of the Order. Those who would like to know the history of Galesburg will do well to secure a copy of the holiday issue of the enterprising *Republican-Register*.

THE *Locomotive Engineer* in answering the question, "What is under control?" says: "One very good definition is, that under control is to have your train so that it can be stopped inside the distance you can see—if you see but 100 feet, the train should be run slow enough to be stopped in that distance; if a mile, a higher rate of speed would be under control," and that, "It is always well, however, to have a perfect understanding between the engineers and the officers to whom they are responsible, and when a superintendent is found who says six miles per hour is under control under all circumstances, it is better for the men to run six miles per hour, than to argue on the green carpet about what under control really is."

Of late the *Conductors' Monthly* has displayed a wonderful amount of friendship for the B. of R. B. In the way of sympathy it gushes like a Yellowstone Park geyser, and not only for the members of the B. of R. B., but for the brakemen generally.

There have been several instances of late in which conductors have taken the places of striking brakemen, with the entire approval of the *Monthly*.

Is this to be regarded as a sample of the *Monthly's* friendship and good will?

If brakemen on any of the roads of the country were to strike to-day, or at any time, and conductors were to take their places, would the *Monthly* uphold and defend the action of such conductors?

When and where has the *Monthly* rebuked conductors for taking the places of striking brakemen? (Will the *Monthly* give date and page where such rebuke can be found?)

When the B. of R. B. was in its infancy and struggling for a foothold, will the *Monthly* state when and where, (giving issue and page) it gave the youthful and inexperienced Order the benefit of kind words?

We respectfully ask the *Conductors' Monthly* to answer the questions we have propounded. They are direct and pertinent, and we shall be pleased to give the answers special prominence in the *Magazine*.

MASTER FRED DUPELL, something over 7 years of age, and the son of Frank Dupell, Esq., an attaché of the Grand Lodge, produced the following, a few mornings since, and all things considered, we give it place in the *Magazine* as a specimen of juvenile poetry equal to many we are requested to publish. The following is the production *verbatim et literatim* :

BY MASTER FRED DUPELL.

As I was standing alone,
I looked into my own dear home,
There stood my mother with my hat
And in it was our pussy cat,
She said to me come here my dear,
And see what I have got in here,
There it was the little thing,
It had my bird, too, by the wing.
I cried to mother, there's my bird,
But I don't think my mother heard.

The incidents upon which Fred's poem are founded were purely imaginary. There was no hat, pussy cat, nor bird. But the fancies are domestic and pretty, in fact, poetical, and if Master Fred keeps on in the line he has begun, the world may yet have another Tom Moore.

CHAS. J. SINGLETON.

Chas. W. Martin, the enterprising railroad editor of the Mattoon (Ills.) *Star*, has written for his excellent paper, a sketch of Bro. Chas. J. Singleton, who, though only 24 years of age, is an engineer on the Peoria, Decatur & Evansville R. R. and a master of his profession. Mr. Martin has embellished his sketch of Bro. Singleton with an excellent portrait of the man, which at once impresses the reader with the idea that he is a man of intellect and courage, one who possesses those qualities of head and heart which distinguish leaders and achieve success in the battles of life. Bro. Singleton is a native of Illinois, who early began his railroad career as a brakeman. He abandoned the brake for the pick and scoop, and rapidly advanced to the throttle, demonstrating that where there is a will there is a way to success. Mr. Martin, in giving the readers of the *Star* an outline of the history of Bro. Singleton, says:

His early years were spent in the school room, and at the age of sixteen he graduated with honors from Olney High School. He then entered the employ of the Ohio & Mississippi Railroad Company as brakeman, but at the end of two months resigned and came to this city, accepting a situation as fireman of the pony in the P. D. & E. yards. His advancement has been steady and sure, until to-day he handles the throttle with the grace and precision of a veteran, commanding the respect and confidence of his superiors by his unswerving attention to duty, and the good judgment displayed in all his acts, either as officer, servant, or man. His election as a member of the Grand Executive Board is the crowning honor of a long career of official service for his fellow-knights of the scoop and bell rope. Beacon Lodge, No. 111, of this city has recognized his fitness for service many times by electing him to many official positions; he at this time occupying the Master's chair. He is also a member of Circle Lodge, No. 707, A., F. &

A. Masons. For three years he was chairman of the General Grievance committee for the Mackey railway system, appearing before different officials in that capacity on five occasions within that time.

Such is a brief *resume* of Bro. Singleton's history, all the more creditable on account of his youth, because it becomes an example to the thousands of young men in the Firemen's Brotherhood, to work for advancement.

Bro. Singleton, as a member of the Grand Executive Board of the Brotherhood, will have opportunities for the display of his abilities, and that he will be of great benefit to the Order, none will doubt who know the superior qualities of his mind.

An exceedingly happy close of Mr. Martin's sketch of Bro. Singleton is found in the poem of Mrs. Henry B. Jones, editress of the B. of R. B. *Journal*, Washington, Ind. We should like to introduce the production entire, but must be content with producing the following stanza:

As member of the B. L. F.
They hold him very dear;
He's well deserving of the same,
This excellent financier.
The very first to help along
In any cause that's good;
He never leaves a stone unturned
To aid the Brotherhood.

THE *Railway Service Gazette* reports a case of "bad blood" occurring in the yards of the Cincinnati, Hamilton & Dayton R. R. when there was a strike of the switchmen, where two or three passenger conductors, who were members of the O. R. C., made their appearance to do the work of the strikers. There was at once a war of words, and the conductors were denounced in the most bitter terms, and threatened with violence. It is said that other passenger conductors who were not members of the Order, were requested to take the places of the strikers, but declined to do so. The Toledo strikers assert that it is the policy of members of the O. R. C. to take the places of strikers everywhere." The *Gazette* further says: "We now have a report from Los Angeles, Cal., that the conductors in the Southwest have become dissatisfied with the affairs of the Order of Railway Conductors, and have formed a new "Brotherhood of Conductors of the United States and Canada." One hundred conductors met December 9 at Los Angeles, and decided to form a grand division of the new brotherhood. It was also decided to send delegates immediately to all towns having division headquarters of railways west of the Missouri River, for the purpose of organizing subordinate divisions at these points." This fully confirms the predictions of this *Magazine*. Railway conductors as a body, are not hostile to other organizations of railway employes, and the action of the O. R. C. is producing legitimate fruits.

J. S. METCALF, Esq., has been advanced from Division Superintendent, to the responsible position of General Manager of the L. & N., in place of J. T. Harahan, who resigned. Mr. Metcalf is a worthy successor of Mr. Harahan and under his management the L. & N. will not suffer for lack of ability. A thorough railroad man, of large experience, he will not fail to maintain the prestige of the L. & N. system, now one of the most important in the country.

WM. PEACOCK, a member of Camden Lodge, No. 247, B. of R. B. in the *Brakemen's Journal* for January, discussing the subject of federation, refers to an interview with Chief Arthur, published in a Philadelphia paper and says:

It seems that the engineers do not want to federate unless they can have a representation in the chief body in proportion to their size with the other organizations of railroad employes. In other words, they want the controlling influence in the proposed new order of things by getting two representatives to the other brotherhoods' one, and, of course, relying on the firemen to act in conjunction with them. For instance, suppose, for convenience sake, we allow one representative to each organization and give the engineers their proportionate representation and allow them two. Now, with the firemen's representative, which they rely upon, and of course in all probability they will get, they will have a tie vote, with a good fighting chance of winning, and which, of course, gives them an advantage over all the rest. Now this looks to me like too much of a desire to dictate, a desire to boss matters and have things their own way; if it is not why do they want this extra representation? Why do they not come in on an equal footing? I am sure there are just as able men in the O. R. C., the B. R. B., the switchmen or the firemen as there are in the engineers, men who are just as well calculated to govern the destinies of those brotherhoods as any they may find among themselves.

Now my advice to the other organizations of railroad men would be to federate themselves and allow the engineers to have a little federation of their own and give them a chance to display some of their strength and ability in settling their own affairs, and perhaps they will make as big a success as they did with the C., B. & Q. business, which every one knows was a total failure. It is my opinion that if the other organizations will join hands it will be but a short time before they will extend us their right hand and say there are other organizations in this world besides theirs.

It should be distinctly understood that the orders which have determined to federate will do so, entirely regardless of what the engineers may do or may not do. And, peradventure, should the engineers ultimately conclude to federate, their order will not be given any preponderance in deciding questions. The federation plan contemplates equality and the rule of a majority, predicated upon equal representation. The interests engineers have at stake are no greater than the interests of any other brotherhood, and the only interest any order can have is to see justice prevail.

We are constantly in receipt of letters requesting the *Magazine* to take Master Mechanics, and other railroad officials to task

for alleged improper acts or words, which the writer deems of sufficient gravity to warrant great severity of criticism on the part of the *Magazine*. It occurs to us, that those who make such demands upon the *Magazine* totally misapprehend its mission. Such infelicities as are constantly being reported, affecting the relations of employer and employé, do not constitute what is usually known as a "grievance," worthy of calling together the grievance committee, that the facts may be correctly ascertained as the basis of further action, but are of that less important character, which involve only the few, without indicating a hostile policy, and as a result are not brought to the attention of those who are charged with the responsible duty of investigating wrongs to which employes are subjected. It ought not to require argument to show that the mission of the *Magazine* is not to enter such an arena for the purpose of assailing, right and left, officials, whose acts, or words, however well calculated to create estrangement, are not regarded of sufficient importance to constitute a "grievance."

It should be understood that the *Magazine* has all the courage required for a manly defense of locomotive firemen, members of the Order, where the facts and circumstances demands its championship, and this any one can readily see, who is willing to consult its pages. If, however, it was to take up every instance of misunderstanding which the Lodge to which the complaining member belongs, does not deem of sufficient importance to warrant the action of the grievance committee, the wrangle would become interminable, and we should have time for little else but to write castigating philippics against railroad officials—and being forever engaged in such chastising criticisms, the difference between a misunderstanding, incident to all human affairs, and a real grievance, involving rights and principles, would become obscured and the influence of the *Magazine* would be seriously marred if not totally destroyed, as a result, more harm than good would follow, and those for whose supposed benefit the scolding was volunteered, would, in all probability, be the ones most injured.

When wrongs are so flagrant as to create a sentiment throughout the Brotherhood that redress is demanded, it is not even then prudent for the *Magazine* to assail the parties who have inflicted the wrong, as such criticisms might greatly embarrass those who by arbitration are seeking to find a remedy for the grievance, but when such prudent measures fail, it is not required to remind the *Magazine* of its duty. On such occasions, the dignity (?) of the official will not save him from being stripped and flogged as he deserves. It is on such occasions that the *Magazine* knows it is right and will go ahead.

THE scabs, who took the places of the Indianapolis switchmen, at the time of the strike in November last, have fared badly. The Indianapolis *Labor Signal* of December 15th says "that no less than twenty-two of the scab switchmen employed in the yards of this city since the strike of union men some weeks ago, have been either killed or maimed for life. The fatal accidents have all been chronicled in the daily press, but every effort has been made to conceal the others. As these accidents were the result of incompetence on the part of those injured, the railroad officials' secrecy is apparent. They do not wish the riding public to know that thousands of lives are daily placed in the care of inexperienced employes in order to save the road a few dollars." Federation is the only remedy for such a condition of things and the sooner it is perfected the better it will be for the public, for employes and for the railroads.

THE phenomenal growth of the circulation of the New York *World* under its present management, excites universal surprise—almost justifying the remark that it is miraculous. New York had newspapers before the *World* was born, newspapers of high standing and great wealth. The *World* for a number of years, did not cause them any solicitude. It simply lived. But under its present proprietorship and management, it suddenly strode to the front of all newspapers in the United States, and in point of circulation, probably stands first of all the newspapers of the world. Why this growth? The question is easily answered. The world moves, and the New York *World* keeps up with the procession, in fact, in many regards, leads it. It is in every sense, and in the best and broadest sense, a newspaper. That is reason enough. The New York *World* is a most welcome visitor to our table. To read it, is to have the news.

△ COMMENTING upon "federation," the *Locomotive Engineer*, in the January issue, says:

The Engineers' Brotherhood, at their recent convention in Richmond, declined to accept any of the plans of federation proposed. After mature deliberation we are of the opinion that this is best. The railroad orders should adopt rules of non-interference in case of trouble, but it would be a herculean feat to unite all the interests and keep them united. The Engineers' and Firemen's Brotherhoods have interests that are identical, yet the engineers have been unduly jealous, and distrustful of their juniors. The late trouble on the C. B. & Q. has proven that these fears were entirely groundless. When the engineers meet next year at Denver, we hope to see some of the men who have been talking and wringing about "the twin brotherhoods" get up and offer an amendment to the constitution, abolishing that close-communion, barbarian clause requiring a young engineer to withdraw from the Firemen's Brotherhood before he can join the engineers. This might be federation and it might not—it would be right, anyway.

After "mature deliberation" we are un-

able to detect anything approximating the "herculean" in the "feat" of federation. It is neither difficult nor dangerous. It is a simple proposition, to be set in operation by simple methods. In fact not to federate, or, as the *Locomotive Engineer* states it, to "adopt rules of non-interference" is the more difficult task. Analyzed, non-interference means this: if the engineers on any road have a grievance, all the other railroad Orders are to keep hands off. The corporation would at once put scabs in the cabs and all the other employes would work with them without protest, and the grievance would go unredressed, and so with every other Order. This is what the B. of L. E. calls "strict neutrality," total indifference, a total disregard of wrongs inflicted, and in every case giving the victory to the wrong. Non-interference is just what a railroad corporation wants, when it proposes, like the C. B. & Q., to perpetrate a wrong. For the various Orders to "adopt rules of non-interference" would be superfluous. All the Orders have to do, is to do nothing—be "strictly neutral," and for this, the rule would be, let the corporation have its own way. Let wrongs multiply, let them eat like cancers, or rust, or vitriol. Instead of "Federation"—united harmonious action—let the banners of labor float inscribed with the motto, "Non-interference," and their doom is irrevocably sealed. Having determined not to help themselves, labor organizations need not expect that God will help them for it is proverbial that He helps only those who, at least try, to help themselves.

We can conceive of no proposition more *outré* than railroad organizations adopting rules of non-interference when a flagrant wrong has been inflicted. The operation involves the herculean feat of swallowing one's self, and in case of railroad Orders, except perhaps the O. R. C., the deglutition performance is well calculated to excite the admiration of such corporations as devoutly pray for the extinction of the various Orders of railroad employes, and if they can't get that the next best thing for them would be "non-interference."

But turning from the discussion of such topics, we desire to express our gratification in view of the noble and generous words of the *Locomotive Engineer* relating to the "barbarian clause" in the constitution of the B. L. E., "requiring a young engineer to withdraw from the firemen's Brotherhood before he can join the engineers." They are brave words, fitly spoken, and cannot fail of having a salutary influence. But let it be understood that the B. of L. E., in this matter, will be permitted to work out its own destiny without further overtures from the B. of L. F. Brotherhood firemen are not ingrates nor apostates, and this, we assume, the B. of L. E. will ascertain in due time.

PASSUMPSIC Division, B. of L. E., and Green Mountain Lodge, No. 301 B. of L. E., Lyndonville, Vt., were recently made the recipients of a handsome French clock, the generous donor being Mr. Geo. W. Burgess. Mr. P. D. Hoey, acting for Mr. Burgess, made a happy presentation address, which was responded to on behalf of the engineers by Mr. I. B. Hutchinson, and on behalf of the firemen by Bro. Wm. M. Weeks, Receiver of No. 301. Following the presentation and the felicitous addresses, a vote of thanks was given to Mr. Burgess for his kind remembrance of the Brotherhoods and for his beautiful and valuable gift.

It may be interesting to many of our readers to know that fully one-fifth of the Chicago, Burlington & Quincy stock has been transferred from Boston to New York in the last three months, and the holdings of the Atchison, Topeka & Santa Fe in about the same proportion. It is likely that New York will soon have something to say about controlling the boards of directors of these two heretofore considered Boston interests. It is quite likely that the New York capitalists will introduce a policy in the management of these roads which will recognize the justice and propriety of employing competent men at fair prices and the dismissal of scabs.

THE news has been wired over the continent, that Mrs. Jay Gould is dead. She was not only the wife of a millionaire, but possessed a large fortune in her own right. Columns will be written of Mrs. Gould, not because she was a good and pure woman, and loved her home and children supremely, but because she was the wife of a man, who being possessed of great wealth, exerted great influence in business affairs. It is said of Mrs. Gould, that she was pre-eminently domestic—and regarded what is called "society" in New York, with aversion. She had diamonds, but she would not wear them in public. She was opposed to display—to ostentation, to the despotical edicts of fashion, and would not worship at the shrine of the fickle goddess. She was never more content than when at her palatial home on Fifth Avenue, New York, or at her country seat, Irvington, on the Hudson. It is said of her that she was charitable, in a quiet way, not permitting the world to know, how, where or when she helped the unfortunate. Many harsh things have been said of Jay Gould. Upon few heads have the storms of detraction beat fiercer. But it is said, and nowhere contradicted, that he devotedly loved his wife and children, and when possible always spent his evenings at home. Hence, the question arises, can a man be very bad, who loves his wife—is devoted to her and to his children, and

spends his evenings at home? Mrs. Gould will sleep her last sleep in a mausoleum costing \$100,000, built after the style of the Temple of Theseus, at Athens. It is large enough to hold the whole Gould dynasty for many generations. Such things money can buy—the poor must be content with a hole in the ground, and for their monument, something less ostentatious than pagan mausoleums, pillared and domed, like the palaces of kings; indeed, a grassy mound answers every purpose, and when some loving hand plants a flower upon the turf above them, it may be, after all, more beautiful in the eyes of angels and people of common sense than the weak attempts of the rich to be fashionable and the leaders of the town when dead.

A JUDGMENT against a railroad was recently rendered at Indianapolis, by William P. Fishback, master in chancery. The suit was in the Federal court and was entitled the Central Trust Company of New York vs. the Wabash, St. Louis & Pacific railway company, and Mrs. Bertha Pettit, of Ft. Wayne, Ind., was given \$6,000 damages. It appears that on the 9th of January, 1888, Mrs. Pettit was travelling on the Wabash road, going from Ft. Wayne to Effingham, Ill. Near West Lebanon there was a collision with a freight train. Mrs. Pettit was thrown against the car door and received injuries which will render her an invalid for the rest of her life. All such cases should impress railroad officials with the supreme importance of employing competent men, such as the various Brotherhoods of railroad employes are endeavoring to furnish them, instead of scabs whose record is one of continuous disasters.

WE have received *Scribner's Magazine* for January, containing General E. P. Alexander's article on "Railroad Management," elaborately illustrated from drawings by a number of qualified artists and engraved with great fidelity. The writer reminds his readers that "the life of a railroad corporation is perpetual, its powers limited, and its individuality constantly changing." The general further says of the corporation, "that it is but an artificial individual existing for certain purposes only, and, as it lacks some human qualities, all its methods of doing business are influenced thereby." The article by General Alexander, from whatever point considered, is one of the best of the series published by the Scribners. It is full of information which the general reader will find of great interest. Every line shows that the writer is "posted" and capable of imparting knowledge. We are informed that the railway series of articles will be continued during 1889.

For the Magazine.

THE WEATHER.

I have read of sunny climes, in poetry and rhymes,

And have envied the wild goose as he flew,
From Northern frozen zones, to where the monks
have their homes,
And are strangers to the "snew, friz and thew."

I have read writers whose topics were about the climates of the tropics

Where grow the orange, the fig and the banana,

But I very much doubt whether they ever saw such weather

As just now is the pride of Indiana.

Indeed, I'll bet my bottom dollar that no wild goose, crane or swallow,

In their migrating tours to build a nest,
Anywhere found such weather, so delightful altogether,

As now blesses this country east and west.

Cy. Clone.

A WRITER in the New York *Dispatch* says:

The dissatisfaction among the members of the B. L. F. seems to be widespread, in consequence of the fact that the B. L. E. took no action at the last convention in regard to a closer union with the B. L. F. The matter is of enough importance to call for a few remarks, and these are given to be read and considered by one who has the interest of both organizations at heart, and looks at the matter calmly after hearing both sides of the question from men who are mutually competent to speak intelligently upon the subject. As Masonry has many followers among engineers and firemen, it will be taken as a means of illustrating the matter.

The writer refers to the fact that the B. of L. E. refused to federate with any of the railroad Orders. There is nothing in the proceeding like Masonry any more than there is like Mahomedism. When the C., B. & Q. troubles began, engineers very promptly conceded, (to carry out the *Dispatch* writer's idea), that all the firemen were Master Masons. Then coöperation, federation, fraternization, anything and everything in the line of unity and harmony was in order, and suddenly the announcement was made that the B. of L. E. and the B. of L. F. were the "twin brotherhoods." There were chestnuts to be pulled out of the fire, and *gush* was in order. But at Richmond, the engineers concluded that federation was beneath their dignity and proceeded to give firemen the grand bounce, and to reconcile firemen to the *shake* the *Dispatch* writer proceeds to detail with great minuteness the processes by which an applicant is made a Master Mason. The description is graphic. It could be scarcely more so if the poor applicant was in course of preparation to be hung or beheaded. It is a desperate effort to exculpate the engineers. It reads like a contract to whitewash the B. of L. E. But we cannot refrain from giving the conclusion of the article. It is climactic. The writer did not intend to be humorous, but he is, all the same. Here it is:

To those who are not of the craft it can be said that while the two brotherhoods are as one in all matters, there is a distinction—a third degree.

No matter how good a man he may be; no matter how well he can run and handle an engine in every way, until he is given an engine of his own, until he has been raised and appointed to the place and pay of engineer, he is only a fireman, the one who is under the orders of the engineer; the one who has had all but the third degree. And when he has gone up this one step higher and stands superior to the man in whose place he formerly was, then will he see the difference, and at once realize that he has assumed great responsibilities, and has taken the third degree. Brothers of the craft, is not this so? And you, brothers of the B. L. F., can't you realize now that when you rise to command the members of the B. L. F. by the force and dignity of your position as sole handlers of the throttle, there is a difference in the position of the fireman and the engineer? Think for a moment, and reflect, and then decide.

Boiled down, the foregoing means that when the engineers get into another C., B. & Q. trouble, and want the firemen to help them the firemen are to respond, "we haven't got the third degree yet, and until we rise to that sublime altitude, you will have to go it alone."

We have on our table the January number of the *Brakemen's Journal*, No. 1, Vol. 6, and find its contents of more than usual interest. The editorial article captioned "One John Livingston," is in Editor O'Shea's happiest vein, and while eminently diplomatic and parliamentary, is not the less scathing, and without regard to what Mr. John Livingston may think about it, the readers of the article generally, will be unanimous in their verdict that the said Livingston is a most artistically flayed whelp. The said Livingston is totally unfitted by virtue of his vicious instincts to be president of an association of prairie dogs, and his mean attack upon the Brotherhood of Railway Brakemen and other organizations of railroad employes, designates him as a venomous blatherskite, as repulsive as a dungeon toad. The day has gone by for such men as John Livingston, no matter what may be their position, to arrest the march of working men in their organized and federated power, to exact and secure justice at the hands of their employers, and nothing more is demanded. We felicitate Bro. O'Shea upon the masterful handling of his whip, and the way he has decorated Mr. John Livingston's cuticle with stripes and welts ought to secure him an engagement in Barnum's show. This is one of a class of men who should be scourged with whips of fire, for they are simply a gang of blind, malignant enemies of men whose only capital is their skill and toil, and who carry forward all the great enterprises of the age, asking only for fair, honest wages.

The *Brakemen's Journal* begins its career for 1889, with every evidence of success, and withal has a cover which is a thing of beauty and makes a most agreeable impression at the first glance. We wish our contemporary the largest possible success.

REPORTS have it that of the ten leading railroad stocks largely handled in Boston there has been a shrinkage in values in the last twelve months of \$107,943,263. The largest shrinkage is shown in the Atchison, Topeka & Santa Fé, and the Chicago, Burlington & Quincy comes next. That Boston capitalists have been able to stand such a shrinkage without serious financial wrecks is a matter over which the Boston press is boastful. The fact is that almost the entire shrinkage is confined to the two systems named, both of which seek to grow rich by reducing the pay of employes.

ON the first day of November last the engineers and firemen in the employ of the Central Railroad and Banking Company of Georgia, arrived at an amicable adjustment of grievances and entered into a contract with the company for one year from the date named. Bro. J. I. Davidson, Chairman of the Firemen's Committee is deserving of great credit for the method and manner in conducting the settlement. All firemen and helpers hereafter employed on the road are to be *white men*, manifestly the result of the action of the Brotherhood at its Biennial Convention held in Atlanta in September last.

WE have received from the Editor, J. A. Hill, Esq., a handsomely bound volume of the *Locomotive Engineer* for 1888. Since the first issue of Mr. Hill's excellent paper, we have been a close student of its pages in which, from first to last, there has been a large amount of valuable reading eminently suited to aid the locomotive engineer and fireman to master the problems of their callings. Presuming that bound volumes of the paper can be had upon application we do our readers a favor by suggesting to them the importance of having the volume on hand for reading and for reference. The investment will pay large dividends in solid knowledge.

MR. CHARLES F. MAYER, who represents the Garrett interest in the B. & O., was elected President of the road in December last. It is said that President Mayer's "first mark was made as President of the Despard Coal Company. In 1877 he was elected, and is now President of the Consolidation Coal Company, which is credited with making a larger annual output of bituminous coal than any other company in the country. Mr. Mayer is also President of the Cumberland & Pennsylvania Railroad Company and of the Susquehanna & Tide-Water Canal Company." He is now at the head of one of the great railroad systems of the country, and has a splendid opportunity to distinguish himself as a railroad king.

AT an auction sale of stocks and bonds belonging to the late Joshua Jones of this city, 354 shares in the Pennsylvania coal company of a par value of \$50, sold for \$291 each; and 100 shares in the Singer manufacturing company, par value \$100, were disposed of at \$301 each. Once in a while the veil is lifted from some of our great protected monopolies, and we get an idea of what we really have done for them in taxing ourselves for their benefit.—*N. Y. Standard*.

It appears that on November 8th, a depraved scab engineer of the C., B. & Q., murdered, in cold blood, H. E. Hall, a switchman, at Creston, Iowa. The *Independent American*, published at Creston, denounces the deed as "cold-blooded butchery." That is the size of it, we think. The *Independent* further says that the man who sent a dispatch from Creston extenuating the crime, "is one degree beneath the lowest devil that inhabits the infernal regions." Notwithstanding all this, Abraham Lincoln Assembly, K. of L., said: "Whereas, it has pleased the Father of the Universe to remove," etc., therefore, "resolved, that the wilful and atrocious murder of Bro. Ed. Hall," etc. Creston Lodge of the Switchmen's Association declares that Mr. Hall was "killed at the hands of a scoundrel," but resolved to "bow in humble submission to God's will." Is it not about time for labor organizations to relieve God Almighty of all responsibility in such cases?

WE have before us the *Switchmen's Journal* for December, and note what it says about the strike of the switchmen at Indianapolis, in November last. The strike was a failure, and we refer to it again that our readers may have the facts as stated in the *Journal*. It appears that as early as September 12, a petition was signed by the switchmen "for an increase of pay, shorter hours, and additional men with each engine." This petition was sent to the railroad officials. "The scale of wages requested was the same as that paid in Chicago, St. Louis, Kansas City, Cairo, and many other points, viz.: Day foreman, \$70 a month; helpers, \$65; night foreman, \$75; helpers, \$70; twenty-six days of ten hours each to constitute a month's work; each additional day or fraction thereof to be paid in proportion to the foregoing scale." Having the exact facts our readers can form an honest judgment. Who will say the demands of the switchmen were unjust? Who will offer an apology for the action of the railroad officials for refusing to listen to committees and for declining to arbitrate? Who does not see, if federation had been perfected, that simple justice would have been done?

BLACK DIAMONDS.

It is not surprising, seeing they have their pick, that firemen always marry pretty girls.

A bull headed cow boy applied to President Depew for the position of conductor on a milk train.

A saloon at Burlington, extensively patronized by scab engineers, is called the "Open Throttle."

Paul Morton has his large establishment for the manufacture of concentrated lie guarded by the Pinkertons.

"Lack culture? Possibly," replied the fireman, "but when it comes to polish I keep up with the procession."

THE *Union Pacific Employee's Magazine* for December, devotes considerable space to the discussion of affairs on the Santa Fé. The statement is that the road has become financially embarrassed and hopes to regain its footing by reducing the pay of its employees, the reduction to fall upon those who are the poorest paid. The Santa Fé, it appears, relies chiefly upon the reduction of wages to overcome losses by mismanagement, and some months ago reduced the pay of its section hands from \$1.25 to \$1.00 a day. At \$1.25 a day the men could barely live, at \$1.00 a day suffering became inevitable. The second movement, to enable the great Santa Fé company to do business, is to reduce the wages of all employees 10 per cent.; but certain classes, engineers and firemen, were requested to vote on the proposition to submit to a reduction, other classes had to come down *volens volens*. To make the proposition specially ridiculous, to place hypocrisy beyond the reach of hyperbole, the president of the company comes forward with the proposition to reduce his own salary 25 per cent. In this there is food for reflection. It is safe to say the president of the Santa Fé receives \$25,000 a year. But suppose it is \$20,000 or \$15,000 or as low as \$10,000, what would be the result? It is worth tabulating:

At \$25,000, 25 per cent. off, \$6,250, remaining \$18,750
 At \$20,000, 25 per cent. off, \$5,000, remaining \$15,000
 At \$15,000, 25 per cent. off, \$3,750, remaining \$11,250
 At \$10,000, 25 per cent. off, \$2,500, remaining \$7,500

It will be observed that after the president of the Santa Fé has made his reduction of 25 per cent., the remainder of his year's salary is a little fortune. At the lowest figure he receives, counting 300 days for a year, at the rate of \$25 a day, or \$650 a month. Compare such figures with the pay of employees and the climax of irony is reached. The president, at the lowest figures, has enough, while many of his employees at the highest figures are but poorly paid, and to reduce their pay 10 per cent. or any other per cent.

is refined cruelty. The *U. P. Magazine* well says, "There is no business or industry of any kind but what can pay its workmen fair living wages; if it cannot do that it should give way for something that will; it should stop." But it should be remembered that the scabs are numerous, and that their mission is to degrade labor and to defeat labor organizations in their efforts to obtain "fair living wages." To defeat scabs and the corporations which employ scabs, federation becomes a necessity.

Among the late inventions patented, says the *Scientific American*, is that of Daniel B. Davis for coupling cars. This invention provides a means of coupling cars without passing between them, also for elevating the drawhead or adjusting it laterally, and for sustaining the coupling-pin in an elevated position when the cars are uncoupled. Another is an automatic car brake, by Willard D. Wood, Jr. A gear wheel is secured to one of the axles, with which a segmental gear wheel is adapted for engagement, yielding bearings carrying the segmental gear wheel, and a double wedge engaging the yielding bearings, and operated from the brake staffs so as to move the segmental gear wheel into and out of mesh with the wheel on the axle. Henry Leslie has patented a railway switch. The switch is pivoted and consists of pointed rails and suitable cross pieces, with an arm having slots and a projection in combination with a connecting rod, whereby either switch frame may be operated independently of the other by the same lever, or both switch frames may be operated simultaneously in opposite directions.

THE statement is going the rounds that the Central Vermont has not settled all of the claims growing out of the disaster February 5, 1887, yet. At that time thirty were killed and thirty-six injured. Something over half of these cases have been settled, but not a suit has been tried. The Bussey bridge accident, where twenty-three were killed and one hundred injured, cost nearly \$1,000,000. The Vermont laws are much more favorable to the Central Vermont than are the Massachusetts laws. Here \$5,000 is paid in case of death. If in such lessons of experience railway corporations are not taught the supreme importance of employing only competent, reliable men to run their trains, then it must be confessed that their greed completely obscures the judgment of officials. We do not assume that accidents do not occur when competent men are in charge, but we do assume that with competent men, honestly paid, and not overtasked, accidents are reduced to the minimum, and that the policy is big money in the pockets of such corporations.

Railway Life, published at Toronto, speaks encouragingly of the completion of railroad extension to Hudson Bay. The distance from North Bay on the C. P. R. to Hudson Bay, is about 350 miles, and the completion of the road would open up a country of great richness. *The Life* says:

The country through which it passes is known to be excellent farming land. It is less elevated than some of the country south of it, and therefore the temperature is higher, considering the latitude. Nearly all the cultivated crops of Canadian fields and gardens will grow there. In minerals it is known that the country is quite rich, while its lumbering wealth is all but incalculable. Following the well-established natural law that all vegetables attain their greatest perfection nearest the northern limit of their production, the white pine north of Lake Nipissing is the best that Canada ever had. There are large tracts of it as yet untouched by the axe or the fire. As well as the pine there is spruce in incalculable quantities, and, as spruce land can be cut over once every fifteen years, there will be permanent business for the road, the more especially as spruce must, in the not distant future, take to some extent the place of the fast disappearing pine. Then, again, the paper-making industry, or at least the pulp-making part of it, will have to emigrate among the poplars, of which there are unnumbered millions in the country north of and around Lake Nipissing.

The Hudson Bay country, of British America, is almost as much of a *terra incognita* as the center of Africa. We are now told of its immense resources, and the railroad will soon be transporting them to the markets of the world.

WE make no apology for the frequent reference to federation in the *Magazine*. It is just now, the question of questions. It is up for debate in the Lodges of all the Brotherhoods of railway employes and is discussed in all the organs of the orders, except, perhaps, the organ of the B. of L. E. That organ wisely keeps silent, because should it attempt to vindicate the course the B. of L. E. has chosen to pursue, the animus of its position would at once be disclosed to its discomfiture. A correspondent of the *Union Pacific Employes' Magazine*, refers to the action of the Brotherhood of Engineers at its Richmond convention, or rather, the non-action, in the matter of federation, which is characterized as "one of the most important measures before that honorable body," and adds:

For at the present time without the support of federated orders it would be next to impossible for them to sustain any measures they might wish to carry out or enforce against the wishes of a corporation; and should they become involved in any cause which did affect any of the federated orders, I do not see how they could stand, for cannot their ranks be successfully filled from the Brotherhood of Locomotive Firemen, the Knights of Labor, etc. Do they not remember that they were all, or nearly all, firemen before they were given an engine to run? Are there not more firemen now than ever before? If there were no federated orders they would then have no united force to contend with, and they might then meet the enemy single handed and come off victorious, but they should bear in mind, that, "A house divided against itself cannot stand." I do not think they hit one order harder than another, but refused or neglected all

alike. The Brotherhood of Locomotive Engineers are making the same mistake made by the Telegraph Operators' Union a few years since, when they refused or neglected to take in railroad operators, claiming that they were incompetent to fill the places of commercial men, but they were put to the test and they proved equal to the emergency and the result was disastrous to the union.

The almost universal sentiment is that the B. of L. E. made a mistake at Richmond. Be this as it may, it relates solely to the B. of L. E. and will not interfere with the work of federation by other organizations.

THE New York *Dispatch*, under the caption of "Bad and Good Luck," has the following:

Charles Marley, a fireman on the N. Y., N. H. & H. R. R., joined the B. of L. E. on the 24th of September last. On October 8th, fourteen days later, while with his engine in New Haven, Conn., he crossed over by the back of the tender and was struck and crushed by a New England switch engine, and the consequence was his right arm had to be amputated. On December 31st a draft for \$1,500 was forwarded to the Secretary of Marley's Division, B. of L. E., which was handed him, on account of his injuries.

The Master Mechanic of the N. Y., N. H. & H. R. R. has sent word that he has a first-rate position waiting for Marley, which he can take as soon as he is able. The \$1,500 draft is a splendid answer to the question, "Does it pay a fireman to join the B. of L. E.?"

In many ways it pays a fireman to join the B. of L. E. Membership in the Brotherhood not only gives security against sudden misfortune, such as befell Bro. Marley, but membership surrounds the fireman with many social and fraternal enjoyments not otherwise obtainable. Besides, membership in the Order is fruitful of healthy restraints of incalculable value to men who would resist temptation and achieve success.

An associated press telegram from Cedar Rapids, Iowa, Dec. 19th, said that "the chief officers of the Order of Railroad Conductors, located here, deny the report from Los Angeles, Cal., that the association west of the Missouri river has disbanded, and say that only two local points are affected, and that there is no indication of any further disaffection. They claim that the new Order is organized to affiliate with striking organizations, and that as soon as conductors learn the nature of it they will have nothing to do with it." The contradiction of the "chief officers" is significant. The O. R. C., as it now exists, may suit a great many of its members, may be very popular with the whole tribe of C., B. & Q.'s, but it is not the friend of working men when unjustly treated. It has no sympathy for them. It doesn't view such struggles with "strict neutrality," but favors scabbing to maintain its position of a parasitic organization. It is not surprising that a "new Order of Railway Conductors" is being organized for more honorable purposes.

EXCESSIVE HOURS OF SERVICE

Time and again this *Magazine* has called attention to the fact that excessive hours of labor must be, in the nature of things, fruitful of disaster. In the March number of the *Magazine* in discussing the terrible accident on the Pennsylvania R. R., February 18, 1886, we said:

"Physical endurance is one thing, mental endurance is quite another and a far more important matter. The mind to be watchful and on the alert must not be overtasked. Engineers, firemen, brakemen, conductors, switchmen, train dispatchers and signal operators are, if trustworthy, more or less constantly subjected to mental strain as the result of responsibilities. To require them to work an improper number of hours, has resulted in disasters in the past, and railroad officials cannot do themselves and the public a greater favor, a more desirable service, than to investigate questions relating to the number of hours those of their employes ought to work, who have the lives of passengers in their custody."

In a recent issue of the *American Machinist* we notice an article captioned "Excessive hours of Service on Railroads" as follows:

There have been numerous instances in which serious wrecks and loss of life have resulted from working train crews an unreasonable length of time without opportunity for rest. Not long ago we noted the occurrence of such an accident in England, which resulted in the issuing of an order limiting the number of hours of continuous service to something like a reasonable length of time. The necessity for some limitation of the kind has been again shown, by the collision of a freight and passenger train on the Metropolitan branch of the Baltimore & Ohio Railroad, and the consequent killing of three trainmen and the wounding of several others. The men in charge of the freight train state that they had orders to lie on the switch at Tuscarora and wait for two sections of the Pittsburgh express and the Cincinnati & St. Louis express to pass. After the first section of the first train passed, they, having been on duty *thirty-six hours*, went to sleep to secure a little rest. Awakening as the second section of the first train passed, they mistook it for the second train, as it was running on that train's time. They consequently pulled out onto the main track, with the result as above stated. We repeat what in substance we have said before, viz: that trainmen, especially engineers running on single track roads, must have every facility in active employment continuously during a run, and to expect men to do this for thirty-six hours without rest, is to expect impossibilities and to invite disaster. Stringent laws should be passed against the practice, far too prevalent, of requiring such unreasonable hours, and severe penalties should be inflicted for its infraction.

We are pleased to note the fact that the position taken by this *Magazine* is at last attracting deserved attention, and it is to be hoped that the time is close at hand, when overwork by railroad employes will be among the things of the past.

THE *New York Times* in the wealth of its generosity is moved to say that a large proportion of our workingmen are entirely ca-

pable of understanding the questions and principles involved in their cause, and then proceeds to advise workmen to convert their organizations into educational institutions, remarking, that their great defect "has been a lack of knowledge and of understanding of the principles which underlie the relations of labor to capital, to society, and to government." "Excellent advice," says the *New York Standard*, and adds: "But why should the *Times* proffer it to workmen exclusively. Other men besides workmen have organizations, which one would think might profitably be made to do a little educational work in the direction suggested by the *Times*. Or does the *Times* think that our merchants, and bankers and brokers, and manufactures, and trust managers and clergymen, and editors, and Sunday school superintendents have no "lack of knowledge and of understanding of the principles which underlie the relations of labor to capital, to society, and to government." If it does, it is woefully mistaken. There is more of that kind of knowledge among workmen than any other class." The *Standard's* opinion upon such matters is worth as much as that of any publication in the country, and it correctly speaks of the intelligence of workmen. Besides, the organizations of workmen are largely educational and are yearly becoming more so.

The relations of labor to capital, to society and to government are being taught in all the labor organizations of the country. The relation of labor to capital is that of creator to the thing created. Labor creates capital—without labor there would be no capital. In the near future, labor proposes to have more nearly its equitable share of the capital it creates; and bankers, brokers, manufacturers, corporations, trusts and monopolists, may as well begin to understand the fact. What society most needs to-day is to understand that labor makes it progressive, and that without labor, society would lapse into barbarism. And as for the relations of labor to government, it should be understood that labor pays all the revenues, and that without labor there would be a universal "decline and fall of governments."

Labor organizations are preparing to solve problems relating to relations; and that conditions as they now stand will be changed at no distant day is a foregone conclusion.

OWING to the fact that an "interlocking switch failed to work," the Grand Rapids express train was derailed and the engine turned over into the ditch. The accident occurred seventeen miles west of Michigan City, Ind., at the B. & O. crossing, and strange to say, Engineer James Cassidy, an old and highly-respected citizen of Michigan City, was the only person injured and he was killed outright.

THE *Locomotive Engineer*, discusses "What we ought to do" in a way that should awaken interest, and be productive of action. It says that railroad clubs are being formed all over the country for the discussion of railroad questions. Manifestly, engineers and firemen should attend such club meetings, and will lose ground if they do not avail themselves of such educating help. The *Locomotive Engineer* further remarks that "the railroad labor organizations cannot hope to offer real, lasting inducements to railroads for the exclusive employment of their members, unless some feature is introduced that will say to the companies: "We can furnish you better posted, more temperate, and more experienced men than you can get outside; our lodge rooms are furnished with books, models of valve motions and brake devices that are in themselves educational and a safeguard; we hold regular meetings to discuss operative railroad topics, in which every member must take part—invaluable advantages that can be obtained in no other way." In the absence of the railroad club, such as that to which the *Engineer* refers, it should be remembered that the lodge room could easily be made a club room and a school room for various educational purposes, and such a movement would be in the highest degree creditable to the brotherhoods of railroad employes. It would afford this *Magazine* special satisfaction to know that the Lodge rooms of brotherhood firemen had become school rooms and lecture rooms, with books and appliances calculated to make firemen, as the old Babylonian king said, "skillful in wisdom and cunning in knowledge."

A CORRESPONDENT in the December number of the *Journal*, the organ of the B. of L. E. very justly says that "all labor that is honest is honorable," and that "the noblest thing in this world is labor." We assume that the writer (Div. 287) is a member of the B. of L. E., notwithstanding which, we further assume that he regards the work done by switchmen and brakemen as "honest and honorable," and therefore the "noblest thing in this world." The writer must know that the work of switchmen and brakemen is just as "honest and honorable," and as noble as the work done by engineers. The writer must know that switchmen and brakemen have grievances against employers as just as any of which engineers ever complained; he must know that there would be no use for engineers if there were no switchmen and brakemen, and knowing these things it would be interesting to know what he thinks of the action of the Richmond convention of his Order, which resolved to let switchmen and brakemen severely alone when they had grievances to settle with their employers, and pursue towards them

a policy of "strict neutrality," of total indifference. "Honest, honorable work" is pursued by "honest honorable" workmen still the Locomotive Engineers will neither cooperate nor federate with switchmen and brakemen. It takes no interest whatever in any wrongs employers may inflict upon them. The B. of L. E. will cooperate with locomotive firemen, but it won't federate with them, and esteems its organization so immaculate that no engineer, a member of the B. of L. E. can be eligible to membership in the B. of L. E. until he apostasizes. "In the name of all the gods at once, upon what meats doth this our Cæsar feed, that he has grown so great."

WE notice going the rounds of the papers the following from an article of Prof. David Swing, which appeared in the *Chicago Evening Journal*.

The educational power of the railway is kept back by the pitiable truth that many of its officials are not students of a great art, but are only speculators in land or stocks, when not absolute thieves. Many a superintendent is only an Ives in a smaller way. Quack railroad men are more numerous than quack doctors. Good men are discharged to make room for favorites, and thus fortunes and life are placed at the mercy of untrained idiots. In the army a colonel was displaced that some cousin of the general's might have the position. When the new colonel rode out to exercise the boys at arms he told them "to do as they had done yesterday."

It is not creditable to the railroad management of the country that such things can be said by a man like Prof. Swing, without meeting with a prompt and emphatic denial. We do not accept Prof. Swing's estimate as applicable except in a limited number of cases, but that they are too true in far too many instances is not questioned and it goes without saying that railroads cursed by such management as the learned professor outlines are everywhere and at all seasons, death traps, equipped not only for financial ruin of stockholders, but for disasters which create a demand for cemetery real estate and increase the business of coroners and funeral directors. When officials, such as Prof. Swing refer to, have control of railroads, employes suffer. The misapplication of revenues inevitably leads to bankruptcy and the cutting down of wages is certain to follow, and hence it follows that employes have vital interests always at stake in the management of railroads and in the competency and honesty of officials. When a superintendent "is only an Ives in a smaller way," or in the same way, or any way, working men suffer without the power of redress.

THE state of Connecticut, once known as the "Nutmeg state," now has the right to be known as the "Brassworker's state," as fully fifty thousand persons are employed in that branch of business.

THE editor of the Chicago *Knights of Labor* has determined, so far as he is concerned, to maintain the unalienable right of free speech and says, "We may be expelled, but we can't be gagged."

Railway Life, referring to the statement that train despatchers must work for wages as low as \$45 a month, says:

This is not what the ability, faithfulness and hard work of a despatcher ought to command. There is danger that, in scaling down wages, the ability of the men and their interest in their work may be scaled down as well. The public should hold railway managers strictly to account for error or neglect in the despatcher's office, for, wherever else cheese-paring may be allowed, the man at the despatcher's desk holds too many lives and too much property in the hollow of his hand for any but the very best talent that money can hire to be permitted to engage in the work.

The public does not and never did hold railway managers strictly to account for anything in the way of a wrong done to employes. There is not one instance of the kind on record—on the contrary, just the opposite will be found to be true without an exception. Let a flagrant wrong be perpetrated on employes, and with rare exceptions the press of the country takes the side of the corporation, and though in the case of a half-paid and overworked telegraph despatcher, a wreck may be caused with fearful loss of life, no corporation was ever held responsible. The public in such cases does not amount to a pinch of snuff.

THE recent convention of the Knights of Labor at Indianapolis, and the reelection of Mr. Powderly, as Grand Master Workman, have supplied the press of the country with abundant matter for comment. The *St. Paul Globe* remarks that: "It is a reflection upon the organization itself to assume that there is but one man within its ranks of sufficient administrative ability to shape its policy. An organization that is wholly dependent upon the power and ability of one man to create for it a field of usefulness must, of necessity, be short lived." Every organization requires a head, a chief. There may be a dozen or a score of men qualified for the position, but only one can occupy the place. The Knights of Labor by reflecting Mr. Powderly, furnished no just reason for the assumption that the organization is "wholly dependent upon one man" for anything. The delegates did nothing more than other organizations frequently do, in reflecting Mr. Powderly. They simply indorsed his policy, his administrative ability, his integrity. If things had gone wrong they did not hold Mr. Powderly responsible, but gave him another opportunity to correct errors, with ample powers to test his capabilities. The time will come for passing judgment, but just now, anything in that line, is premature.

THE *New York Dispatch* discussing "organized striking," says:

Organizations whose banding together is only to secure that last resort, "organized striking," might learn a lesson from the Order of Railway Conductors, the one organized body of men who can't strike. Conductors as a rule are paid more money for their work than skilled laborers, and have easier times and a more interesting business. With conductors, there is no grabbing of the throat, with the threat, "Do this, or we'll strike," but instead, a respectful request is sent to the officials, and nine times out of ten, successfully, and yet if the request were refused, what would be the consequence? Why, the conductors, if they did not like it, would have to "lump" it, and still the O. R. C. has accomplished wonders.

The *Dispatch* should by all means point out one of the "wonders" accomplished by the O. R. C. We wonder what the wonder is the O. R. C. has accomplished. The new O. R. C. charges that the old O. R. C. "wholly fails to meet the requirements of organized labor," and the editor of the conductors' monthly says of the charge that "literally it is the truth, the order does not meet the requirements of organized labor." Is that one of the wonders? The *Dispatch* says the conductors send "respectful requests" to railroad officials. There is nothing wonderful about that, all employes do the same; and still the editor of the conductors' monthly says railroad officials treat conductors as if they were "a part of the machinery to carry out certain schemes of their own." Isn't that a wonderful confession? The efforts of the conductors to be taken into the "confidence" of railroad officials, reminds us of the Irishman, who said he was just half way successful in getting married. He said that "he and all his folks were in favor of it," and that "she and all her folks were opposed to it." It may be wonderful, but it is a fact, nevertheless.

We wish to call the attention of the members of the Brotherhood to a matter in which great justice is frequently done our Grand Master, as also our Vice-Grand Master. Complaints are constantly made that these Grand Officers do not visit Lodges when in the course of their official travels they happen to be in such proximity as would seemingly warrant a call. It should be understood that the Lodges are not more anxious to receive a visit from the Grand Officers, than they are desirous of calling upon them. But it should be borne in mind that when the Grand Officers are on the road they are on special business, having special engagements to be met on specified dates, and that to turn aside to visit Lodges would so completely derange plans and defeat purposes as would be destructive of efficiency in carrying on the work of the Order. If the brethren will consider the facts as stated, they will see there are, instead of complaints, many reasons for commending the faithfulness of the Grand Officers.

COLLAPSE OF THE C., B. & Q. STRIKE.

Circumstances demand that the membership of the Brotherhood of Locomotive Firemen, should have a straightforward statement of facts relating to the final close of the strike on the C., B. & Q. And this statement is all the more important because numerous and flagrant errors have gained currency in the reports widely disseminated by interested parties.

The Brotherhood of Locomotive Firemen was as vitally involved in the C., B. & Q. strike as was the Brotherhood of Locomotive Engineers. No honest man will controvert the proposition. Throughout the struggle the B. of L. F. proved itself in every emergency to be as considerate and as courageous as the B. of L. E., and by virtue of its fealty to the interests of the B. of L. E., was entitled to honorable and courteous recognition by that Order. This it did not receive, but on the contrary, as we shall show, the course pursued by the B. of L. E. towards the B. of L. F., has the appearance of a deliberate studied affront.

The B. of L. E. at its Richmond Convention, not only declined to repeal laws, the enactment of which, was an indignity, of such unquestioned insolence, that "a wayfaring man though a fool" need not err in comprehending the outrage, but in its deliberations relating to ending the C., B. & Q. strike, it concluded to ignore the B. of L. F. entirely, as if the Order had no interests at stake and was unworthy of notice. In proof of this we introduce here an extract of a letter from P. M., Arthur, Grand Chief, dated November 5, 1888, which is conclusive:

"The Convention also decided to appoint a committee of nine, with Bro. Alexander Cayner as chairman, to determine when the strike shall end on the C. B. & Q. Bro. Cayner will first go over that system, and see how the situation is, and address the men at the different places on the line, in view of a settlement. After which he will convene his committee and they are to decide when the trouble shall end, and no one but themselves is to know the result until they report to the Grand Officers."

We have italicised certain expressions in Grand Chief Arthur's letter, to Grand Master Sargent, to enable our readers to see how effectually the B. of L. F., was squelched, left out in the cold, disregarded and tabooed by the B. of L. E. in the "settlement" of the strike.

In reply to Grand Chief Arthur's letter of November 5th, we here introduce extracts from Grand Master Sargent's letter of November 7th:

P. M. Arthur, Esq.:

DEAR SIR AND BROTHER:—I am in receipt of your communication of November 5th, written by S. G. E. Bro. Everett, and I have noted its contents carefully and I must acknowledge that I am disappointed in the action taken at Richmond on the question of federation.

Referring to the strike, I had hoped that your Convention would end it, believing as I do that

it is a useless waste of time and money to continue it any longer. We are already feeling the strain ourselves; my mail is continually filled with communications coming from the officers of the Subordinate Lodges appealing to me in behalf of their members to excuse them from paying the heavy assessments which we have been compelled to levy. Others are prepared to surrender their charters and the situation is anything but agreeable to me. There can be no change however, until such time as the strike is declared off. And we will be compelled to contribute to the support of these men for a long time after as many of them will be without situations. Whatever may be the decision of the committee which you have appointed, I hope that they will bear in mind, that the Brotherhood of Locomotive Firemen are just as much interested in this strike as is the Brotherhood of Locomotive Engineers and that they will also consider this claim, that the members of the Brotherhood of Firemen are not all wealthy men.

In reply to Grand Master Sargent's letter of the 7th, Grand Chief Arthur writes as follows, under date of November 9th:

In regard to the strike we are deeply sensible of the circumstances by which you are surrounded, and nothing could have been further from our thought than to ignore you or your Brotherhood, but in view of the fact that your Convention adjourned without action touching that matter, and as you had expressed a hope that our Convention should declare it off, it was deemed wise to take step to fix a time to end it without giving any aid or comfort to the company.

This is what was kept in view and the welfare of the firemen in it was as much an object as was that of the engineers, and when the committee reports you will be fully informed of the course decided upon.

We are not disposed to indulge in severity of language in criticising Grand Chief Arthur's letter to Grand Master Sargent, of November 9th. It is easily seen that Mr. Arthur was not only "deeply sensible of the circumstances" which "surrounded" the B. of L. F., but was quite as "deeply sensible" that the circumstances "which surrounded" the B. of L. E. were of a character which he found it exceedingly difficult to explain. When the B. of L. E. deliberately "ignored" the B. of L. F., giving it a direct slap in the face in a matter in which the interests of its members were vitally involved, the declaration of the Grand Chief "that nothing could have been further from our thoughts than to ignore you or your Brotherhood," the very climax of irony is reached. Look at it; here were two great Brotherhoods engaged in a life and death struggle with a powerful corporation. It had cost them hundreds of thousands of dollars. Firemen, with a fidelity born of heroism worthy of monuments of marble, had stood by the engineers until they were impoverished. At this supreme juncture, the B. of L. E. concludes to take steps to terminate the strike. Does it consider the interests, the rights, the sacrifices of the B. of L. F.? No, not in the least. There is no word, no sign of recognition. On the contrary the action of the B. of L. E. is that of the most offensive ostracism. There is not so much as a squint at coöperation or federation.

The gush and slush about the "twin brotherhoods" disappears, and yet Grand Chief Arthur declares, as if he expected his assertion would be accepted as true, that in the appointment of a committee of nine, clothed with full power to settle the strike, in which no reference was made to the B. of L. F. or to its interests, "nothing could have been further from our thought than to ignore" the B. of L. F. It is sufficient to say that the declaration of Grand Chief Arthur was not accepted as conclusive. It is neither an apology nor an explanation. Indeed, it only serves to emphasize the fact that the B. of L. E. deliberately and purposely ignored the B. of L. F.

Proceeding with the history, it will be seen that Mr. Alexander R. Caverner, Chairman of the committee of nine engineers, proceeded to carry out his instructions. He went over the roads of the "Q." system, he held meetings and obtained information. He assembled his committee of engineers and made his report. The conclusion was to declare the strike at an end. In all of this no fireman had been consulted—no attention paid to the B. of L. F. officers or men. There had been neither coöperation nor federation—no allusion to the "twin (?) Brotherhoods."

At this juncture Mr. Alexander R. Caverner, Chairman of the committee of nine, bethought himself of the fact that there was such a brotherhood as the B. of L. F. The B. of L. E. had not authorized him to indulge such a thought, but he did remember it and sent the following telegram:

CHICAGO, December 27, 1888.

Sargent and Debs:

Can you select a committee of your Order to act in conjunction with our committee? Meet us at Commercial Hotel morning of December 29.
[Signed.] ALEX. R. CAVNER.

This was the first intimation the B. of L. F. had that the B. of L. E., or the committee of nine, recognized that the B. of L. F. had any interest whatever in the "Q." strike, or in the settlement of the strike. Grand Master Sargent was not in Terre Haute when the message was received, and Grand Secretary and Treasurer Debs, of the B. of L. F., promptly replied as follows:

TERRE HAUTE, IND., December 27.

Grand Master Sargent is expected home from the East this evening, and your message will be referred to him on his arrival. For myself I do not favor the appointment of a committee such as you suggest at this time. The invitation for joint procedure comes too late in the day. I have no doubt our regular committee representing the C., B. & Q., now at Chicago, will be amply able to look after our interests.
E. V. DEBS.

Upon the arrival of Grand Master Sargent the following message was sent to Chairman Caverner, at Chicago:

TERRE HAUTE, IND., Dec. 20, 1888.

A. R. Caverner, Commercial Hotel, Chicago, Ill.:

Referring to your telegram we have to say, that in our opinion, we should have been given

an opportunity of being represented in the tour of inspection of the "Q." system. We are in the habit of acting for ourselves in such matters, and hence we are not disposed at this late hour to join in the "amen" to what has been done. If we were not capable of doing our part from the beginning we are not willing to join issues now. We respectfully decline to appoint any committee for the purpose suggested in your telegram.
[Signed.] F. P. SARGENT, Grand Master.
E. V. DEBS, Grand Sec. & Treas.

The refusal of the B. of L. F. to appoint a committee to act with the Engineers' committee, was adversely criticised, and resulted in sending to Terre Haute a committee of two, Bro. R. H. Lacy, chairman of the C., B. & Q. committee, having charge of strike affairs, and Bro. George Goding. These men visited Terre Haute, and acting under advice, represented to Grand Master Sargent that it was important that a committee should be appointed to represent the Firemen on the committee of Engineers.

Grand Master Sargent thereupon transmitted to Grand Chief Arthur the following message:

TERRE HAUTE, IND., Jan. 2, 1889.

P. M. Arthur, Cleveland, Ohio:

I have been requested by A. R. Caverner, chairman of committee at Chicago, to appoint a committee of firemen to act with them in the matter now before them. Will you inform me if he has the authority to do this, and if you approve of the same as the Executive of the Order? Has this committee full power to act regardless of you? Answer at my expense.

[Signed] F. P. SARGENT, Grand Master.

In response to the foregoing the following reply was received from Grand Chief Arthur:

CLEVELAND, O., Jan. 2, 1889.

Frank P. Sargent:

Would advise you to grant Caverner's request in the interest of peace and harmony. He has not complied with my instructions, but I waive all in favor of having an end put to the strike.

P. M. ARTHUR.

Upon receipt of this message, Grand Master Sargent appointed Bros. S. W. Dixon, of Baraboo, Wis., and L. Moony of St. Joe, Mo., a committee to represent the B. of L. F.'s interests, as set forth in the following communication addressed to Chairman Caverner, of the B. of L. E. committee under date of January 2d:

GRAND LODGE
BROTHERHOOD OF LOCOMOTIVE FIREMEN.
TERRE HAUTE, IND., January 2, 1889.

A. R. Caverner, Esq., and Members of the Committee, Representing the Brotherhood of Locomotive Engineers and the Interests of the C., B. & Q. Engineers engaged in the present strike:

GENTLEMEN AND BROTHERS:—It is not necessary for me to introduce myself to you honorable gentlemen, as I am, no doubt, known to you both officially and socially and I will proceed to place before you certain facts and at the same time explain to you the reason of my forwarding the message to Bro. Caverner, chairman of your committee, signed jointly by Bro. Debs and myself, in reply to a request made by Bro. Caverner for us to appoint a committee representing the Firemen to go with you before the officials of the Burlington system. I desire to trespass upon your valuable time long enough to call your attention to the original compact entered into be-

tween the Engineers and Firemen in the beginning of this eventful strike. It was understood that in all our dealings both as committees and as executive officers among ourselves, or when before the officers of the company, that we should act together. I am not disposed at this time to pass any criticism whatever upon the action of the Brotherhood of Locomotive Engineers or upon any of its executive officers; I simply wish to call your attention to this matter in a fair and unbiased light.

When our Convention convened at Atlanta, the situation of the Brotherhood was not of an encouraging nature; we were encumbered with debt; we knew that we could not as a body, take any action in the matter of the strike, except to provide means for the maintenance of the men engaged therein until such time as the convention of your honorable body had convened and decided upon what they believed to be the best course to pursue. We provided means for the further sustenance of our men and awaited the action of your body. Being honored with an invitation to be present in Richmond as a guest of your Brotherhood, I was able to meet with many of the prominent members, together with the grand officers, and I presented when the opportunity offered, my exact position as an executive official, stating that we as an organization were willing, at all times to do anything that was honorable toward bringing about a satisfactory settlement of the difficulty. I was assured that some action would be taken whereby some means would be devised which would lead to the ending of the strike. I returned home and shortly after the termination of your convention, I received an official communication from G. and Chief Arthur in which he informed me that a committee of nine had been appointed with Bro. Alex. Canner as chairman, to determine when the strike should end on the C. B. & Q.; that Bro. Canner should first go over the system and see what the situation was and address the men at different places along the line in view of a settlement; after which he would convene the committee and they were to decide when the trouble should end and no one but themselves was to know the result until after reporting to the Grand Office. I immediately wrote a letter to Grand Chief Arthur, in which I expressed a feeling of dissatisfaction on account of the Firemen not being requested to appoint members of the organization to represent them; I believe that if there was a representative of the Engineer's organization going over the system that there should also be a representative of the Firemen accompany him. I may have been wrong in my view, still I have seen nothing yet to change my opinion. In reply to my letter to Grand Chief Arthur, he stated that it was not the intention to ignore us in any manner, but as I had expressed the hope that his convention would devise the means of ending the strike, it was deemed wise to take steps and fix a time to end it without giving any aid or comfort to the company. He further stated that the Firemen and their welfare were kept in view and that when the committee made its report that I would be fully informed of the course decided upon, no intimation being made however, that I was at liberty to appoint any Fireman to go in conjunction with the committee of Engineers. While the communication did not just meet my views, I said to my associate, "We will await the report of this committee." A few days after I visited Cleveland and had a conversation with Grand Chief Arthur in which I again broached this matter and was again informed by him that it was no intention on the part of the convention to ignore the Firemen and that our interests were considered equally with theirs. He furthermore informed me regarding the authority delegated to the committee and led me to believe that all you could do was simply to assemble, receive the report of Bro. Canner and then recommend what further action should be taken by the grand officers when we should con-

vene as grand officers and decide the issue. A few days after this I was present in the city of St. Paul and had a pleasant interview with Bro. Hays, who is, I believe, a member of your committee; I expressed to Bro. Hays my opinion and I desire to say, I found him exceedingly courteous, and he coincided with my views, saying it was all due to an oversight and that he would communicate with Grand Chief Arthur on the subject. I stated to Bro. Hays that if Grand Chief Arthur requested of me the appointment of a committee, I would gladly do so; nothing more was heard of the matter. I was receiving communications daily from all sections of the country asking why the Firemen were not represented on this committee; such communications I answered in as honorable a manner as I knew how, placing no censure upon any one and saying nothing that would in any manner, lead intelligent men to think we had any desire to antagonize.

In my absence from the city Bro. Debs received a telegram from Bro. Canner requesting us to appoint a committee. Bro. Debs answered the message, expressing his sentiments, not for the purpose of creating ill-feeling, but simply to place us and our Order before the committee in an honorable light. Upon my return the message was submitted to me, and in view of the fact that throughout this entire strike we have acted jointly, believing that we should have been requested to make appointments on that committee of engineers, and in view of the further fact that at the time of learning officially of the action of the committee, I wrote to Grand Chief Arthur calling his attention to my feelings and afterward in my conversation with Brother Hays, in which I gave him to understand that if Grand Chief Arthur would request of me the appointing of a committee that I would gladly do so; I believed, as did Bro. Debs, that it was entirely wrong to ask us to send a committee to go before the officers of the Company after the committee's work in a large measure had been accomplished. When I say "committee's work" I refer to the Chairman who had been over the system interviewing men and observing the situation while we were not represented nor even requested to be; and for this reason our message was sent. This morning a committee of two of the general committee representing the firemen on the C. B. & R., presented the position you occupy and authority delegated to you by your grand body. After a careful consideration of the matter and a desire to bring about an amicable settlement of the present difficulty, create harmony and good will between all labor organizations, especially our co-workers, the engineers, we have wired the following message to Grand Chief Arthur: "I have been requested by A. R. Canner, Chairman of committee at Chicago, to appoint a committee of firemen to act with others in the matter now before them. Will you inform me if he has the authority to do this and if you approve of the same as the Executive of the Order? Has this committee full power to act regardless of you? Answer at my expense."

Considering the correspondence and conversation we have had on this subject with Grand Chief Arthur, it is no more than right that he should, as an executive of the organization he represents, endorse the appointing of a committee representing the Firemen, to take part in these deliberations. Upon receiving his reply, if he endorses your request, I shall immediately instruct two members of our Order, who are intelligent, capable and somewhat familiar with the situation to report to you at once. I can assure you that whatever you decide upon doing, these representatives will acquiesce in so long as it is to the interests of the organizations involved.

I am sorry that there should be any misunderstanding on account of this matter, but I think time will demonstrate to intelligent thinking minds that the position taken by the Grand Officers of the B. of L. F., has been an honorable one and all we ask is that consideration which all

honest men are entitled to. We may differ in opinion, but that we have a right to do, and when it comes to a matter of such grave importance as the one that now presents itself for our consideration, we should set aside all personal feelings and act to the best interests of those we represent.

I can assure you, gentlemen, that you have the best wishes of the Grand Officers of the Brotherhood of Locomotive Firemen and we only trust that through your deliberations may come such good results as will redound in honor to yourselves as well as to the organization which you represent.

Yours fraternally,
F. P. SARGENT.

It will be observed that the B. of L. F., notwithstanding the fact that it had been ignored in a way to arouse sentiments of honest indignation, yielded to overtures to participate in the deliberations of the Engineers' committee, after conclusions had been arrived at which, whether right or wrong, it was entirely powerless to change. This fact was well understood by Grand Master Sargent, and his compliance with the request to appoint a committee contemplated nothing more than a courteous recognition of conditions the B. of L. F. had been rendered utterly powerless to either shape or control, having for its purpose a desire not to embarrass negotiations, but to exhibit a hopefulness that the final outcome should be as favorable as possible.

In the facts as we have stated them, and upon which, so far, we have commented with such mildness as we could command, it will be seen that in the final settlement of the C., B. & Q. strike no responsibility whatever attaches to the B. of L. F. The B. of L. E., by the action of its convention at Richmond, assumed the entire responsibility, and its committee of nine went forward in the discharge of its duties totally regardless of the B. of L. F., and the fact that after conclusions had been arrived at, after the verdict had been made up, a committee of two was appointed by Grand Master Sargent to represent the interests of the B. of L. F., in no wise changes the situation, for at most, all the committee could do was to signify assent to the action of the Engineer's committee, and to have dissented from its action would have in no regard changed results.

After the Engineers' committee of nine had declared the strike off, as it was empowered to do by the B. of L. E., and from whose decision there was no appeal, it sent a sub-committee over the roads of the "Q." system to give the men instructions, etc., relating to the proper course of procedure, etc. This was a prudent move. The men doubtless needed instruction, but we are informed that this sub-committee of two took advantage of their mission, whether upon their own election or in obedience to instructions we are not prepared to say, to state substantially to the men along the

lines that the B. of L. F. was responsible for the failure of the strike on the C., B. & Q. There is no reason to doubt this statement. The B. of L. F. sent a representative over the system and his report to the Grand Lodge of B. of L. F. gives the information as we have stated.

We confess that we find it difficult to comprehend the animus of such a flagrant outrage. Its mendacity is equalled only by its impudence. It surely ought to have been sufficient for the B. of L. E. to have assumed the entire responsibility of declaring the strike off, of arrogating to itself all authority in the matter, without finally adding injury to insult by so much as an intimation, that the B. of L. F. was in any degree whatever responsible for the collapse of the strike. And it is this final charge, made by the sub-committee of two of the strike committee of nine, that has made it necessary for the *Magazine* to lay before its readers all the facts bearing upon the case.

In this connection it becomes necessary to state that among other things charged in support of the allegations that the B. of L. F. is responsible for the failure of the strike, is a letter written by Grand Master Sargent in reply to a letter received from Bro. J. E. Kline, of Plattsmouth Neb. As special efforts have been made to misrepresent Grand Master Sargent in the matter, we here give the full text of the correspondence:

PLATTSMOUTH, NEB., December 6, 1888.

F. P. Sargent, Esq., Grand Master:

DEAR SIR AND BROTHER:—Yours of recent date to Bro. Zinn, was referred to me and I was requested to ask for information. Since you cannot assure us our support after November, can you give us any encouragement in regard to the committee of nine, with Canner at the head, which was appointed at the late Engineer's convention. We have been notified that they would put on the boycott, which I think is the only means to win this fight. I am very much afraid that this strike is lost, and that we (the men on the Q.) are sacrificed. I have been a Brotherhood fireman about two years and have done everything in my power to promote the Order, and I have always thought that nothing could break our organization, but I am afraid if this strike is lost, that we fall beneath the heels of capital; yet I am satisfied that some move can be made by our Order to crush the C., B. & Q. into submission. Now, in regard to some of the strikers refusing employment on other roads, preferring to lay idle on the forty (\$40.00) dollars paid us for so doing, I think is false, and I am satisfied I can convince your informant; in the first place, well do you know that there are many roads that want men, but refuse to employ C., B. & Q. strikers, until the strike is declared off. Furthermore, we have men working on all the roads in the country that will employ strikers. I am sorry that those men who are being expelled for non-payment, cannot see that it is to their benefit to sacrifice a few dollars per month, while we, who are in the fight, sacrifice on an average of thirty-five (\$35.00) dollars per month. I would to God that those men have their wages cut down one-half in the next twenty-four hours. In conclusion, I ask you your candid opinion in regard to the boycott. Please let me hear from you at once.

Sincerely yours, JNO. E. KLINE,

GRAND LODGE
BROTHERHOOD OF LOCOMOTIVE FIREMEN,
TERRE HAUTE, IND., December 14, 1888.

John E. Kline, Esq.:

DEAR SIR AND BROTHER:—Your favor of December 6th, came to hand during my absence from the city, which accounts for a delayed answer. I cannot give you any information of the action of the committee appointed by the engineers in their convention, other than what I received from Grand Chief Arthur, and one member of the committee. I have heard that it was the intention of the committee to end the strike; but I can say to you honestly and candidly, that so far as a boycott is concerned it is simply nonsense to talk about it. Any sane man who will carefully consider the present situation of the C., B. & Q., and the condition of our organization, would see the folly of contemplating such a step. The day for boycott has long gone by; there was a time when it could have been put into effect, and something accomplished by it, had there been any disposition on the part of a large number of men to maintain it, but any man who was a witness of the situation at Chicago, during the time of the boycott, would see the folly of talking about one in this instance, and I must say to you very firmly and honestly, that the Brotherhood of Locomotive Firemen, as an organization, will have nothing whatever to do with a boycott, no matter what Mr. Cavanaugh's statements may be. I am waiting for the report of this committee which has been appointed by the engineers. When their report comes in, if they have no way of ending the strike, I will find a way of getting the Brotherhood of Locomotive Firemen out of it, and I will go to work and endeavor to find employment for our members who are not able to find it themselves. It is a very good idea to go to work and preach federation, and all these different doctrines, and then when the time comes to act upon them, repudiate them. There is no man who appreciates the manly stand of the C., B. & Q. firemen more than I, and there is no one in a better position to see the condition of the organization than I am. I am speaking for no effect other than to express my honest opinion. The time has come when this strike must end and the men must look for employment, and the quicker this is done the better it will be for all concerned. There are those in our Order who are not earning \$40 per month and whose wages are far below the wages paid on the Western roads. These men have paid their last dollar and they are in want; their families must have clothes, they must have fuel to keep them warm, and I can tell you as a friend and brother that I do not propose to drive such men out of the organization after having done what they could to maintain this strike. As soon as the strike is off we will devote our time and attention to finding employment for such men as desire to make application to the Grand Officers.

Let the consequences be what they will we have decided upon the stand we shall take, and I shall take it as an official of the Order. The engineers in their Convention were informed of my opinion, as was Mr. Cavanaugh, and it seems to me that when their committee was appointed, it would have been nothing more than proper courtesy to have requested one of our members to act with them. This they did not do. They say it was an oversight, but it does not change my opinion as to their duty. I have learned through a member of the committee of what their action will be, and I desire to say to you as a brother with the best feeling towards you and other members of your Lodge and all strikers, that the advice we gave you in our last communication was for your best interests as well as to the interests of every member in the country. The men who preach boycott had better be engaged in bringing about federation of the different organizations, so that they may act in harmony one with another. Better be men and acknowledge the strike lost, look for work and get them-

selves in a position to fight again when we are called upon to do so.

I trust you will receive this communication in the spirit in which it is written, as I desire to be honest with you and to give you what I believe the best advice that I possibly can, and mark my words, the day will come when you will say that I was right. It may be when I am officially dead, but I know what the final result will be. I have the best of feeling for the engineers on the Burlington system; they have done their duty and done it manfully, and had they the support which they ought to have had, the result of the strike would have been very different.

Trusting that the brothers have decided to take the advice of one who is their friend, and if they desire assistance in the way of positions and situations that they will apply for them, and wishing you all success, I remain,

Yours fraternally,

FRANK F. SARGENT, G. M.

The particular charge made was that Grand Master Sargent had advised firemen to take the places of engineers. And upon this gratuitous falsehood every conceivable charge has been rung. It will be observed that there is not so much as an intimation of such a thing, nor can any amount of torture of Grand Master Sargent's language make it convey such an idea.

The subject upon which we have been called to write is by no means a pleasant one, but it is in the line of duty, and on such matters we unhesitatingly accept the task. From first to last the B. of L. F. has maintained a manly, honest attitude. It has done its duty. In a fight, largely to promote the interest of engineers, it has neither flinched nor swerved. It is not in a position to make apologies. It has from the inception of the C., B. & Q. strike maintained its dignity, its self respect and its prestige. Quick to recognize courtesies and confidence, it has the required courage to repel insult and expose mendacity.

THE VICTORY.

The prize is thine, Monopoly,

Your triumph is complete;

You have the nation in your hands,

The people at your feet.

Uplift your cold and bloodless arm

And ply the scorpion lash;

Let every stroke inflict a wound,

And every blow a gash.

Bid Hope and Charity retire,

Let Justice drop the beam;

Proclaim the reign of Selfishness,

Enthroned with power supreme.

Heroic treatment works the cure

When simple agents fail;

Tornadoes hurl the ship to port,

White calms benumb the sail.

They war in vain, tho' victors oft,

Who battle for the wrong;

To thee of old, Eternal Truth,

The victories belong.

O. H. Wilmarth.

Albany Journal:—Farming is one of the best occupations for a young man. Even cabbage culture will enable a struggling youth to get ahead.

ODE TO A TURTLE-DOVE.

O bird that sittest thus alone
In garb subdued, the pensive tone
In rhythmic, sad, recurrent moan,
With list'ning pause
Proclaims that thou hast anguish known,
Yet hide the cause.

Time was I smil'd to hear thee coo,
And thought it but thy way to woo
A recreant lover to renew
His broken vow,—
My heart with thine is tuned too true
To doubt thee now.

Like thee, beside a ruined nest,
Despair my constant, only guest,
Beneath a thousand cares oppressed
I sit and sigh;
And ponder, dully, which is best,
To live or die.

I backward glance, a path of pain,
Defaced with many a sinful stain;
A barren, fruitless, desert plain,
The now and near;
And from the storm-beat future's main
I shrink with fear.

O, mournful bird, had I thy wings
To soar above all ear-bly things,
The snares of pride, the envious things,
"Sin's artful snares,"
And all the troop misfortune brings
Of cruel cares!

Thou mayest hope; some prowler may,
With unintended kindness slay
Thee ere the twilight veils the day
And give thee peace,
Whilst I am sinning e'en to pray
For like release.

—Charles Eugene Banks, in *Arkansaw Traveler*.

COL. INGERSOLL'S BRINGING UP.

Mail and Express.

Col. Robert Ingersoll's father, Dr. John Ingersoll, was a large hearted, generous man, and one of the few ministers of his time who dared to raise his voice in defence of the negro slave. Like many men who possess the magic power to move men's minds, he was restless—ever seeking fresh fields and pastures new, so, with his five young motherless children, of whom Col. Bob was the baby, he lived the precarious life of a zealot, "counting all things but loss and dross if that he might win souls." He never lost sight, however, of the importance of education for his children, and wherever their lot was cast, whether on the top wave or in the depths, this alert-minded young family missed no opportunity of acquiring a keen knowledge of men and things. When Robert was about 16 years old his father settled in Peoria, Ill., and there began controversies on religious subjects between father and son. The old minister was heard to say: "It grieves me to hear my Robbie talk so, but I

declare he is too much for me. I am not able to answer him."

Robert, after dabbling a little in poetry and journalism, studied law, and was admitted to the bar at the age of 19. Strikingly unsuccessful for several years, he to-day proves the truth of the old saw that "bad beginnings make good endings," for his law practice is one of the best in New York and his income from it is very large—so large, in fact, that he has given up lecturing, for which he never had any liking and to which he never would resort except when he unexpectedly found himself in want of a few thousand dollars. Family affection is a predominating characteristic of the Ingersolls, and between Robert and his brother Clark there was the tenderest fraternal love. They never outlived their boyish devotion to each other. The intense love and adoration which Col. Ingersoll lavishes upon his wife and daughters, and which they return in kind, is such as one dreams of; they have literally four souls with but a single thought, four hearts that beat as one.

AND HE STILL HAS HOPE.

The Sublime Faith of a Man Who Has Met
With Everything But Death.

Daylight Land.

"I have been shipwrecked, been baked in a railroad accident and fired out of a foundry window by a boiler explosion. I was shot in the neck at Gettysburg, suffered starvation in Libby Prison, fell overboard from a transport off Charleston and left four of my fingers in the mouth of a shark. I had my right arm broken in two places in a New York riot, and stood on a barrel with a halter round my neck in a Southern town at the outbreak of the great rebellion from sunrise to sunset. I was buried under the ruins of a building in San Francisco during an earthquake, and dug out after fifty hours of imprisonment. I have been shot at three times, twice by lunatics and once by a highwayman. I was buried two days by a gas explosion in a mine, and narrowly escaped lynching last year in Arizona through mistaken identity. And though I am over fifty, and have nearly lost the use of my right leg, have just had, as I understand, all my property, on which there was no insurance, destroyed by fire in a Western town; and the doctor in New York to whom I went last week for an examination assures me that I will soon be bedridden from rheumatism; nevertheless," he added cheerfully, "while I undoubtedly have met with some obstacles in the past, I still refuse to believe that luck is against me."

Philadelphia Call:—A revivalist says that men have no faith. Wonder did he ever see a man bite into a store pie?

A BEAUTIFUL TRIBUTE.

In all the languages there can be nothing more beautiful and pathetic than the following tribute of Col. Robert G. Ingersoll to the memory of an estimable woman, who, in life, was his friend:

MY FRIENDS:—Again we stand in the shadow of the great mystery—a shadow as deep and dark as when the tears of the first mother fell upon the pallid face of her lifeless babe—a mystery that has never yet been solved. We have met in the presence of the sacred dead to speak a word of praise, of hope, of consolation. Another life of love is now a blessed memory—a lingering strain of music. The loving daughter, the pure and consecrated wife, the sincere friend, who, with tender faithfulness, discharged the duties of life, has reached her journey's end. A braver, a more sincere, a more chivalric spirit—clasping the loved and by them clasped—never passed from life to enrich the realm of death. No field of war ever witnessed greater fortitude, more perfect, smiling courage than this poor, weak, and helpless woman displayed upon the bed of pain and death. Her life was gentle and her death sublime. But there is this consolation: She can never suffer more; she can never feel again the chill of death; never part again from those she loves. Her heart can break no more. She has shed her last tear, and upon her stainless brow has been set the wondrous seal of everlasting peace.

When the Angel of Death—the masked and voiceless—enters the door of home there come with her all the daughters of Compassion, and of these Love and Hope remain forever. You are about to take the dear dust home—to the home of her girlhood and to the place that was once my home. You will lay her with neighbors that I have loved that are now at rest. You will lay her where my father sleeps.

All I can say is:

"Lay her in the earth,
And from her fair and unpolluted flesh
Let violets spring."

I never knew, I never met, a braver spirit than the one that once inhabited this silent form of dreamless clay.

THE ORIGIN OF THE BELL CORD.

Buffalo Courier.

The general abandoning (?) of the bell cord system of signalling on trains recalls the amusing way in which that system had its origin. It was on the Erie about 1840. The road was then in operation between Piermont and Turner's. One passenger train, which was also a freight, ran each way on the road. The conductor was "Poppy" Ayres. There were no ticket offices or agents in those days, and the conductor had to collect fares on the cars. There was a great controversy between the conductor and engineer as to which was the actual head train management. "Poppy" Ayres had an engineer who was particularly obstinate in his belief that in the engineer was vested the superior rank. In collecting fares "Poppy" frequently had difficulty in getting his money from obstreperous passengers, and as he could not throw such passengers off with the train going at full speed, and as he had no way of letting the engineer know that he wanted the train stopped, a great many fares were lost by passengers reaching their destination before they could

be induced to pay up. One day Ayres had had a particularly annoying run in that respect, and after reaching Turner's he resolved to provide some means of communication between himself and the engineer, so that he could control the management of the train between stations. After much thought he hit upon a plan. He sent to New York for a hundred yards of bell cord. To one end of this he fastened a stick of wood, which he hung in the engineer's cab, or what passed for a cab in those days. Then he ran the rope back over the cars to the end of the train, and let it hang down so he could catch hold of it on the rear platform. He told the engineer that when he pulled the stick of wood the train must be stopped, no matter where it might be. But this innovation in railroading struck the engineer as one that would lower his rank and remove from him the dignity of being master of the train. So on the first trip with the conductor's signal he removed the stick of wood, and "Poppy" Ayres was as bad off as ever. But the conductor was determined to settle the question then and there, and when the train reached its destination he replaced the stick of wood, and told the engineer that if it was removed again or was not noticed when agitated, either the engineer must lick the conductor or the conductor would lick the engineer. The engineer removed the stick at once, and "Poppy" Ayres hit him a blow that knocked him off the engine. The conductor jumped after him, and followed up his blow with a trouncing that made the engineer cry "enough." That settled the introduction of the train signal to American railroading, and also the question as to who was master of the train. "Poppy" Ayres replaced the stick, and it was not again disturbed, but its signalling was answered faithfully and promptly by the engineer. The idea was soon improved upon, and the stick of wood gave way to the bell, and every railroad then in existence or that ever came into existence afterward adopted this system. "Poppy" Ayres died four years ago at Oswego, aged 80 years. He was retired from the service of the road on a pension in 1868.

BENJAMIN FRANKLIN'S BEQUESTS.

In 1890 will end the term of 100 years during which the cities of Boston and Philadelphia have each enjoyed the revenue from the bequest of \$5,000 made by Benjamin Franklin. The money was to be loaned to young married artificers, and the trust has been executed, although the lapse of the century requires a new disposition of the funds. It is significant that while in Boston the \$5,000 have grown to nearly \$328,000, in Philadelphia the \$5,000 have become only \$70,000, and that in both cases the amount is less than Franklin estimated it would be.

DUALITY.

You say that your nature is double, that life
Seems more and more intricate—complex and
dual,
Because in your bosom there rages the strife
Twixt an angel of God and a beast that is cruel.
An angel who tells you your spirit has wings
And a beast who would hold you to temporal
things.
You say you have striven in sorrow and pain
To slay this fierce foe to your soul's fair en-
deavor.
You say if the angel possessed the domain
Your life would mount upward and onward
forever.
But you fear that the beast in his powerful
strength,
May overcome even the angel at length.
I listen with interest to all you have told—
And now let me give you my views of your
trouble,
You are to be envied, not pitied; I hold
That every strong nature is always made
doubtful.
The beast has his purpose—he need not be slain,
But should serve the good angel in harness and
chain.

The body that never knows carnal desires—
The heart that to passion is always a stranger
Is merely a furnace of unlighted fires—
It sends forth no warmth and it threatens no
danger.
But who wants to shiver in cold safety there?
Touch flame to the fuel then watch it with care.
Those wild, fierce emotions which trouble your
soul
Are sparks from the great source of Passion
and Power,
Throne Reason above them, and give it control—
And turn into blessings this dangerous power.
By lightnings unguided, destruction is hurried,
But chained and directed, they gladden the
world.

—Ella Wheeler Wilcox.

SPOTTING CONDUCTORS.

Indianapolis News.

The railroad "spotter" is a subject on which many newspaper articles have been printed, and he has been given nearly super-natural powers, as well as the most wonder-ful mechanical skill. His manner of work-ing has been "explained" many times, the most intricate machines have been placed in his hands, he has carried mirrors, reflectors and glasses of various kinds. The com-monest explanation of his manner of detect-ing or "spotting" conductors is that he car-ries a small hand glass or a mirror arranged in a tiny frame similar to that of a botani-cal microscope, and sitting with his back to the conductor, watches the reflection in the tiny glass of every movement the ticket puncher makes. This is a mistake. The work of "checking up" a car is so simple that there is not a ten year-old school boy in the city but can do it. While Pinkerton is credited with doing a great deal of work in this line his men in reality do but very little. It is principally done by operatives from Thiel's Agency at St. Louis. Thiel makes a specialty of railroad work, and has in his employ about 1,800 men, with branch

offices in Denver, San Francisco, Washing-ton, D. C., and New York. Whenever a conductor is brought into court in nine cases out of ten, the detective making the charge against him will be found to be "a Thiel crook," "crook" being the professional name of the spotter.

To "cover a car" is a very simple job, though it requires a little mental dexterity, and in order to "cover a train" a spotter must be put into each car, the statement recently published that one spotter can check up an entire train being as erroneous as many others that read well but are sadly lacking in truth.

Suppose now a spotter is ordered to check up a certain conductor between Indianapo-lis and Columbus. He boards the train at this point and generally selects the ladies' coach. He has with him a small book of blanks similar to the accompanying dia-gram:

This is supposed to represent the inside of the car, and the spotter at once numbers each seat, generally seating himself in the last right hand seat, marked O in the dia-gram. Thus he is able to see everything in the car. When the train starts there are in this coach, say, nine persons, situated as fol-lows: In seat No. 1, a lady; in seat No. 4, two gentlemen; in seat No. 18, a gentleman; in seat No. 22, two ladies; in seat No. 6, a lady and gentleman. The conductor, in col-lecting fare, always enters at the front end of the car, marked in the diagram A. The lady in No. 1 hands him a ticket. The spot-

ter does not know her destination, but he notes that she gave a ticket. One of the gentlemen in seat 4 pays a cash fare in silver money, the other has a mileage book. The conductor speaks pleasantly to the man in seat No. 18 and goes on. He is an official of the road; the spotter does not know it. The man in seat No. 11 hands out a ticket and some currency. He has a ticket for a part of his journey, but pays the difference in paper money. The conductor gives no duplex to him. The two ladies in seat 22 talk for some minutes to the conductor and finally give him two tickets. One ticket he punches, the other he divides in two, returning one-half of it to one of the ladies. The lady and gentleman in seat No. 6 hand out two long tickets, which are punched and handed back by the conductor. The "spotter" hands his ticket or cash, as it may be, and the principal part of the work is done. Of course, at way stations, passengers get on, and the same kind of record is kept of them. The lady in No. 1 gets off at Greenfield. One of the gentleman who paid coin, left the train at Irvington. The man in No. 11 got off at Cambridge City. The ladies in No. 22 and the lady and gentleman in No. 6 were on the train when the spotter left it, say at Richmond. Perhaps between this city and Richmond fifty persons have entered and left the car, but a record of the nine will give an idea of the record against the fifty. The spotter leaves the car at Richmond. He sends in his report, filled out as follows:

December 5, 1883. Train No. 76. Conductor John Jones. Left Union Station, Indianapolis, Ind., 4:30 P. M. Arrived at Richmond 7:15 P. M. There were nine passengers in coach No. 85, as follows: [Then comes the diagram blank, filled out with the location of the passengers, as previously described.]

Lady in No. 1 left car at Greenfield. One man in No. 4 paid in coin and left the train at Knightstown. The other man had mileage book, and left the train at the same point. Man in No. 18 paid no fare, nor showed any credentials of any kind; was still on the train at Richmond. Man in seat 11 has ticket and currency; conductor gave no duplex; passenger left train at Cumberland. Two ladies in seat 22, tickets one-round trip; conductor did not punch single ticket; both ladies left train at Cambridge City. Lady and gentleman in seat 6; long tickets; both tickets punched and returned.

A. A. A. Car badly ventilated.

X. X. X. Car very dirty.

— — — Car too cold.

— — — Conductor uncivil.

J. Conductor familiar with lady passengers.

B. B. Disturbance in car.

O. No water.

Total number of passengers in car when left at Richmond, 20.

Used ticket No. 83,567 from Indianapolis to Richmond. [If cash is paid the duplex receipt is pinned on.] PETER SLICK, Special Agent.

If the spotter feels that he is not suspected he will go on to Columbus, but if he does not, another spotter will take the car to Columbus, and do the same recording. The spotter sends his report to the manager

of the branch office to which he is attached, and the manager sends it written out in full to the Division Superintendent. If the conductor's report is not in accordance with that of the spotter, the ticket puncher is called on the "carpet" for an explanation, if the difference is slight. But if bad reports come in often against the conductor he is suddenly "let out," and never knows why.

"But are you not liable to make a mistake?" asked a *News* reporter of one of these special agents. "Suppose that a man has a family ticket, good for so many trips? He does not wish to go on that train but sends his family, he follows them on the next. He hands his book to the conductor before the train starts, stubs for the family are torn out, you see the conductor pass that family and your report shows that he dead-headed them; would that not be working an injury to the conductor?" "In the first place the conductor has no right to do that way; but if he does his report in the ticket receiver's office shows the total passengers carried between certain points, and he has either tickets, cash or passes for every one. Therefore I am blamed, not the conductor."

All reports to the contrary, spotters are used on many roads yet, though the conductor has not the chance for a "take off" that he had years ago, when he would toss up all the money received on a trip, and hand over to the company the money that hung to the bell-cord, keeping the balance himself. The system of gate keepers in vogue at large stations like Indianapolis is also a good check, but gate-keeper are not located at points. "Spotters" are used on sleeping cars more than in any department of the railroad service, but their work is similar in many respects to the description in this article.

THE FEARLESS ENGINEER.

He rides in the eye of danger,
Yet no danger does he fear,
To terror he's a stranger,
He's the hardy engineer.
The thunder growls in the hollows,
The lightning leaps in his path,
Yet his duty he bravely follows,
He fears not the tempest's wrath.

The darkness descends like blindness,
To blot out the steel-shod track,
Yet his grand face glows with kindness,
And no courage does he lack.
The rain comes down like a river,
But he cleaves the storm-swept shroud
Of night—while the mountains shiver—
As an eagle cleaves the cloud.

He thinks of the fair face waiting
For him at the end of the line,
And the thought his heart is elating,
With a rapture almost divine.
And although the storm is shaking
The heart of the town with fear,
His spirit thinks not of quaking,
He's the fearless engineer.

—New York Ledger.

A GEM.

The author of the following is a well-known young man of this city. His initials are—Walt Mason. The mortal man who reads by the glimmering light in the gloaming these lines and has not his soul lifted upon the wings of hope into the ethereal beyond, deserves the censure of all right minded people as being devoid of soul. Walt Mason is a true poet. The gem has no title—it is all title:

There are rainy days and gloomy, when the clouds obscure the sky,
When the wind goes walling westward with a sobbing, plaintive sigh;
When the dismal mists are rising like a dark sepulchral veil,
When the brook is moaning mournful, and the skies pretend a gale,

But
Still

There is also glad some weather, when the sun is shining bright,
When the brook goes flowing onward in its sparkling silver sheen,
And the birds are singing carols in the swaying branches green.

There are mournful, murky midnights, when the wind seems like a breath,
Cold and chilly, mist and ghostly, from the bloodless lips of Death;
When each shadow seems a phantom, and each sound upon the air,
Like the hollow, horrid groaning of a spirit in despair,

And
Yet

There's glory in the dawning, when the shades have passed away,
When the couriers of the darkness flee before the sword of day;
When the grim and grizzly spectres haunt our waking eyes no more,
When the walling winds are resting and the weary night is o'er.]]

There's a black and silent ocean rolling 'neath a starless sky,
Where in ceaseless, sad procession, phantom boats are gliding by,
Where the silence is eternal, and the darkness deep and dead,
Where the boats are guided onward by the spirits of the dead,

But

Still

There's a heaven over the waters, far across the ocean's breast,
Where the darkness never settles and the oarsman is at rest;
And it's ever thus with mortals—when the hour the darkest seems,
Then the dawn is surely coming, with its golden, glowing gleams

WHAT DOES A CAR WHEEL COST?

A letter from Eaton, Pa., to the *Philadelphia Press* has the following which gives some figures that are interesting, says the *Railway Age*, ignoring the political connection in which they are employed:

At several democratic rallies in this county the speakers have reiterated a statement which has appeared in many democratic papers, that a "car wheel weighing 500 lbs. sells for \$12. The entire labor cost is 85 cents. What becomes of other parts of the money?" This assertion is always introduced in a way to insinuate that the company pockets enormous profits. Edward Warne, of this city, anxious to ascertain the

true facts, wrote to the Taylor Iron Works at High Bridge, N. J., with the request that it should answer his queries. A reply came to-day and it shows how gross are the misrepresentations on this subject. The letter is explicit and lengthy. It discusses the proposition to reduce the duty on charcoal pig iron \$20 a ton, as the Mills bill proposes, and points out the unreasonableness of expecting that the price would be cheaper because American pig iron of the same kind is exported to some extent to England. Chilled car wheels are made from this kind of pig iron, and a 500 pound wheel sells at \$8, not \$12.

Now as to the labor item. The company states that the average cost of charcoal pig iron used in casting car wheels is \$26.50 a ton, from which four wheels can be cast. Old car wheels to the extent of 25 per cent. can be used, which proportion at \$19 a ton, the present price, would bring the cost of the metal, unmelted—three-quarters charcoal pig iron, one-quarter old car wheels—to \$24.62½ per ton. The item of labor in this amount is 90 per cent. of the whole. The labor, therefore, on the metal for wheel, unmelted, would be one-quarter of 90 per cent. of this cost of \$24.62½, or \$6.16, and this the wheel manufacturer pays out before the material comes to his mills. Then the items are as follows for one wheel: Cost for melting, core drying, etc., 20 cents; sand, moulds and cores, flour and facing, 15 cents; foundry labor of moulding and casting, 85 cents; outside work, unloading pig iron, coal, etc., 10 cents; repairs, wear and tear, taxes, insurance, motive power and delivery charges consume 40 cents more, and the cost is \$7.86, leaving the company just 14 cents profit on each wheel.

The company adds that "the fact is that all labor required in making car wheels from the raw material or minerals used fully equals 75 per cent. of the cost. The moulders who make wheels earn \$3.50 a day, as against \$1.25 paid in England. Should all the raw materials up to the finished wheel be reduced to the English standard, the wheel could probably be made at a reasonable profit to the manufacturer."

SEVERE ON A POOR MAN.

New York Sun.

Woman (to tramp)—Are you a man of family?

Tramp—Yes, I've got a wife and seven children, but I left them. It's hard enough for me to make my own livin', let alone such a family at that.

Woman—Well, I can't give you nothin' to eat nor drink, nor old clothes nor shoes, nor nothin'; s' be off with you.

Tramp (sadly turning to go)—You're pretty hard on a man, madam, who has a wife and seven children.

THE DOOR OF THE HEART.

Tyle the door carefully, Brothers of skill,
 Vigilant workers in valley and hill!
 Cowans and eavesdroppers ever alert,
 Tyle the door carefully, door of the heart.
 Carefully, carefully, tyle the door carefully,
Tyle the Door carefully, door of the heart.

Guard it from envyings, let them not in;
 Malice and whispermings, creatures of sin;
 Bid all unrighteousness sternly depart,
 Brothers in holiness, tiling the heart.
 Holily, holily, tyle the door holily,
Tyle the Door holily, door of the heart.

But should the Angels of Mercy draw nigh,
 Messengers sent from the Master on high—
 Should they come knocking with mystical art,
 Joyfully open the door of the heart!
 Joyfully, joyfully, ope the door joyfully,
Ope the Door joyfully, door of the heart.

And they not present, those angels to-night,
 Laden with riches and sparkling with light?
 Oh, to enjoy all the bliss they impart,
 Let us, in gratitude, open the heart!
 Gratefully, thankfully, ope the door thankfully
Ope the Door thankfully, door of the heart.

—Rob Morris.

THE SPECTRAL DOG.

Strange Story Told by an Old Railroad Fireman.

New York Tribune.

The *Tribune* reporter was sitting on one of the seats on the Battery promenade recently when a well dressed woman passed leading by a strap a snow-white Spitz dog. A man dressed in the rough garb of a laborer sat on the seat next to the reporter, smoking a short stemmed cob pipe.

"Talking about strange things," said the laborer, nudging the news gather, "I never see a white dog but what I call up a strange experience I had while firing on the Pennsylvania railroad ten years ago. I was in the cab with Tommy Burns, one of the best engineers in the company's service, and our run was between Jersey City and Philadelphia. We left Jersey City at 9 o'clock one Saturday evening, pulling a long train of passenger coaches and three Pullmans. The cars were all full and we had the right of way, making no stops except at Market street, Newark, and Trenton. We rolled along all right over the Hackensack meadows and after we left Newark we struck a sixty miles an hour pace, and watched the telegraph poles flash by till they looked like the teeth of a fine tooth comb.

"We struck the plain at Princeton Junction when Burns, who was looking out of the cab window, says to me:

"Look-a-here, Jack! There is a white dog runnin' alongside what's been followin' us for five minutes and blamed if he ain't keepin' up to the injine. Look at him."

"I was shoveling coal in the furnace at the time and the heat was blistering my eye balls in their sockets. It took me some time after gazing out of the window before I could make out the dog. Finally I saw

him skimming along like a swallow. Now in the glare from the window he could be plainly seen, then he would get out in the line of the darkness and we would lose sight of him. But he would be sure to show up again in a few minutes. Ditches, cuts and sharp bends, it was all the same, that white dog stuck beside the cab as steady as its shadow. Burns and I couldn't make it out. First we thought our eyesight was deceiving us, for the awful heat from the furnace, the sharp wind or something else, or all these things put together, is terribly trying on one's eyes who has to use them in an engine cab. The sight gets blurred and cloudy, and sometimes you see double, and sometimes you don't see half. Well, Burns and I thought at first we were fooled by our eyes and there couldn't be any dog. But mile after mile that white dog was alongside.

"Jack," says Burns all at once, 'this is more'n I kin stand. If our eyes an't mused up there's something wrong somewhere. I am goin' to stop her.'

"Sure enough he stopped and we both got off the cab. The conductor came running up and wanted to know what in the blue blazes was the matter. We told him about the white dog running alongside the engine, and we looked about to show him the blamed animal. But to our surprise there was no dog to be seen, and hunt high and low we could not find him. The conductor laughed at us, and Burns and I got aboard again thinking that after all our eyes might have fooled us. Burns pulled back the throttle and we started on slowly. There was a curved cut just ahead of us. Fifty yards from it, before the wheels had fairly begun to revolve good, the headlight flashing on the track before us showed us a rock that must have weighed two tons on our track. We stopped the engine with the cow-catcher not twelve inches from the stone, which, loosened by rains, had rolled down from the bank. Had we not stopped on account of that white dog we would have struck it on full headway, and you can see what that would have meant. I got shaky soon after that and resigned, and the very mention of a white dog, much less the sight of one, brings that strange ride back to me.

AN ECONOMICAL WEAPON.

New York Sun.

If your neighbors' cat arouses you at midnight, throw your wife's silver-backed hand-glass or your patent leather shoes at the animal, but do not be so foolish as to throw coal at this season of the year.

AND IT'S JUST AS WELL, GENERALLY.

Harper's Bazar.

The great trouble with those who go to the bad is that they do not think to provide themselves with a return ticket.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

FEBRUARY, 1889.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., February 1, 1889. }

Assessment Notice for February.

ASSESSMENT NO. 1, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled to all the benefits of the Order, viz.:

CLAIM No. 1. John Frame, of Minneapolis Lodge, No. 270, died of Inflammation of the Lungs, June 4th, 1888.

CLAIM No. 2. J. J. Keith, of Bayou City Lodge, No. 146, was killed by Railroad Accident, August 4th, 1888.

CLAIM No. 3. Frank C. Weyl, of Pride of the West Lodge, No. 6, suffered the Amputation of a Leg, August 15th, 1888.

CLAIM No. 4. J. A. Barkley, of John Hickey Lodge, No. 266, died of Consumption, September 5th, 1888.

CLAIM No. 5. E. M. Risk, of Jackson Lodge, No. 274, died of Typhoid Fever, September 8th, 1888.

CLAIM No. 6. Wm. Brandon, of Rose City Lodge, No. 45, died of Malarial Fever, September 10th, 1888.

CLAIM No. 7. H. M. Tomlinson, of Taylor Lodge, No. 175, was killed by Railroad Accident, September 14th, 1888.

CLAIM No. 8. John T. Foley, of Villa Park Lodge, No. 303, was declared totally disabled with injury to his Hand, October 1st, 1888.

CLAIM No. 9. John Getkin, of Mountain Grove Lodge, 324, was declared totally disabled with injury to his Hand, October 1st, 1888.

CLAIM No. 10. C. H. Grimes, of Empire Lodge, No. 212, was declared totally disabled with Loss of Eyesight, October 1st, 1888.

CLAIM No. 11. E. H. Noble, of Cloud City Lodge, No. 196, was declared totally disabled with injury to Leg, October 1st, 1888.

CLAIM No. 12. Simon Evans, of Triumphant Lodge, No. 47, was declared totally disabled with injury to Hand, October 1st, 1888.

CLAIM No. 13. John P. May, of Orphan's Hope Lodge, No. 319, died of Typhoid Fever, October 3d, 1888.

CLAIM No. 14. A. S. Craik, of Prairie Lodge, No. 170, was killed by Railroad Accident, October 11th, 1888.

CLAIM No. 15. Wm. Field, of Silver Mountain Lodge, No. 327, suffered the Loss of both Arms, October 24th, 1888.

CLAIM No. 16. John McManus, of West End Lodge, No. 18, died of Heart Disease, October 25th, 1888.

CLAIM No. 17. J. G. Elkins, of Hinton Lodge, No. 236, was killed by Railroad Accident, October 27th, 1888.

CLAIM No. 18. James Hogan, of Deer Park Lodge No. 1, died of Consumption, November 2d, 1888.

CLAIM No. 19. Edward Watts, of Border Lodge, No. 32, died of Inflammation of Bowels, November 3d, 1888.

CLAIM No. 20. Thos. McShane, of Northern Light Lodge, No. 127, died of Consumption, November 3d, 1888.

CLAIM No. 21. Thos. McDermott, of Hercules Lodge, No. 63, was declared Totally Disabled with Consumption, November 5th, 1888.

CLAIM No. 22. J. D. Bradshaw, of Royal Gorge Lodge, No. 19, was killed by Railroad Accident, November 8th, 1888.

CLAIM No. 23. C. R. Whelan, of S. S. Merrill Lodge, No. 188, died of Pneumonia, November 20th, 1888.

CLAIM No. 24. E. J. Wiggins, of Harrisburgh Lodge, No. 174, died of Heart Disease, November, 23d, 1888.

CLAIM No. 25. John Horn, of Eureka Lodge, No. 14, was declared Totally Disabled with Chronic Dysentery, November 24th, 1888.

NOTE.—Claims 8, 9, 10, 11 and 12 were ordered allowed by the First Biennial Convention on filing of the proper papers.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls February 1st, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than February 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours, fraternally,
EUGENE V. DEBS, G. S. & T.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., January 1, 1888.

Beneficiary Statement.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending December 31, 1888:

 Mrs. Charles Henk Treasurer

Railroad Square Patent VENTILATED DINNER PAIL

This cut shows our Ventilated Pail with its telescopic top, lock handle and large coffee flask. As this Pail will keep cooked food fresh a long time—is of large capacity and well made of good tin, every railroad man will find it the best Pail made for his use.

Size of No. 2 Pail is 9½ in. long by 5½ in. wide by 9½ in. high when locked up. To introduce these Pails until further notice, we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents.

REARDON & ENNIS,

Sole Manufacturers, Troy, New York.

NOTICE

—TO—

FIREMEN AND RAILROAD MEN.

The undersigned respectfully gives notice that he has opened a place of business at the location below, for the sale of Watches, Emblems, Charms, Pins, Rings and Chains for all Railway Orders, of which he will make a specialty. He is also prepared to furnish anything desired in the line of Diamonds, Precious Stones, Ladies' Watches, Chains, Sets, Bracelets, Locketts, Gold Pens, Pencils, Buttons, Studs, Solid and Silver Plated Goods, Clocks, Bronzes, Opera Glasses, Gold Headed Canes, &c., in fact anything in the Jewelry Line, all of which will be warranted the best and at prices defying competition. Engravings and prices for any of the above articles will be furnished on application, and a number of samples sent C. O. D. to the nearest express office for selection. Hoping to secure a liberal portion of your trade,

I am respectfully yours,

JOHN J. McCRANE,
The Brotherhoods' Jeweler,
48 and 50 Maiden Lane,
New York City, N. Y.

H. H. WESTINGHOUSE, General Manager.

THE WESTINGHOUSE AIR BRAKE CO.

PITTSBURGH, PA., U. S. A.

MANUFACTURERS OF THE

Westinghouse Automatic Brake.

THE WESTINGHOUSE AUTOMATIC BRAKE is now in use on 15,000 engines and 125,000 cars in all parts of the world. This includes 45,000 freight cars.

THE WESTINGHOUSE AUTOMATIC BRAKE is the only continuous brake that has been successfully used on freight trains.

THE AUTOMATIC BRAKE will, in consequence of its quick application, stop a train in the least possible distance.

THE AUTOMATIC BRAKE on freight trains, as in the passenger service, applies itself instantly to all parts of the train in the event of the train breaking into two or more parts, a feature of great importance in view of the statistics published in the *Railroad Gazette*, which show conclusively that a majority of the collisions are caused by the breaking in two of trains. (See *Railroad Gazette*, Feb. 12, 1886, page 113.)

THE AUTOMATIC BRAKE also applies itself to every car in the train in the event of any accident to the brake apparatus of such a nature that it would render any non-automatic continuous brake inoperative.

THE AUTOMATIC BRAKE can be applied from the rear, or from any portion of the train, if desired.

THE AUTOMATIC BRAKE will effect an increase of at least twenty five per cent. in the efficient value of freight rolling stock, owing to the quicker time that can be made on the road, and the avoiding of delay at stations and sidings. Freight trains carrying perishable goods are being daily run on passenger schedules.

THE AUTOMATIC BRAKE, applied to freight cars, avoids the flattening of wheels and effects a yearly saving, in this item alone, nearly equal to the first cost of the apparatus.

THE AUTOMATIC BRAKE will prevent a greater part of the accidents to freight trains which form so large an item of expense in railway management.

THE AUTOMATIC BRAKE will save employes from the danger and exposure to which they are now subjected, having to ride on the tops of cars in cold and stormy weather, and often sacrificing their lives in the discharge of their duties.

THE AUTOMATIC BRAKE is simple in construction and operation, and cheaply maintained, the working parts being combined in one piece of mechanism.

THE AUTOMATIC BRAKE is not an experiment, but is the result of many years of practical experience, and its capabilities are well known to all railway managers.

WANTED, EVERY MAN

Keystone Splasher.

saving your finger nails and temper.

They are both good and useful articles and will serve to remind you that when you want a new Watch Case to buy one of the following brands, and you may feel satisfied that you have the very best that is made.

MARCH, 1889.

ALLEGIANCE TO PRINCIPLE.

To men of well developed, healthy, vigorous minds, in which noble ambitions take root and thrive, where generous feelings and kindly sympathies hold sway, there is always to be found the tenderest regard for home, for youthful scenes, and memory treasures nothing so fruitful of felicity as "The orchard, the meadow and deep tangled wildwood,
And every loved object their infancy knew."

It does not matter that they have traveled, in their own and in foreign lands. It does not matter that fortune has smiled and that they have become rich, and exchanged the cottage for the palatial residence; it does not matter that they have formed new associations and have changed surroundings, they still cherish "with fond recollection" "the old oaken bucket that hung in the well," and "the old family Bible that laid on the stand;" they still recall with delight

the old school house on the hill or in the valley, and often early associates pass in review, and especially is it true that their comrades, those with whom they were associated in their early struggles to advance, whose companionship and friendship they enjoyed and upon which they leaned, are never forgotten. There is no nobler trait in man's character than this keeping fresh and green throughout all the vicissitudes of life, fond memories of home, of kindred and comrades. To forget them, to turn from them, to neglect or disown them, is universally regarded as apostasy in its darkest and most repulsive form. It takes the form of ingratitude, and Shakespere says:

"I hate ingratitude more in a man
Than lying, vainness, babbling, drunkenness,
Or any taint of vice, whose strong corruption
Inhabits our frail blood."

This fealty to early friendships and associations, this unflagging and unchanging attachment to comrades, is universally regarded among all honorable men as convincing testimony of a noble, generous, courageous nature, and the absence of it becomes equally convincing, that the victim, whatever may be his surroundings, is to be numbered among the world's unfortunates.

It should be understood that our remarks are not intended to apply to a class of men whose childhood and young manhood was bereft of examples and associations such as inspire noble ambitions, in whose memories there are few if any pictures, the contemplation of which are fruitful of felicities, and

who in mature manhood remember only scenes and associations calculated to deflect them from pathways of rectitude and usefulness. Of such men it is not to be expected that they will supply the world with examples of unwavering devotion to things of good report, and yet it may be said that instances are numerous in which noble examples of courage and fidelity to obligation have won from the ranks of men whose early life was clouded by the misfortune of neglect and examples of vice, and given them world-wide fame as the champions of principles which are admitted to be the bulwarks of society.

As a general proposition, and in the highest degree commendatory, men are inclined to regard their own country, their own homes, the school, the college where they were educated, the church where they worship, and so on to the end of the chapter, as the best, and on all proper occasions they do not hesitate to give their reasons for their preferences. No man ever lost character or prestige by championing such convictions, on the contrary, in the estimation of men of correct sensibility, the man who asserts his allegiance to home, country, church, school and friends, to all institutions that have helped him to advance or held him from retrograding, is esteemed virtuous and courageous. He at once takes a position as one who, however fiercely the storm may beat, however sanguinary may be the battle, can be trusted. He will not flinch. He will not tamely surrender. He will not abandon his cause nor his comrades. He can neither be bribed nor intimidated. He will never sacrifice his independence nor his self-respect. He admires friendship but detests the schemes of the flatterer. He knows his duty and dare perform it. He will not apostatize. He is neither traitor, deserter nor bounty-jumper, and he has unmitigated scorn for the man or set of men who by any mean artifice seek to humiliate him in his own estimation or in the estimation of others by "going back on his friends and associates."

To illustrate, there was established in the year 1873 a Brotherhood of Locomotive Firemen. What of it? What of its foundation, its growth, its prosperity and present

position? Why was it organized? To answer such questions would require more space than we have at our command, nor is it required that we should enter into details. Go back fifteen years, start with Lodge No. 1, and then march with the Brotherhood in its continental journeyings until you are the guest of Lodge No. 400, and you can answer our interrogatives. It will be seen why the Brotherhood was organized, and the measure of its growth and prosperity will be comprehended. Has it made mistakes? Certainly, and as certainly there are dark spots on the shining disk of the Sun. Has it had defeats? Often. Vanquished? Never. Victorious? In the history of Brotherhoods nothing more resplendent can be found. Its career is one splendid victory. Has it met every obligation? The records show that it has not only met every obligation, but that in the spirit of fraternal forgiveness it has exceeded its obligations. It has taken delinquents by the hand and lifted them into fellowship, and poured its treasures by thousands to make joyous disconsolate widows and orphans. We could write in eulogistic phrase for hours, and tell the truth, of the Brotherhood of Locomotive Firemen. But our purpose is to ask the membership of our powerful and prosperous Brotherhood if there is any other Brotherhood in existence that has a more resplendent record, of duty done, good work performed, of obligations met? If so, what Brotherhood can make the boast?

To be more direct, is there a Brotherhood of railroad employes that has a better record than the Brotherhood of Locomotive Firemen? If so, name it. We are not aware of its existence. We have no adverse criticisms to offer on any Brotherhood of railroad employes. This *Magazine* has demonstrated in the past that it is the friend of them all. It seeks to bind them in the closer bonds of federation, for the good of all. We simply assert that the Brotherhood of Locomotive Firemen is the peer of the best and abreast of the most advanced. Is it a question of brains? Is it a question of courage? Is it a question of fidelity to obligation? Let the questions multiply until they include all things for which manly

men should strive, and the Brotherhood of Locomotive Firemen, it will be found, is not required to take a back seat—and yet it is found that the Brotherhood of Locomotive Engineers assumes to be the superior Brotherhood, and that there may be no mistake upon the subject, places two laws upon its statute books, at once an insult and a menace to the Brotherhood of Locomotive Firemen, and then with an effrontery that defies exaggeration, solicits members of the Brotherhood of Locomotive Firemen, men who for years have had locomotive firemen for their associates, for their comrades, with whom they have associated in the Lodge room, and around the counsel boards of the Order—to apostatize, to strip themselves naked of independence, of self-respect, disown their brothers and trample upon oath and obligation that they may be eligible to membership in the Brotherhood of Locomotive Engineers. Why? Wherefore? What is to be gained by this apostacy? No man answers the questions. The Brotherhood of Locomotive Engineers is as silent as a tombstone. Its Grand Chief has never ventured a reason or an explanation. The organ of the order wisely remains silent. Are the engineers better men than the firemen? Have they more brains, more courage, more character, more of anything that entitles them to respect? To answer such questions, let it be said that the entire membership were but yesterday locomotive firemen—the knights of the pick and scoop. The Brotherhood of Locomotive Firemen made them engineers. They are bone of its bone and flesh of its flesh—and yet, this Brotherhood of Locomotive Engineers, grasping its boot straps, and with haughty, disdainful, consequential airs, seeks to lift itself into such prominence that no engineer in its charmed circle, who is a member of the Brotherhood of Locomotive Firemen, can represent his Division in the Grand Councils of the Order, and as if that was not the climax of insult and unmitigated insolence, it further enacts that no engineer, a member of the Brotherhood of Locomotive Firemen, shall ever become a member of the Brotherhood of Locomotive Engineers, until he has renounced his parent Brotherhood, cleansed himself of the odium of being a Brotherhood fireman.

Having done this, having thus committed moral suicide, having apostatized, and gone forth like Cain with a mark upon his brow, the Brotherhood of Locomotive Engineers if they choose may take him in. And suppose he is taken into that Brotherhood, what does he gain? In what way is he benefitted? No one knows and no one attempts to explain. Nor is there any superior advantage to be secured, or if it can be shown an advantage does accrue, how will it appear contrasted with the sacrifices made to secure it?

It is not surprising that the Brotherhood of Locomotive Engineers seek to make the Brotherhood of Locomotive Firemen its recruiting camp, its breeding pen, but it would be surprising if Locomotive Firemen, members of the Brotherhood, did not at once, and in manly emphasis, rebuke the spirit which prompted the enactment of laws by the Brotherhood of Locomotive Engineers, than which no greater indignity could be offered them. And just here it should be said that there are thousands of Engineers who view the subject as does the *Locomotive Firemen's Magazine*. That ultimately the odious laws to which we have referred will be repealed we do not doubt, but while they stain the statute books of the B. of L. E. no engineer, a member of the B. of L. F. should seek to enter the Engineers' Brotherhood. He should not permit himself to be cajoled nor intimidated, and any attempt of that character should be met with a firmness and sternness that would be so convincing that the party trying it on would realize that the Brotherhood of Locomotive Firemen, and each member of the Order, proposes in the future not to yield to arrogance nor to retreat one inch from the high ground it has taken, that when reciprocity is disdainfully declined, dignified non-intercourse will be maintained.

THE Congo country in Africa is to have a railroad within the next two or three years, extending from the coast 235 miles, the terminal point being beyond the cataracts of the Congo river. The railroad makes dark places luminous, and the *terra incognita* business is about played out in Africa.

LABOR AS A "COMMODITY."

For some months past the subject of "tariff reform" or tax reform has been going forward in and out of Congress, and the agitation is likely to continue indefinitely. In this discussion we hear much about the importance of admitting "free of duty" or tax, certain commodities, raw materials, because such a policy would lessen the cost of manufactured goods and enable the United States to compete with other nations in the markets of the world. Such a policy, it is boldly stated, would be of incalculable benefit to the workmen of the country because, by opening new markets for the products of American factories, the demand for labor would be increased and wages would advance, and as new markets would be found for our surplus products, overproduction would disappear and workmen would have continual employment.

Those who are watching the debates in Congress, and the discussions going forward in the press of the country, have noticed that labor comes in for special notice, and that great prominence is given the interests of wage-workers. This, to say the least of it, is a cheering indication. It is the recognition of fundamental facts, which advanced thinkers believe will result, ultimately, to the great advantage of workmen and necessarily to the welfare of the country.

But our purpose at this writing, is not to discuss "tariff reform" nor the importance of extending the free list of imported articles. Such topics may engage our attention at another time. For the present we desire to call the attention of our readers to the fact that in the Congress of the United States, "labor" is designated as a "commodity," and this is done by a statesman who professes to be the champion of the interests of laboring men. A member of Congress in a speech said: [Italics are ours.—EDITOR.]

What is labor? Why is it that capitalists construct mills, purchase materials, and employ laborers to work the same up? It is because by combining the materials and the labor he produces something for which there is a market and which he can sell at a profit. When he sells the product he sells the *materials and the labor that he has purchased* and sells both at a profit. By combining the materials and labor he has a product for which there is a demand. If there is no demand for his product, if the market has

been supplied, he at once closes his factory, stops the purchase of materials, and discharges his employes. *Labor is as much a commodity, selling in the market, as the materials to be worked up.* If there is a great demand for the product, there is a great demand for the materials and for the labor necessary to manufacture it. If the price of materials goes up, wages go up. *If labor is but a commodity selling in the market, its price is regulated solely by supply and demand!* If the demand is great, wages will go up; if it is small, wages will go down. It requires no argument to convince laboring men that in a community where a large number are out of work and seeking employment that wages will be low and work hard to obtain. Competition will force them down to the lowest standard of living in spite of organization. But when there is work for all, when two employers are after one laborer instead of two laborers being after one employer, wages will be high.

The distinguished gentleman asked "What is labor?" and he answered his interrogatory by saying, "Labor is as much a commodity, selling in the market, as the materials to be worked up." We confess our inability to fitly characterize such a declaration. It is a sentence in which words are not the signs of correct ideas—or ideas of any sort. It is jargon. Nations have commodities. The United States boasts of an extended list—iron, coal, cotton, lumber, tar and turpentine—commodities of forest, field and mine. We import commodities, raw materials, wool, jute, hair and hides. And now we have the announcement made in Congress, that "labor is a commodity," as much a commodity as the "materials" workmen are required to "work up." If so, manifestly, labor must take its chances with other materials, pig iron and wool, raw hides and so on to the end of the list. The labor market is like any other market. Has it come to this? The subject is worthy of the severest analysis. The distinguished Congressman asks, "what is labor?" and says "it is as much a commodity as the materials to be worked up." Is that true? A manufacturer purchases five hundred bales of cotton. It is a commodity. He concludes to store it for a time till the price of goods advance. He insures his "commodity" and closes his factory. His cotton "commodity rests." It is sheltered and watched. It neither gets sick nor hungry, it simply waits a favorable change in the market, and then the owner reaps his profits.

Just outside of the factory is "labor," which the distinguished Congressman, the professed friend of the wage-worker says "is as much a commodity" as the cotton,

the "material" and the labor occupy, in the opinion of the Congressman, precisely the same position, and in legislation, are to be treated as identical; and this vaunting statesman, this champion of labor says: "I am willing to answer to that great body of intelligent wage-workers that I have the honor to represent, as to whether I have been true to their interests." Is it to the interests of wage-workers to be degraded to the level of raw materials? "What is labor?" asks this "representative" of a great "body of intelligent wage-workers," and he tells them they are as much "commodities" as the "materials they work up." We ask what is labor? and we tell this half-fledged, illy-informed congressman, this pseudo statesman, that labor is not a commodity. We tell him that it is not bought and sold in the markets of the United States like the raw materials of commerce. It was so once. In a large section of the United States there was a time when labor was bought and sold. There were labor-blocks and labor-pens. There were millions invested in labor. But to own labor, to make it a "material," a chattel, to offer it in the market to be bought and sold as a "commodity, is in the United States of America a thing of the past, and it is not in the power of Congress to degrade labor to a commodity. It has been the monstrous curse of the world, of all ages, to degrade labor to the level of a commodity, a material, a chattel, to be bought and sold, and the price of it regulated in the market as any "materials to be worked up." It has been thought, it has been affirmed, that in the United States of America, the time had come, when labor had been redeemed—emancipated, from the dishonor, the disgrace and humiliation of a "commodity," to be bought at private sale, or at auction, as commodities are disposed of, but according to the declarations of a latter day statesman, a man who puts himself forward as a student of political economy, who under all circumstances is to secure the workingman's vote, labor occupies the same level as "any commodity selling in the market, as much a material as anything to be "worked up." If this is true, if it has in it one element of truth, then labor has not moved a step in advance since the slaves

of the Pharoahs built the pyramids. Labor is still a chattel, a "commodity," a raw material to be "worked up." It is an article of commerce. It belongs to the nations that produce it. It may be shipped and consigned, imported and exported, and that this is the idea of certain corporations is easily demonstrated. But it is not the American idea. It is not the conception of men who are capable of comprehending the logic of events, of facts, of reason or of righteousness. To class men, who announce as a fact, that labor is a "commodity," as much so as guano, as hair and hides, is to do violence to common sense. It makes the term "commodity," everlastingly odious. What is a commodity? It is something tangible, palpable and substantial. It can be handled—analyzed—resolved into component parts. It can be put into barrels or bales, or it can be shipped in bulk. Is labor the same; is it "as much a commodity as the materials to be worked up." Can the distinguished congressman, who degrades labor to a "commodity" analyze it? Can he analyze fire or light? If the distinguished Congressman whose remarks we discuss should call upon the head chemist and request him to analyze any commodity known to commerce, he would be listened to respectfully, and the task would be performed, but if he were to ask the chemist to analyze labor, he would be regarded as a person who ought to be in an insane asylum rather than in congress. If the chemist were disposed to test the hallucination which had taken possession of the congressman, he might tell him to bring on his "labor commodity," and the congressman would doubtless introduce one of the "great body of intelligent wage-workers" he has the "honor to represent." There stands the congressman and beside him the "commodity," "as much a commodity selling in the market" as pig-iron or any other "material to be worked up." The chemist possibly tells the congressman that he "is a crank." If the congressman insists upon having his labor commodity analyzed, it is not difficult to guess what would be the result. In the first place it is rational to conjecture that the "commodity" itself, or himself, or herself would object. It might

result in a warm discussion. The "intelligent wage-worker" might say "to analyze labor you analyze me. Here I am, body, life, soul, spirit, skill, thought, ambition, aspiration and imagination. Here I am, created a little lower than God Himself, the original worker, laborer and creator," and addressing the congressman, says, "do you rank me with a commodity?" "That is just what he does" says the chemist. "I am to extract the labor from you, cut you up into chunks, pound them and grind them, subject them to intense heat to find 'labor,' the 'commodity,' that is like any other commodity that sells in the market, that must go up or down, according to 'supply and demand.' If the supply is small, then labor, wage-workers, will be fat, well fed, well clothed, happy and contented, the 'commodity' will be in demand, otherwise the 'commodity' will be idle, it will be clothed in rags, it will be hungry and starve and die, or it will commit crime and go to prison, or have its neck broken with a halter. I confess, I cannot get the labor out of the laborer—out of the 'intelligent wage-worker,' and the congressman must dispose of his 'commodity' elsewhere. My apparatus is not constructed to analyze labor, it is a commodity unknown to modern chemistry or ancient alchemy."

According to this modern statesman, this American servant of the people, this would-be savant, this *avant courier* of the wage-workers' millenium, labor is a commodity like any raw material known to commerce or to manufacturers, and its doom is irrevocably fixed. Labor means the laborer, and we are told that labor must take its chances with other commodities, and that in spite of organization wages will be high or low as supply and demand may determine. If this is true, God pity the laborer in the United States of America. There is no help for him, reduced to a "commodity," degraded to a chattel. Wage-workers, with bowed heads may contemplate the inevitable. Their condition is worse, far worse than that of the beasts of the field.

Does the Congressman whose words we have quoted, represent the American idea? Do wage-workers say amen? The American idea is, that in organization and federation

legislation can be had that will promote the interests of wage-workers. It is not the American idea that labor is a commodity. It is rapidly becoming the American idea that to give all employment the hours for labor shall be reduced. The wage-workers of the United States are the strength and glory of the nation, and when any one in Congress of the United States degrades labor to a "commodity," classes it with raw materials, a blunder of the most vicious character is committed, and it behooves workmen in casting their ballots, to guard against elevating men to positions of power and influence who regard labor as much of a commodity as any raw material, and who proclaim, that the organization of workingmen for their protection is in vain.

.....

WE have on our table a romance, entitled "Broken Lives," from the pen of our fellow-townsmen Hon. Cyrus F. McNutt. Judge McNutt is one of the most distinguished lawyers of Indiana, a man of profound research in jurisprudence. He is a close reasoner, a master of logic and of rhetoric, and is as justly renowned for his fervid eloquence. The judge has a brilliant fancy and an imagination, which, when given full play, makes his public utterances, when the occasion demands it, a feast of reason and a flow of soul. It is not surprising, therefore, that the author of "Broken Lives" occasionally turns away from law books, that he may revel in congenial fancies, and beguile his leisure hours with contributions for the pleasure of those who are never more delighted than when treading labyrinthian pathways of romance. In "Broken Lives" Judge McNutt, with an opulence of light and shadow, contributes to the delectation of that class of readers. We have not the space at our command to review the book, but this we can say, the interest increases as the reader proceeds, and satisfaction is found only when the last page is finished.

We most heartily congratulate the author upon his success, and we do our readers a favor by urging them to obtain a copy, and for this, we know they will feel under many obligations to the *Magazine*.

THE QUESTION OF POLICY.

It is not possible to conceive of any organization of men without a policy, a settled method of administering its affairs. All organizations of men have a purpose in view, there are certain objects to be accomplished, certain ends and aims which are determined upon from the first, and which are always made prominent, and a failure to maintain them results in the collapse of the organization, be it what it may.

There are numerous labor organizations in the country. Each one has a policy, a supreme purpose in view, special ends are contemplated. There is a central idea around which all others revolve. In the process of growth, evolution, with changed conditions and circumstances, modifications or additions often become necessary, but the original policy and purpose, instead of being eliminated, is strengthened. Such instances are constantly occurring, but, it will be observed, that whatever may be the changes required by conditions and circumstances, the organization still maintains its policy, because, without a sharply defined method of administering its affairs, the organization itself would disappear.

Having said this much in a general way we descend to particulars, and remark that the Brotherhood of Locomotive Firemen has had, from the first, a policy. It has had a constitution and laws, defining purposes, ends and aims. and though from time to time constitution and laws have undergone changes, it has only been done to meet exigencies resulting from growth, and to enable the Brotherhood to more fully meet the responsibilities which such changed conditions imposed.

From the first, the purpose of the Brotherhood of Locomotive Firemen has been to maintain an independent, a self-respecting and a self-sustaining organization. Its ambitions have been healthy. It has not been an organization of bravado and bluster, of demagogism, nor of arrogance, of presumption nor lofty assumption. It has put on no lordly, disdainful airs. It has not been dogmatic, nor has it assumed magisterial superiority. The Brotherhood of Locomotive Firemen, believing in the dignity of labor and the equality of men, has, while guard-

ing its own rank and station, ever been ready to recognize other labor organizations and award them, on all occasions, their rightful meed of praise.

The policy of the Brotherhood of Locomotive Firemen has been to administer its affairs in such a way as to challenge public respect, not by the vulgar arts of the sycophant, but by manliness. It has the courage to assert its rights and to maintain them in the face of overwhelming power, and when defeat has come, it has not been demoralized, nor has it exhibited a childish glee when victory has perched upon its banners. It has moved along in its chosen pathway, and, whether engaged in solving problems or in removing obstacles, it has proved itself superior to despondency and equal to emergencies.

The policy of the Brotherhood of Locomotive Firemen has been peaceful, but not to the extent of the sacrifice of principle, honor, right and justice. It would not have peace at the price of degradation. It would not be humiliated without protest. It has known its rights and it has dared to assert them. It may have made mistakes. The same is true of Moses, but they have been mistakes of method rather than demands.

This question of policy is one that has been up for debate in all labor organizations, and of necessity, in the Brotherhood of Locomotive Engineers. In the B. of L. E. the idea of government has become repugnant by virtue of special laws one which the Brotherhood of Locomotive Firemen not only has a right to discuss, but which it is in duty bound to ventilate, because its laws in more than one instance relate directly to members of the Brotherhood of Locomotive Firemen. As a general proposition, it will be admitted that the B. of L. E. has the right to enact such laws as it may choose. This being admitted, it is equally clear, that other labor organizations may entertain such opinions of the laws so enacted, as they choose. But the relations existing between the B. of L. F. and the B. of L. E. are of such a character, that certain laws enacted by the B. of L. E. are productive of sentiments in the minds of Locomotive Firemen, that are not aroused in the minds of the members of other labor organizations. As a result, when

the B. of L. E. enacts a law which is at once an assault upon the B. of L. F. and is an insult to its members, the B. of L. F. and every member of the Brotherhood, has a right and is in duty bound to resent the insult. To do less is self-imposed degradation. To do less, is to invite humiliation in the eyes of all honorable, self-respecting men.

The policy of the B. of L. E., voiced by its odious laws, is to offer to the B. of L. F. an unmitigated affront, couched in language of deliberate insolence. It is an unparalleled indignity. There is neither palliation nor excuse for the outrage. Under such circumstances, the B. of L. E. will doubtless, with a sneer, ask locomotive firemen, "What are you going to do about it?" The question suggests another question, what can self-respecting members of the B. of L. F. do about it? We answer, several things:

First, Members of the B. of L. F. can submit tamely to the insult, they can accept the indignity with bowed heads, downcast eyes and dumb tongues. They cannot change the policy of the B. of L. E. but they can accept it with all its abundance of contumely and contempt for their Brotherhood.

Second, Members of the B. of L. F. can take an inventory of all their resources of dignity, self-respect, independence, consciousness of equality, and let the B. of L. E. severely alone, and thus match a policy of insult and arrogance, with a policy of manly independence and courage that disdains humiliation.

Third, Members of the B. of L. F. can peruse the history of their own organization from its first to the organization of the last Lodge in its continental jurisdiction, and find on every page instances of fidelity to the interests of the B. of L. E., culminating in the C., B. & Q. strike, which ought, in the very nature of things, to have been productive, on the part of the B. of L. E. of a policy of respect and confidence toward the B. of L. F., instead of a policy of contempt and ostracism, such as disgraces its statute books.

We have outlined the policy which distinguishes the B. of L. F. and that which characterizes the B. of L. E. It is not the province of this *Magazine* to demand of the B. of L. E. that it shall change its policy towards the B. of L. F. and repeal the laws

which it has enacted and which are a standing insult to the B. of L. F., but it is the province of this *Magazine* to do all in its power to impress upon Brotherhood firemen, and all members of the B. of L. F. the importance of permitting the B. of L. E. to go it alone. To permit it to pursue its policy of ostracism to its heart's content, while they in the spirit of lofty independence rally around the flag of the B. of L. F. which now, as in the beginning, symbolizes independence, and upon which there is no stain of arrogance, and which does not demand of those who march under its ample folds either apostasy, or treason.

OVERWORK AND RAILROAD ACCIDENTS.

Some time ago we commented upon the findings of a commission which investigated the causes of an English railroad wreck, it having reported that, previous to the wreck, the engineers of the trains which collided had been on duty nearly eighteen hours, and that, in its opinion, these unreasonable hours of service were the chief cause of the collision. But by the evidence taken before the Railway Commissioners, regarding a recent wreck at Creston Is., on the Burlington road, it is shown that the conductor of the wrecked freight train had no sleep for *five* hours, and that he objected to going out without rest. No management of a railroad company needs to be informed that there is no security against fatal mistakes being made by men who are treated in this way, and it is a case of sheer recklessness, and if the purely selfish considerations involved are not sufficient to prevent such gross imposition upon railway employes, then the public should, for its own protection, secure the enactment of laws inflicting severe penalties for cases of such utter disregard for their safety. In the case of the English accident we had the pleasure of announcing, shortly afterwards, that it had led to an order limiting the number of hours of continuous service to something like a reasonable time, on that road. It is to be hoped that a similar effect may be brought about by this one, but if not, then the law-makers should attend to it for the protection of the traveling public.—*American Machinist*.

In railroad management, no more important questions arise or demand investigation than those which relate to *preventable* accidents. The frightful loss of life, and if possible, the still more terrible sum total of the maimed, the result of railroad accidents which annually occur, creates and spreads alarm. Many of these accidents are known to be preventable, and of these not a few, there are cogent reasons for believing, can be traced to the overwork of men in charge of trains, engineers, firemen, switchmen, conductors, brakemen and train dispatchers.

This *Magazine*, more than two years ago, in discussing a blood-curdling accident on the Pennsylvania railroad, caused by "in-

comprehensible absent-mindedness of a reliable signal operator," put upon record views, which the *American Machinist* fully indorses. We held that the signal operator was overworked. In the February number, 1886, of this *Magazine*, we said:

"Physical endurance is one thing, mental endurance is quite another and a far more important matter. The mind to be watchful and on the alert, must not be overtasked. Engineers, firemen, brakemen, conductors, switchmen, train dispatchers and signal operators, are, if trustworthy, more or less constantly subjected to mental strains as the result of responsibilities. To require them to work an improper number of hours, has resulted in disasters in the past, and will result in calamities in the future. * * * * No amount of fidelity to trusts, no capabilities, however exalted, can withstand the strain of overwork, and just in proportion as the employé is overworked, just in that proportion will he feel the weight of his responsibilities and the increased strain upon his mental faculties."

Again, in January, 1887, this *Magazine* called attention to the fact, and remarked "that the moment the mind and body of a trainman is overtasked, the moment of danger has been reached, and thereafter the danger increases in geometric progression."

* * * "Safety demands that trainmen should have sound minds and healthy bodies, and that neither mind nor body should be subjected to fatigue which to any extent involves forgetfulness of responsibilities or incapacity to meet them."

We are glad to see that the important subject is being discussed, and that a demand is being made for legislative enactment, if no other remedy is found. It is a subject of vital interest to the travelling public, and one which the press of the country could discuss with eminent propriety. There are accidents which neither care nor foresight can prevent, and when they occur the public is quick to render a verdict of "not guilty," and place the responsibility upon Providence, and it is quite as ready to return a verdict of guilty when the accident belongs to the preventable class; and when it results from the overwork of trainmen, the expressions of indignation should

neither be moderate nor withheld. The idea of a conductor being on duty fifty hours without sleep, as in the case of the Creston, Iowa, wreck, almost defies belief, and though an extreme case, illustrates the fact that the dangers from overwork, to a greater or less extent, lurk on all the railroads of this continent. That a remedy is demanded requires no argument. That it can be much longer delayed will not be believed by those who study the drift of public sentiment.

THE amount of law there is in the United States is simply astounding, and the demand is ceaseless for more laws; and Congress and Legislatures are grinding them out by the mile. At the rate the country is now going forward in law-making there will be a National or a State statute for everything conceivable. The willingness on the part of law-makers to exhibit their ignorance is arousing to action every crank in the land, and laws starting out with dogs are reaching for archangelism. Little is left for the people to determine for themselves, and yet there is not the slightest evidence that statutes are improving human nature or making society more secure. A very large per cent. of the laws are pronounced unconstitutional. Some are vicious, some foolish and others are dead letters. The courts become confused and the lawyers manage to feather their nests from the geese that seem anxious to be plucked.

RAILROAD disasters are creating universal talk. This is a talking age, and a certain amount of talk precedes all great reforms. There is now a determined purpose on the part of the public to hold some one responsible for railroad disasters where people are killed and maimed. The "nobody to blame" racket has had its day. The declaration that "it is appointed unto man once to die," no longer means that it is appointed unto man to be killed. Rotten bridges, bridges half built, old, crippled engines, incompetent men and men overworked will not be tolerated. A new departure in such matters is close at hand. Public opinion is being shaped for a revolution and a reformation. The "Divine Providence" theory won't wash much longer.

TIME IS MONEY.

Benjamin Franklin, the illustrious American, is credited with saying: "Remember that time is money." Biographers say that the principle feature in the character of Franklin was "worldly wisdom." This is doubtless true. Worldly wisdom relates to the affairs of this life, but not entirely so, since it is worldly wisdom to be honest and truthful, true to obligation, and faithful to every trust, and it may be said that that sort of worldly wisdom reaches beyond this life, and has much to do with shaping affairs in the life to come. But we do not care to discuss such propositions here and now. We write for the eye and understanding of men whose largest and most valuable worldly possession is time—and Franklin said, "Time is money." Maxims, which embody in a condensed form the wisdom of centuries gone, though often repeated, and universally accepted as axiomatic, do not, as a general proposition, exert the influence upon the lives of men as, in the very nature of things, society has a right to expect, and yet fortunately the great majority do heed the wisdom of the world's proverbial philosophy. In the line of the maxim "time is money," Solomon says, "Go to the ant, thou slug-gard; consider her ways and be wise." The ant goes upon the principle that "time is money." "In all labor there is profit." "See'st thou a man diligent in his business; he shall stand before Kings." "Whatsoever thy hand findeth to do, do it with thy might." Solomon was accounted a man with large resources of worldly wisdom, and his proverbs, if followed, would keep men from a multitude of mistakes and advance them on the road to prosperity. Among the English proverbs in the line of Franklin's saying, "time is money," it is said that "an hour in the morning is worth two in the afternoon;" that it is better "to go to bed supperless than to rise in debt." "Diligence is the mistress of success," and "every man is the architect of his own fortune." Again "idleness is the parent of want and shame." "Of all prodigality that of time is the worst." "Opportunities neglected are irrecoverable." Such wise sayings could be reproduced to weariness. They emphasize the maxim, "Time is money." To throw away

time is to throw away money. By the proper use of time men obtain money. Money will purchase every thing except time—a minute, an hour, a year, past is gone forever. Every man has just so much time allotted him, but he can never know how much will fall to his share—hence, we assume there is the greater necessity for making the best possible use of the hours as they come.

"Time is money." Indeed, time is something more and better than money. He who squanders time is profligate of God's most precious gift. It is not worth while to reason upon such self-evident propositions. We read of self-made men. Honestly analyzed, the term "self-made" may be somewhat fanciful; still, there is a large element of fact in it. Every man credited with being "self-made," has had help, by the examples of others, by books and by men who were appreciative of effort to overcome embarrassments which lie in the pathways of men who inherit nothing to be accounted as aids except indomitable purpose and noble ambition. And it will be found in every instance, that self-made men regarded "time as money" and that they husbanded it with miserly care. They did not throw away opportunities. And it should be remembered that the present is more favorable for those who must rely upon themselves for advancement in their chosen profession, trade, avocation or calling, than the world has ever known—schools and books have multiplied; the newspaper is everywhere. The school master is abroad as in no other age of the world. If the young man desires to learn, opportunities are on every hand. He may grow in wisdom and in knowledge, multiply the sources of happiness and advance to commanding positions of influence.

In discussing the maxim, "time is money," a great many men will say, "when my day's work is done, there is only time for rest, that I may regain my strength for another day of toil." Such declarations ought not to be brushed aside as the croakings of slothfulness. There is too much truth in them to be treated lightly, and yet, when prudently scrutinized, it will be found that there is a margin for self-culture which is all too often thrown away. And here it should be said, that we address more particularly young

men; men advanced in years, with large families on their hands, find it difficult to form habits of study and investigation, but young men cannot plead such excuses.

A day is divided into twenty-four hours. Suppose that the average day's work is ten hours, there is a remainder of fourteen hours. Of this, say eight hours should be devoted to sleep, in that case every workman has six hours every day at his command, or thirty-six hours a week, Sundays excepted. This is equal to $3\frac{1}{2}$ days of 10 hours each every week. If we deduct $1\frac{1}{2}$ of a day a week for recreation, *fun*, if you please, we have two full days of ten hours each, twenty hours a week which may be devoted to mental culture, or 104 days of ten hours each every year, which is equal to three months of thirty days each and fourteen days over, or three and a half months. Now, suppose that this saving of time for study begins with a young man at eighteen and continues until he reaches the age of fifty years; in that case there are thirty-two intervening years—in each of which three and a half months of thirty days each, are rescued for mental culture—reading, study, investigation? The result would be that he would secure eight and a half years for self-improvement. In such calculations there is not a particle of vagary, nothing utopian, nothing impractical, and if there is a will, the way will be open and results would justify all reasonable anticipations.

Most earnestly do we invite young locomotive firemen to consider the subject. Beginning at eighteen years of age and continuing the course mapped out, until thirty years of age, three and one-half years would be gained for study, rescued from waste, and we claim, if adhered to with unflagging fidelity, the country would see an army of locomotive engineers such as the world never saw before, men largely self-made, scientific, practically and theoretically educated, thoroughly educated, advancing to even higher positions than the throttle, demonstrating that "Time is money" and better than money. We doubt if there is any business in the world that presents such an inviting field as railroading to inspire ambitious young men to work and study to save their time from waste, to devote their

leisure hours to study, self-education. Such devotion to self-culture is certain to lead to success, to promotion, and we hail with special satisfaction the fact that young men, locomotive firemen are taking this view of the subject and the *Magazine* will promote in every possible way, at its command such laudable ambition.

WE see it stated that the managers of a railroad in the north of England "insist that its engineers shall take at least nine hours' rest between one day's labor and another, as a precaution against accidents." An overworked engineer, from the moment the overwork begins to tell on his physical and mental energies, becomes a dangerous man. His own life is in constant peril, as are also the lives of every person on his train. In the United States locomotive engineers are constantly overworked. They run too many hours before they rest, and when they leave their engines they do not rest a sufficient number of hours. There is no just excuse for this, and a radical change is demanded. The day is not remote, we are confident, when public attention will be so intensely aroused that dangers to railroad travel will be largely overcome by an enlightened policy regarding the physical and mental endurance of employes.

LET the announcement be made that gold in paying quantities has been discovered, no matter where, and at once a vast army of gold hunters take up the line of march for the auriferous region. No amount of peril deters them, risks are readily accepted. The love of gold outweighs and overcomes every conceivable embarrassment. Cold or heat, sickness, sorrow, pain and death, wild beasts and savage men, the gold hunter dares them all and goes forward. Nothing dismays him. Following in the wake of the gold hunters comes the railroad. It has been said that there are vast deposits of gold in Alaska, the American Siberia, and now comes the announcement that a railroad is contemplated from Portland, Oregon, to Alaska, and that the capital stock of the company has been fixed at \$50,000,000. The scheme appears visionary, but if "pay dirt" exists in Alaska, the road will eventually be built.

A NEW DEPARTURE.

The subject of education is up for debate, not only in Congress, but everywhere throughout the country. The importance of education is not over-estimated. The education of the people, the whole people, is an American idea. The public school, the free school, in which an elementary education could be obtained, has an early date in the United States, and the policy has grown with the growth, and strengthened with the strength of the great American republic, and is so thoroughly incorporated in the American mind, the statesmanship of the country, that it can never be eradicated. It is a fundamental idea. Education is believed to be, as well it may, the foundation upon which rests the superstructure of the government. The intelligence of the people is the one thing needful to enable the American people to comprehend and appreciate the blessings which our institutions confer.

It is not required that we should devote space to the discussion of such well established facts. They are universally admitted. But there is an education, of incalculable value to workingmen, which the public schools do not furnish. The common schools simply supply a foundation upon which to build, and men who have only been able to obtain the rudiments, are required, if they advance in knowledge, to avail themselves of every opportunity to improve their minds, and it is manifestly the part of wisdom, it is in the line of improvement for workingmen not only to avail themselves of such opportunities as fall in their way to advance their welfare, but in the absence of such opportunities to *create* them themselves, and this brings us to the consideration of a proposition which we have denominated as "a new departure."

The Brotherhood of Locomotive Firemen now has a membership of 20,000 and 400 Lodges. The organization after fifteen years of struggle, if not perfect, is as near that point as has fallen to the lot of any similar organization in the country, and here, were it our purpose to indulge in statistics, the figures at our command would tell a story of fidelity to obligation, to practical ideas luminous of faith in man's capacity to

achieve success, and replete with encouragement.

It should be understood that a vast majority of the members of the Brotherhood of Locomotive Firemen are young men, in the strength and pride of young manhood. That they are ambitious, aspiring, that they recognize the value of opportunities and are quick to seize upon advantages, and that their chosen life-work is one that demands familiarity with mechanics, the *reason why* of everything that pertains to the locomotive, a machine, which, all things considered, has more to do with the advancing civilization of the period than any other that can be named, a machine that has come to stay, and that will never be displaced by human invention. The iron highways of the world are steadily increasing in number and mileage, and in all lands. The fireman is the embryo engineer, he is, by virtue of his vocation, the student of the locomotive. He must know it, and if ambitious he will know it. He will study it until every mystery is solved and until every question relating to construction and operation will be reduced to A, B, C simplicity.

To obtain this desirable knowledge what are the opportunities of the average locomotive fireman? At the first glance they appear few and far between. But is such, in fact, the condition? True, the fireman's work is often exhaustive, and when the *run* is over he feels the necessity of rest and the recuperation of physical energies. But firemen, like other workers, have leisure, and the question arises, how shall this leisure be best employed? We answer that a portion of it should be given to study, and if this is done, there will come forth from the ranks of firemen, men thoroughly equipped to assume all the responsibilities of locomotive engineers.

We have said there are now 400 Lodge rooms of the Brotherhood of Locomotive Firemen. The suggestion is that these Lodge rooms be made on certain days and nights, school rooms, studies, lecture rooms, where the members of the Lodge shall meet, under such regulations as they may adopt, for the purpose of self-education. Why not? Is there anything impractical in the suggestion? We think we see in it immense

practical good. It is a new departure full of promise. What is the history of the steam engine? Who were the inventors? What have been the improvements? What is it to-day as compared with the first effort of Watt, or the locomotive now as compared with the first used in England. It will be observed that the study of the steam engine relates to the construction of the machine with the whys and wherefores of which every locomotive fireman who aspires to be an engineer should be familiar. Now, then, we ask, why may not our Lodge rooms be made, to a certain extent, school rooms, where firemen may meet at regular intervals to discuss the subjects of mechanics not only as they relate to the steam engine, but to the application of the laws of motion and forces to objects in nature? We fail to see any good reason why the Lodge room may not become a school room, a lecture room, for the advancement of firemen in mechanical knowledge, and we do discover many cogent reasons why they may become such centers of valuable information.

We assume that every Lodge of locomotive firemen can secure the active co-operation of a Master Mechanic who would take special pleasure in devoting some of his time to delivering lectures to the firemen upon subjects connected with the construction of the locomotive, because such information, aside from all other considerations, would be promotive of the welfare of the road, since it is an accepted fact that the better informed the firemen are, the more valuable they are to the road.

We regard the subject as eminently worthy of the careful consideration of the members of our great Brotherhood. It is an advance step. Each Lodge, without any large expenditure of funds, could be supplied with a few text books, and a spirit of inquiry would at once be aroused and the good work of self-education would begin in earnest, and would lead, we are confident, to the best of results. The Mechanical Department of the *Magazine*, which we are glad to know is growing in favor, would attract still greater attention, and in a few years the Brotherhood of Locomotive Firemen would become justly distinguished for scientific attainments which would add in-

definitely to its influence and give it a still stronger hold upon the regards of employers. Upon this subject the *Magazine* will most gladly receive communications from the Lodges.

CALIFORNIA statisticians no longer boom the State for its auriferous wealth, but on the contrary, discuss its wheat and fruit producing capacity, saying, "that its 25,000,000 acres of wheat producing lands can annually yield 400,000,000 bushels of wheat, which at 80 cents a bushel would bring \$320,000,000." This would be more than five times the annual product of gold and silver of the entire country. Placing the consumption of wheat at six bushels per capita of the population of the country, it will be seen that California could feed the people, with an annual surplus of 40,000,000 bushels. California is not the only wheat producing State; indeed, other States can show far greater yields per acre, and it would seem to men who devote any attention to such subjects that the food producing capacity of the country ought to insure working men an ample supply, and this would be the case if wages were what they should be, or if labor received its just share of the wealth it creates.

THE *Union Pacific Employés' Magazine* for February, comes to us with a new and beautiful cover, the design of the title page being unique as well as useful. With the February issue, the *Magazine* enters upon its fourth year, with, we are glad to believe, excellent prospects for a prosperous voyage. The editor, Mr. J. N. Corbin, referring to past, present and future of the *Magazine*, says: "One star in its crown is seen in the fact that it does not suit everybody, it is not intended for that purpose; we can truly say that we have never attempted that impossible feat." It is a highly cheering sign of the times, when publications devoted to the interests of employés, in all departments of the country's enterprises, give evidence of prosperity. It means the triumph of the right after a while. We congratulate the editor of the U. P. E. *Magazine* upon the favorable outlook, and hope the harvest may be commensurate with the most sanguine expectation.

THE LABOR MOVEMENT.

There was a time, not remote, when it was held that the only weapon of the wage workers of America was the strike. But a change has come. Wage workers have advanced in intelligence. They have become readers and thinkers, and they have become close observers. They have devoted their leisure to the study of conditions, surroundings, circumstances, and have advanced to positions which enable them to arrive at just and wise conclusions. We refer to the many, not to the few. There are still those who believe that "our varied industries and heterogeneous population necessitate all phases of warfare, from the guerilla system, incident to isolation, to the arbitration of differences consequent upon the higher civilization of congregated citizenship. But the great mass of wage workers in the United States believe that the ballot is the weapon which is ultimately to secure them justice and equal privileges before the law. It is an old aphorism, "Like people, like king," or, *vice versa*, and it may be said, like people like law, and certainly this may be said when the ballot is in the hands of all the people.

In the United States the wage men are in the majority; they have the ballot; majorities rule. Now, then, if law-makers are corrupt, if laws are vicious, if injustice is practiced, if rights are cloven down, if courts are venal, who is to blame? Manifestly those in the majority, who, having the ballot, can, if they choose, remedy the evils complained of.

Does some one ask, if the wage-workers have this power why do they not use it? It is an easy matter to ask questions, but not always as easy to answer them. We shall attempt a reply. In the first place, wage men have been allied to some one of the political parties of the country, and have permitted their fealty to party to obscure the fact that legislation has been to their detriment rather than to their advantage. To use a phrase, they have "run with the machine" regardless of consequences. They have been the victims of false professions, of pledges made to be broken. It has required time to educate workingmen out of the old rut and up to a higher plane of pur-

pose. What is the spectacle now? Workmen are federating. Not for the purpose of "guerilla" warfare, not for the adoption of the policy of anarchists, not to revolutionize society and government by bludgeons and bombs, dynamite and kindred explosives, but by the ballot. They realize that they are American citizens, that they create the wealth of the country, that revenues are derived from their labor, that in peace they pay the taxes and in war fight the battles, and rising to the dignity of their rights under the Constitution they are saying, "We will elect just men to office. We will have just laws administered by honest men, and this we will do by the use of the all-powerful weapon—the ballot, and this they can do by the ballot, and they can achieve such victories as will astonish the world. Does some one ask, When will these wonderful things transpire? When will this full orb'd day occupy its place in the calendar? When will this millennial era dawn? Such queries have a taint of querulousness. It is sufficient to say that the labor movement is a growth. To emancipate labor from the thralldom of injustice is not a task of a day or a year. Labor confronts an antiquity of injustice. It bends beneath wrongs which began before the pyramids were built. It has been prostrate for forty centuries, and in all lands beneath the sun it is prostrate to-day, save in this God favored land, and here, after a century of freedom wagemen have, by processes of political and judicial chicane, been kept under the ban. We say political and judicial, because by law and by decisions of courts, grasping and conscienceless men have been able to so shape business affairs as to make *work* all too often the synonym of poverty and degradation. In this connection we desire to be understood as saying that a new departure has been inaugurated, that a new revolution has been begun which means the emancipation of labor from many forms of injustice and wrongs. Not by the mob, not by incendiary harangues, not by arousing and firing the passions of men, not by disturbing the peace and security of society, but by means ordained by the Constitution and in harmony with order.

What, we ask, is more fashionable than to

quote wages in king-cursed European lands? As if to tell, workmen of America, that citizenship and all of its privileges, responsibilities and high aspirations is to be measured by wages. We admit the importance of wages. We have a rational conception of the power of money, but let it be understood that wagemen of America are not to be silenced by any per diem. The high resolve is to change unjust laws and place men in the legislative, executive and judiciary departments who will see that just laws are righteously administered. We admit that the task is herculean, but not more formidable than to successfully redeem a continent from a wilderness and make fruitful Edens as numerous as the stars. This labor has done for America, and if wagemen are true to themselves, true to their noble heritage, the time is not distant when they will behold their banner waving in triumph where legislators deliberate and where judges proclaim the law.

SHALL WE HAVE FEDERATION ?

Early in the month of February, a New York paper published the following telegraphic dispatch from Philadelphia :

A local paper this afternoon publishes an interview with Mr. M. F. Bonzano, superintendent of the Boundbrook Division of the Reading railroad system, regarding the reports that the Brotherhood of Locomotive Engineers is in a bad way financially, and that there is a great deal of dissatisfaction with the organization. Mr. Bonzano said that he was aware of the dissatisfaction within the order. It was caused, he said, by the heavy assessments upon the members of the Brotherhood made in consequence of the strike of engineers upon the Chicago, Burlington & Quincy road.

"The fact is," he said, "that the men and their families can not live upon their wages and bear such a burden, and I am satisfied—indeed, I know—that of the engineers upon the Reading system who are members of Divisions Nos. 71, 75, 80 and 321, of the Locomotive Brotherhood, not twenty-five, nor even fifteen, are in good standing. I mean that not over that number have paid their assessments. It looks as though the process of disintegration is pretty well under way.

"There have been two powerful causes operating against the continuance of the power of the Locomotive Engineers," Mr. Bonzano said. "The first was the death-blow the Reading struck at the Knights of Labor, when it fought so successfully the great strike of last winter, and the other was the victory of the Chicago, Burlington & Quincy road over the Brotherhood, in successfully overcoming the strike of the engineers."

"It is only a question of time," continued Mr. Bonzano, "as to when other systems that are now measurably or altogether controlled in their employment of engineers by the Brotherhood will fight with and overthrow it, and I believe that within a year the Pennsylvania railroad will find it necessary to meet the issue."

The talk about the Brotherhood of Locomotive Engineers being financially embar-

rassed is all bosh. That the C., B. & Q. strike tested the financial fiber of locomotive engineers, is doubtless true, but that the strain endangered the organization no one, who has any knowledge of the Brotherhood will believe for a moment. But our reason for reproducing the dispatch, is not for the purpose of discussing the finances of the B. of L. E. or any division of that order, but rather to give deserved prominence to the expressions of Mr. Bonzano, Superintendent of the Boundbrook division of the Reading railroad system. This gentleman is evidently pleased with what he calls "the death blow the Reading struck at the Knights of Labor" and the "victory of the C., B. & Q." In this there is food for reflection, all the more interesting because of Mr. Bonzano's prediction that "within a year the Pennsylvania railroad will find it necessary to meet the issue." What issue? Manifestly, the overthrow of the B. of L. E.

It is quite probable that the Pennsylvania railroad contemplates making the effort. Should Mr. Bonzano's prediction be fulfilled. Should the trial come, what will the B. of L. E. do about it? The talk of Mr. Bonzano brings into the boldest prominence possible, the question of federation. Alone, the B. of L. E. could be speedily overcome. The Pennsylvania railroad would go in to win. It would count the cost and federate, if possible, with every other railroad corporation on the continent to insure success—on the other hand suppose the B. of L. E. should be in alliance with the B. of L. F., with the B. of R. B. and the Switchmen's Association? The aspect would be entirely changed. In the first place, the Pennsylvania railroad would not put the power of the federated brotherhoods to test. No strike would be declared. To the rescue would come compromise and concessions, in response to arbitration.

Such facts are realized by every other organization, except the B. of L. E. and the O. of R. C., both of which ought to realize that the security of their rights lies in federation, and that, this will eventually be the result, we believe is in consonance with the logic of events, of reason and of necessity. And such talk, as is credited to Mr. Bonzano, in the very nature of things ought to expedite federation.

DEAD BEATS.

It is not an easy matter to properly describe a "dead beat," and that the *Magazine* should be required to refer to any locomotive fireman as a "dead beat" is a most unwelcome task. The "dead beat" don't "pay his way." The "dead beat" is a contemptible creature, totally unworthy of recognition among gentlemen. The dead beat is always a liar. His instincts are of the lowest order. He is totally bankrupt in character and principle. He is without honor or honesty or any other redeeming trait. He seeks his prey among the poor. He hasn't the courage of the sneak thief. He takes no chances of going to the penitentiary. His methods are different, though results are practically the same. The "dead beat" gets a poor woman to wash and iron his clothes, she rubs and irons and hands over the goods, and asks for her pay, always a paltry sum. This is refused, never paid. Technically that is not stealing, not theft, petty larceny; practically, it is, it is robbery, fraud, defrauding, and as a consequence the "dead beat" and the "sneak thief," are of the same family, are of the same genus, have similar instincts, deserving about the same measure of contempt, and if justice were done, would receive about the same measure of punish-

ment. The dead beat, when he can, beats his boarding house keeper, as he does his washer woman. He eats, drinks and sleeps, and when possible refuses to pay. He owes for his blood and muscle. His stomach is in debt, but he is too depraved, too mean and contemptible to recognize the claim against it and seeks by lying, by vulgar subterfuge and by running away, to defraud his landlady out of the money he honestly owes. There are that sort of locomotive firemen, and whenever found are an unmitigated nuisance, a disgrace to the Brotherhood and a stigma upon human nature. What is the remedy? This—pay your way, carry yourself like a man. There is absolutely no other remedy. When a locomotive fireman leaves a road, he should above all things leave a good record behind him. There should be no wash bills and board bills left unpaid. It is unpleasant to discuss such questions, and still more unpleasant that there should be a cause for such remarks as we are required to make. A "dead beat" is a sneak, and the worst feature of the business is, there is precious little probability that he will ever reform. But others seeing and knowing their character, may have the effect of a warning against these practices and the inevitable consequences that follow.

A WINTER SONG.

H E keen North wind is out to-night;
With frantic speed, in fierce delight,
He rushes southward in his flight.
From lands where glows the Northern light.

He grapples with the milder airs,
His angry eye upon them glares,
His icy hand their death prepares;
No realm with other kings he shares.

He breathes on all the leafless trees,
He shrieks aloud in ecstasies
When, shrinking from his touch, he sees
Them sway and bend in every breeze.

With clarion voice he loudly calls
His minions from his Northern halls,
And sweeping from those misty walls
A host of white-robed snow slaves falls.

O, then his mirth is wild and gay.
Tho' earth be dull and skies be gray.
He knows he's monarch of the day;
Whate'er he wills, none say him nay.

MARCH, 1889.

MINISTERIAL MANIFESTOES.

A sermon preached on Thanksgiving day by the Rev. George Guizey, pastor of the Emmanuel Baptist church, of Paterson, N. J., on "The Wages of Workingmen," has fallen under the eye of the writer hereof, and a few consequent reflections are noted for publication in the *Firemen's Magazine*, should the editor deem them of sufficient value to warrant publicity. The preacher said:

The oppression of the poor is both a blunder and a crime, and the verdict of history is recorded against it. In giving the law to the Commonwealth of Israel God did not neglect the vital question of the wages of the poor. This divine statute is as positive as any command in the Decalogue. And it is surprising how little attention is paid to it in these days of advanced social and political economy. Thus it is written: "Thou shalt not oppress an hired servant that is poor and needy, whether he be of thy brethren or of the strangers that are in thy land or within thy gates; at his day thou shalt give him his hire, neither shall the sun go down upon it, for he is poor and setteth his heart upon it, lest he cry out against thee unto the Lord and be sin against thee." The proper and prompt payment of the wages of the poor is, therefore, a law of God."

If, as the preacher says, "the proper and prompt payment of the wages of the poor is therefore, a law of God," then it must be said that the law of God is everywhere and continuously violated; that it has become a "dead letter," has no recognized binding force except in instances so rare as to be totally valueless in the construction of an argument to prove that God rules in the councils of employers. Students of the scriptures are aware that the poor are honored with frequent mention. "Inspired" writers did not overlook them. As far back as A. M., 2,500 or, say B. C., 1,500, directions were given that every seventh year land was to "rest and lie still" that the poor might have a chance to eat, and at the same time instructions were given not to "countenance a poor man in his cause." Even as far back as the dates mentioned there seems to have been an effort made to establish a sort of a cash equality of souls if not of bodies. Collectors were appointed to go among those "numbered from twenty years old and above," to obtain "an offering unto the Lord," and the order was that "the rich shall not give more nor the poor shall not give less than half a sheckle to make an atonement for their souls." In other words, a poor man's soul was worth as much as a rich man's soul; the atonement price being a "half sheckle" in each case, or 31½ cents, confirming, we think, Peter's declaration

that God is no respecter of persons, as also the American Declaration of Independence, that "all men are created equal." It is further stated that "the poor shall never cease out of the land," and that "the Lord maketh poor and maketh rich," that "He bringeth low and lifteth up," and furthermore, that "the Lord raiseth up the poor out of the dust and lifteth up the beggar from the dunghill." We are told that "the Lord heareth the poor," and that He "shall judge the poor." We are told that "he that oppreseth the poor reproacheth his Maker," but that "he that honoreth his Maker hath mercy on the poor." We are informed that "wealth maketh many friends," that is, wealth combines, federates, "but the poor," says Solomon, "is separated from his neighbor."

We could multiply scriptural quotations relating to the poor. Nor was the question of wages entirely overlooked. It was commanded that "the wages of him that is hired shall not abide with thee all night until the morning," and we hear it said, "Woe unto him that buildeth his house by unrighteousness and his chambers by wrong; that useth his neighbor's service without wages, and giveth him not for his work." We are not disposed to be irreverent, but the fact is, we do not take much stock in the whining cant about "the poor." Its direct tendency is degrading. It links poverty and wages in an offensive embrace. Its purpose is to create caste. It intimates that the man who works is dependent upon the man who has money, whereas exactly the opposite is true—absolutely and irrevocably true. The men who work are the salt of the earth. Without work comes stagnation, decay, putrefaction. A literature that is forever exalting the millionaire drones, blood-suckers, and treating the array of working men as their dependents, is vicious to an extent that defies the combined power of rhetoric. It is a stupendous lie, iterated and reiterated for base purposes. The working man has soul, spirit, mind, intellect, ambition, courage. What more have the men who grow fat and sleek, arrogant and oppressive? Is the reply money? Capital? Wealth? In juxtaposition we place the workingman's skill and muscle, his power to create, to build, to repair, and ask the world to choose. Is this creative power and energy which allies the workingman—and we say it reverently—with the Ruler of the Universe, to crawl and plead for justice? Are workingmen to be guided by scriptural quotations? pulpit platitudes? There is neither a law nor a command of God that has for its purpose the mitigation of injustice or the enthronement of justice in the matter of wages for work, that Christendom obeys. It was ever thus; even the "Scribes and Pharisees" who sat "in Moses seat," bound

"heavy burdens and grievous to be borne," and laid "them on men's shoulders;" they "devoured widows' houses, and for a pretense made long prayers." They were the rich men who fared sumptuously, and who left the beggars to the comforts and consolations of the canine sanitary commissions.

The Rev. Mr. Guizey, in his Thanksgiving sermon, after stating that "the proper and prompt payment of the wages of the poor is a law of God," proceeds to ask a number of questions, as follows:

Would not \$2 a day be a fair remuneration for a hard day's work? Does not the steady and faithful workman earn it? Can he properly support his family and educate his children on a less amount?

Would it not result in a fair distribution of wealth? Would it not at least check the growing complaint that capital is constantly accumulating in the hands of the few, while the great mass of hard working men remain poor and poverty increases?

Would it not bring more money into circulation and thereby benefit all classes?

Would it not be a security to the workingmen and remove a powerful temptation from the capitalist by making it unlawful or removing the motive for the employer to discharge a man of family and put a cheaper man in his place?

Would not a law fixing the minimum of wages at \$2 per day place the family of the sober workingmen beyond the immediate reach of poverty?

Would not such a law dignify unskilled labor and give the family of the common workman a chance in the battle of life?

Would not such an adjustment of the labor question lead to a more equal distribution of labor throughout the whole country?

Would not such an agreement bring the employer and employe closer together in the common industries of the country? Labor produces all the capital, and shall the child degrade and oppress the author of its being?

The preacher answers each of the questions affirmatively. He would advocate a law fixing the minimum wages for unskilled labor at \$2.00 a day. He says a man can support a family and live comfortably on \$2.00 per day if he has steady work and manages with reasonable economy. But the preacher is not practical. The law he contemplates will never be enacted. Nor would such a law be wise. The preacher asks if "\$2.00 a day would not dignify unskilled labor?" What is there degrading in labor, skilled or unskilled? He refers to the hod-carrier. What is there degrading about carrying brick and mortar more than in the use of the materials by the artisan on the building. The dignity of work, labor, is not dependent upon wages. It is inherent. No law, no decree, no whereas or resolution can eliminate the essential dignity of work. God Himself is a working God. He built the world.

"The spacious world by Adam trod,
Was the first temple built by God,
His fiat laid the corner stone
And hewed its pillars one by one."

Christ said, "Hitherto, my father worketh, and I work." Labor is a body. It is not "one member but many." Old Saint Paul

was a logician. He said, "If the foot, shall say, because I am not the hand, I am not of the body; is it therefore not of the body? And if the ear shall say: Because I am not the eye, I am not of the body; is it therefore not of the body? If the whole body were an eye, where were the hearing. If the whole were hearing where were the smelling? And if they were all one member, where were the body? But now are they many members, yet but one body. And the eye cannot say unto the hand, I have no need of thee; nor again, the head to the feet, I have no need of thee." In labor it is the same—the skilled and the unskilled workman are in all enterprises demanding, work, indissolubly bound together. The spade has as much dignity as the trowel, and the hod with its mortar is as resplendent as a casket of jewels. Cincinnatus at his plow, was the peer of Cincinnatus as a Roman Consul. The curse of the world is the bigoted, blighting aristocracy of labor. The supreme question is when will laboring men recognize the sublime truth that they are one body? There has been for centuries war between the eye, the ear, the hands and the feet of labor. The throttle wants to assume superiority over the scoop, the punch over the brake, the trowel over the hod, and so on to the end of the list. And this miserable bigotry will continue until it is driven out of men by the all-conquering power of education. The time is coming, when such questions as the Rev. Geo. Guizey propounds will be displaced by others, something after the following style:

Would it not be well to make eight hours a legal day's work?

Would it not be well to put an end to the working of the miracle, whereby nature is transformed into interest-bearing stocks and bonds to devour the earnings of labor?

Would it not be well to make the cornering of food products a felony, and send the christless whelps, guilty of the crime, to the penitentiary?

Would it not be well to disband the gangs of Pinkerton thugs, employed by corporations to murder workingmen, when oppression drives them to seek redress?

Would it not be well to regard themselves as one body. Capable, if united and harmonious, to determine all questions relating to their own welfare?

The educating forces are in motion. Movements are in the right direction. The rivulets make the river and the rivers flow restlessly to the sea.

The thoughts, aspirations and determination of workingmen are embracing each other like drops of water. The tide in the affairs of workingmen is rising—it will be taken at its flood and lead to fortune—to emancipation, to power.

L. M. Opecue.

For the Magazine.

NOBODY KNOWS.

Nobody knows, by the tearless eye,
The sorrow the heart contains;
And none can tell, though the cheeks be dry,
The load that the soul sustains;
For sometimes, in our sorest grief,
The fountains refuse to flow,
That, flowing, might afford relief
From deepest pangs of woe.

Nobody knows, by the heaving breast,
The struggles that rage within,
Where the ranks of light were sorely pressed
By the powers of wrong and sin;
For in the human heart are found
Hotly contested fields,
Where one division holds the ground
The wavering column yields.

Nobody knows, by the stifled cry,
The depth of another's woe;
By catching the sound of a tremulous sigh,
Can we emotions know?
Do lamentations always tell
The anguish of the heart,
The pangs so piercing that compel
The choking sobs to start?

Nobody knows, by an outward sign,
The strength of the tempter's snare,
How tendrils of passion can entwine
The spirit in dark despair;
For some will trudge life's tollsome road,
Without a single sigh,
And bear up with a greater load
Than you have borne, or I.

Nobody knows, by the humble place
A man at the first may fill,
Where he will stand at the end of the race
On the summit of life's hill;
For merit, like the hidden gold,
Beneath the rugged rocks,
Will, sooner or later, its worth unfold
When light the truth unlocks.

Nobody knows, by a tattered vest,
The heart that is beating within;
Is outward appearance a proper test
To prove what a man has been?
Are there not some whose paths through life
Lead through the deepest gloom,
And all is struggle, toil and strife
From the cradle to the tomb?

Nobody knows, by the locks of gray,
Or the furrows upon the brow,
How rugged has been the traveler's way,
How steep and difficult now;
Around each heart a veil is hung,
Unpierced by mortal sight,
Where oft the soul with anguish wrung
Repines in sorrow's night.

Nobody knows? Yes, there is one
Who watches the sparrow's fall;
He notices every kindness done,
And kindly remembers all.
And many who in tears below
These gloomy walks have trod
Will soon a brighter region know—
The palace of their God.

—Geo. W. Hall.

STANBERRY, Mo.

RICHMOND.

Like ancient Rome, the beautiful city of Richmond, Va., is built upon seven hills, and from her throne of beauty, now, as in times past challenges the admiration of visitors. The old Confederate capitol stands in the center of Capitol Square, surrounded by

gigantic trees under whose wide shading branches beautiful walks wind round the sloping mounds, and over whose grassy sides, hundreds of domesticated squirrels frisk and play. The locality recalls those bitter days of yore, when the North and South, on tented fields and in many sanguinary contests, sought to vindicate adverse views of government.

To the right of the capitol building stands the colossal and magnificent statue of Washington, surrounded by heroic statues of Jefferson, Henry, Mason, Lewis and Marshall, which constitute the finest group of statuary in this country.

The Old Dominion is justly proud of these illustrious names, as are all the States of the Union, and they are all inscribed upon the tablets of the nation's heart. These bronzed, silent statues add beauty to the capitol square and while in the presence of their speechless forms, memory recalls the years of peace and strife, of trials and joys, from the inception of our national independence down to the present day in which our glorious country stands a solid unit ready to champion the cause of the oppressed and vindicate the right.

Had I the gift of song at hand,
While in their presence there I stood,
To sing their praise in every land,
As monuments of lasting good—
Who drew the righteous blades of steel
And made the British armies reel
In answer to that grand appeal
For Liberty or death.

But as I am not gifted in verse, I leave the statues and the square to visit other points of interest around which cluster many historical incidents—notably Libby Prison. The building stands on the bank of the canal and at the gate you meet a courteous young man, who takes your quarter and ushers you into Libby Prison. In years gone by that dreaded name grated harshly on the ears of the boys who wore the blue when captured by the boys in gray, and which is now a national relic of no small importance.

I paid to get into Libby, and one can still read the names of inmates written on the floors and walls of Libby, who instead of paying to get in would have given half their store of future hopes to get out. We spent two hours in the building and then climbed to the top of Libby Hill, from which point the view is simply grand. From this elevated point, the tourist has a splendid view of Richmond on her seven hills, surrounded by broad fields of green.

Reluctantly we left this sublime scene of soul-thrilling beauty for Hollywood Cemetery and after walking a long time we reached the desired locality. During our journey we made frequent inquiries of those we met as to distance, receiving replies which afforded precious little satisfaction.

One said the cemetery was distant "about three avers and a right smart step" and so we went on avering and stepping. We tried to bargain with a darkey en route to town with a load of turnips to haul us to Hollywood, but he "reckoned he'd done haffen to sell de turnips fus." Weary and almost discouraged we inquired again as to the distance to Hollywood, and were told it was "about two sights and a right smart bit." The Virginia idea of distance was confusing but we were in for it and trudged on, and finally, time and toil which solve all such problems, brought us to Hollywood the silent city of the dead—and if the beauty of a burial place could serve as a passport of the soul to heaven Hollywood would be my choice of ground, for the beauty of the sacred spot robs death of all its dread.

Within the inclosure is Gettysburg Hill where stands Pickett's monument, a beautiful piece of chiselled art, while around the gallant leader's grave are rows of plainer slabs, marking the resting place of those of his command who fell in that dread charge at Gettysburg, and which stands almost without a parallel in the impetuous courage of the world's great kings of battle.

We reached the Pyramid, a magnificent pile of dry masonry fifty feet square at the base, and ninety feet in height by passing through a grotto, where the music of a murmuring rill lends enchantment to the scene. The Pyramid is covered with the Virginia creeper which gives to the structure a beautiful appearance.

In Hollywood with its seven hills, we spent half a day visiting the different places of interest, and found Chapel Hill, the most beautiful of the seven. The works of art here collected lend a charm to the works of nature. No words are adequate to the task of describing the beauty of Chapel Hill. Here are buried the remains of Presidents Monroe and Tyler, who have for their immediate neighbors many of the Old Dominion's honored sons. Among them General Stuart, whose grave is marked by a splendid obelisk. The only grave of this group, unadorned by art is that of President Tyler—and strange to say his grave has not even a headstone, while the grave of his daughter, which is next to his, is marked by a beautiful work of art.

It would have been agreeable to have remained longer on Chapel Hill, but we were compelled to leave the little Eden for the city, but before taking our departure we strutted to the brow of a craggy precipice at the bottom of which flowed the historic James river, wrestling with the gigantic rocks which at this point obstruct its current—and as the river was swollen to fully twice its usual size its battle with the rocks was grand.

Richmond and its environs are beautiful in themselves, and doubly interesting for historic associations, and all of Richmond's people are full of that free-hearted hospitality, characteristic of the South. Go hence and meet them, it will do you good.

H. J. Fackenthall.

FEDERATION VS. AMALGAMATION.

A prominent representative of organized labor recently propounded two questions, as follows, for the consideration of those who are interested in the advancement of labor organizations:

"Is it desirable that the bodies of organized workmen in the United States should amalgamate? If so, how can the amalgamation be accomplished without interfering with the individuality of the trades?"

"If it is not desirable to amalgamate, how can reciprocal relations be established and maintained?"

I have given these questions some thought and herewith submit such conclusions as I have been able to formulate for the attention of your readers should they be deemed worthy of space in your columns.

I do not favor the amalgamation of "bodies of organized workmen in the United States." The term "amalgamation," conveys a meaning, and expresses an idea totally foreign to the purposes of labor organizations, and would at once destroy such organizations. Amalgamation is destructive of individuality—distinctiveness. Take for instance copper and zinc, amalgamate, compound them and you have brass—the component parts have lost their distinctiveness. Suppose you take an organization of cigar makers and an organization of glass blowers and amalgamate them? You have as the result, a labor organization, but all distinctiveness has disappeared. "Individuality" is gone in so far as the organization is concerned, and this would be equally true of any other bodies of workmen. The policy is impracticable, if permanency and efficiency are to be the desiderata sought. Because, while the organization has nominally destroyed individuality, it will constantly appear in the membership, and as the two trades are totally dissimilar, there could not be found enough in common to hold them together in harmonious action. Besides, if such amalgamation were possible, the loss of individuality would, in my view of the matter, prove destructive of all rational effort in the direction of labor emancipation.

I regard it of supreme importance that the individuality of the organizations of workmen in the United States be maintained intact, because such distinctiveness insures active effective and continuous effort in the right direction, while their amalgamation would be fruitful of discord and dis-

integration, well calculated to bring discredit upon the cause of labor and postpone its liberation from its present unfortunate environments. The second question is:

"If it is not desirable to amalgamate, how can reciprocal relations be established?"

I answer by federation, by a compact for certain *sharply* defined purposes. I think federation eminently practicable; that it embodies a large element of common sense, and that it would secure to workingmen their rights, at least a larger share of their rights than has hitherto been accorded them. Federation is practicable, it is lawful, and it is American. It is in consonance with the genius of our government and of our institutions. For attack or defense it would be many organizations in one. The one supreme demand is justice to labor. Honest pay for honest work. If this were secured, if this was the rule and not the exception, labor organizations would devote all their efforts to increase the intellectual advancement and the social felicities of their members. But in the matter of wages justice has never been done labor in any department. I speak of workingmen as a body—and when to secure justice organiza-

tions have acted singly, disaster has often overwhelmed them, and this fact has suggested the importance of federation.

The subject is too broad for a letter. I can indulge only in outline thoughts. In federation each organization, like the states in the American Republic, regulates its own internal affairs. Ordinarily it needs no help from the federal government; but should such an emergency arise, then all the states in the federation act as a unit through the federal authority. Put labor organizations for states and you have the idea. I could, did time permit, and I could draw at pleasure upon your valuable space, state more definitely how such a federation could be of incalculable service to employer and employed and to society. I am persuaded that it would put an end to strikes and inaugurate arbitration. With arbitration comes an era of peace and good will. The idea of federation is abroad, and the more it is discussed the more it challenges approval. Perfected it would be a mighty, a resistless power for good. It would protect the weak, give courage to the timid, and its triumphs would be hailed by all well wishers of labor with boundless approval.

A. D. Vance.

For the Magazine:

THE BATTLE ON THE C., B. & Q.

HERE never was a battle, since the right assailed the wrong,
 Since Truth confronted Error on the battle-fields of life,
 Since to angel ears attuned, the spheres began their song,
 And fate decreed that Liberty should be the trophy of strife;
 No, there never was a battle since a workingman began
 To count the cost of courage and dared the right pursue,
 And proclaimed to all the world that he dared be a man,
 Than the Battle of the Firemen, on the C., B. & Q.

There was no bravado, no bugle call to arms,
 Neither pomp nor circumstance of sanguinary foes,
 No defending roar of cannon, arousing dread alarms,
 Nor crashing shot and shell to multiply the woes
 Of men who were fighting for justice and the right,
 Men who had the courage to contend for their due—
 All honor to the heroes in whose valor all delight,
 The Firemen in the battle on the C., B. & Q.

They did not cower nor run, they nobly stood their ground,
 They kept their banners flying defiant in the gale;
 At Gettysburg nor Marathon no braver men were found—
 God bless the veteran Firemen, they did not falter nor quail,
 They saw the power of money, which by their labor had been earned,
 In millions turned against them, to make them repent and rue,
 But the heroic Firemen only the more intensely yearned
 To gain a victory for the right, on the C. B. & Q.

God bless the veteran Firemen, how grandly they stood
 By every obligation, true as the magnet to the pole;
 They won a grand renown for the Firemen's Brotherhood,
 And their names shall stand recorded on fame's fadeless roll;
 Then courage shall be honored, in song and in story,
 While the world has a devotee of all things good and true;
 Then fidelity has won for them a wondrous weight of glory,
 In the battle for the right on the C., B. & Q.

Mechanical

Contributions to this Department should reach the Editor not later than the 5th of each month.

MARCH, 1889.

CLEBURNE, TEX., January 19, 1889.

MR. EDITOR:—Once more I am permitted to impose my obnoxious presence on the readers of the Mechanical Department.

Some few days ago I received an advance copy of the January *Magazine*, and by a perusal of the same I find that I committed a great mistake in one of my statements. On page 21, January number, I am made to say, "Any other point in a wheel not parallel thereto, etc." The word "parallel" should not have been used in this connection, but instead, I should have said, "and not on a plane therewith" as any number of points may be parallel thereto, both above and below, and not in unison therewith.

If "Amboy Division" will peruse my December article a little more closely, he will find his interpretation of my meaning meagre and quite at fault. I have not the December *Magazine* at hand, and so can't refer to page or quote exactly verbatim. I undoubtedly did say "Stopping a moment and then going on at an ever increasing speed. Coming to the bottom and stopping a moment," was the veriest folly and at no place in the article did I contradict this. I said "the bottom stands still" is undoubtedly true of a locomotive driver or other wheel rolling on a surface, but *only in the sense of two motions counteracting each other*. And now I am through with the wheel leverage and the difference in speed at different points. Like "Vulcan" on the hammer-blow, I have had my say. The ground has been very thoroughly fought over, and any more comments could only be a reiteration of some former statement, hence not needed here.

Plagiarism is something in literary parlance considered of a very contemptible nature, and according to "Engineer," page 25, January *Magazine*, there has been some plagiarism employed somewhere. Was Mr. Sinclair the literary thief? If so, and I were in "Side Rod's" place, I should immediately expose him to the public.

And now, Mr. Editor, and brothers, did you ever see a man who had a sort of a limping, shambling, shuffling, walk, a very peculiar gait which indicated a lack of something, a physical irregularity in some portion of that man's anatomy? Did you stand and watch him closely, endeavoring to locate

the irregularity? Yes? Well, then, you know how hard it is to locate the infirmity. At first sight it seems to be in the right knee, but a closer inspection convinces you that it is the left hip and right ankle, but soon this conclusion is banished, and you are more completely at sea than before. Now, I knew a man some years ago who had lost a leg in the late war. He wore a cork leg, and I had been told that such was the case, and so I tried to determine which it was. I made up my mind that it was the left, and was of that opinion for years, but was shown my error one day by the man himself. Only a few days later I heard a very lively discussion on that topic and a wager as to which it was, and both parties had known the maimed man for years.

What has this to do with mechanics? I seem to hear some of the brothers say. Well, just follow where it leads, and you won't find a pot of gold, like that located at the end of the rainbow, but you may find it quite similar to conditions in valve-motion irregularities.

The limping, wheezing, hip-e-te-hop exhaust of a locomotive whose valves are out, is known, I presume, to all firemen of any considerable experience, and to a man who loves a square engine the discordant, asthmatic breathing of a lame engine is enough to tear his nerves all to pieces. As I was on my way to the Convention I rode 150 miles behind an engine of the Dickson make, a model of beauty but frightfully lame. I did not sleep a wink, as the division is a very hilly one, and there she would go barking up the hills with an exhaust that might remind one of a club-footed camel trying to dance a Virginia reel, so I did not close my eyes during the seven and a half hours of ride, while my wife, blissfully unconscious of any such things as valves, slept on serenely.

Now let us try and see if we can locate these irregularities. We have here all engines coupled with the right engine leading. I have heard of engines built the reverse of these, with the left engine leading, but as I have never seen such, and the right leading is the standard, I shall, in my illustrations, use that form of engine. Of course, if any of my readers are on the other type of engine, they will have to reverse the whole plan.

These illustrations, four squares and four pair of cylinders, are joint cuts. Fig. A 1, corresponds to Fig. B 1; A 2 to B 2, &c. The squares at the corners of the square figures represent the volume of the exhaust and the point at which it is exhausted. The beginning of the calculation is the release of the steam which was taken at the front of the right cylinder and released near the back end of the right cylinder, and for convenience, in the square marked E, the

course there is as indicated by the arrow across the engine; the second exhaust being the steam which was admitted to the front of the left cylinder, then re-crossing diagonally as indicated. The third exhaust is the steam which was admitted at the back end of the right cylinder, while the fourth is the corresponding condition of the left cylinder.

In the cylinder cuts the dotted horizontal lines marked "a" indicate the atmospheric

line, the small marks "b" indicate the lead opening, while the crooked line starting from that point, or near it, indicate the steam pressure in the cylinder, while the course of that crooked line indicates the condition of the valves. The small vertical marks, "c," indicate cut-off, while the small vertical marks, "r," indicate release as it should be, to correspond with the given cut-off. The course of the crooked line, in passing these points, determine as to whether cut-off and

release are as they should be or not. The dotted vertical lines, with stem attached, marked "P," represent the piston at both ends of the cylinder, having passed release and coming to compression as indicated by curved lines upward from atmospheric line toward end of cylinder, thus showing increase of compression. R and L in each of

the four cuts, B 1, B 2, B 3 and B 4, indicate right and left cylinder.
Taking Fig. A 1, we follow the arrows from E, and find the exhausts of a uniform size, and at the same place in both ends of each cylinder. This is the engine we all like to hear going along like the wind, while the exhausts come out just as if cut off at

the top of the stack with a knife. Look at Fig. B 1, and it will be seen that steam is taken exactly at "b" on all four points, cut-off at "c" at all four points and released at "r" at all four points.

For the sake of convenience the cut off is taken at $\frac{1}{2}$ stroke, eight inches, release being at about eighteen inches, the line will be seen to gradually drop from point "c" to point "r" at a uniform rate, showing thereby the pressure of steam used expansively.

Now, we take up an engine which is lame. Her exhausts are two large and two small ones in succession, as shown by A 2; follow it up in cut B 2, and it will be seen that the steam which was taken at the front of each cylinder was continued at full pressure to a point a considerable distance beyond the eight inch cut-off, and also passed the proper point of release, while the steam admitted at the back end was cut off at a point about half way from admission to proper cut-off, and released at about fourteen inches, while the cylinder has been converted into an air pump as is indicated by the pressure line falling below the atmospheric line. This engine is in no way fit for service. She doubles all the hills, the engineers who run her are afraid to take any chances on making fly runs as she can't get there with any kind of a train. She won't steam, because the work has all got to be done by one end of the cylinder, and she must be worked so much harder that a correspondingly greater amount of water is consumed, while the irregularity of the exhaust alternately allows the fire to have a rest and then tears it all to pieces. No fireman wants her, and not an engineer on the road would have her. She has a bad name by the whole service. The conductor mentally groans when he gets her, while the brakemen vehemently curse their luck in having caught that "old scrap pile," as she is termed, while in reality it may be that her engine may be in perfect condition in all respects except her valves.

Now let us investigate this condition and try and find the cause. By a close examination we determine that the steam which was admitted at the front of the cylinder should be exhausted just prior to her reaching the lower back eighth, while that taken at the back end should be released just prior to her reaching the upper forward eighth. Now, we have the position, let us listen for that exhaust, and first of all, we must banish all thought of back-up eccentric and left side; we want only to investigate the right side now. After a time we determine that the condition as above given corresponds with the condition of this engine; it then indicates that she gets too much steam in front, hence it also indicates that the valve is too far forward. Now we have the solution. All we need to do is to pull that valve back and we are all right.

We will do it. Ah! hold on; we think of something else. We may be wrong (as will be seen in a similar case further on, *on that side*.) Let us investigate by the reverse lever. We continue to hook her up until we get the highest working notch; we find that she has two strong exhausts following each other, rather stronger than they should be, while for the next two we have no exhaust at all, but she seems to somewhat halt and hump up her back, at the same time emitting a noise very similar to that emanating from the throat of a chicken choking to death on oats. Now we know we are right, and we will apply the remedy, as the two full and two lost indicate. What! Don't be too sure, as you will see by an examination of cut 5 that we have two large ones, and two which are so small that we can lose them by hooking up close. (I make no cylinder cut to correspond to this as it is similar to No. 4, except that in No. 4 only one exhaust can be lost.)

Now we have to determine one thing. If we lose both back exhausts or both front ones then our conclusion was correct, and we will go on with that side. (I give these vacillating conclusions to show how much care must be taken in squaring an engine by the exhaust.)

As we have now considered all the chances of mistake, and find that our exhaust actually does correspond to the conditions shown in Fig. A 2 and B 2, our conclusions are absolute, the valve is too far forward and we must pull it back. We go to the go-ahead eccentric blade and lengthen it a little, but we must be sure and not lengthen it too much. A good way to determine is to move it about $\frac{1}{8}$ of an inch at a time. By this means we will have this engine so in a little while that we can calculate to the minute on a fly run, and will surprise the conductor and brakemen into praises where before there were only epithets.

Now we consider Fig. 3 in both cuts. By listening to her exhausts we determine that there are three exhausts of about a size, while the fourth is rather weak. By the same course of reasoning as before we are at first tempted to believe that three are exactly right, while the fourth is too weak. But we must not jump at conclusions. We note every condition as before, and find at last by hooking up close, that we have one a little too weak, while the other three are very strong, which shows that all are wrong, but the three are worse than the one. If we use the same means on the right side as we did with the other we can equalize the two right ones, but we still have a lame engine, as two are strong and two somewhat weaker. As the weaker side is now right, she must be working too much steam on the other side, consequently the link must be too low. Then by raising up the tumbling shaft box,

and placing liners under it, we can, by using care, raise the link just enough to correspond to the position of hooking one notch higher, so by this means we can very soon square No. 3.

And now we come to consider No. 4. By examining cut A 4, we see the four exhausts are all of different sizes. By examining cut B 4, we see that we have one about as near right as we can make it, while the other three are out in a variety of forms and positions, no two exhausts being alike. This is the club footed camel engine. In fact, she is more. She would remind one of a bow-legged chicken dancing in a pea patch. But we can right her. Reverse the remedy for No. 2, by shortening the right blade some. This, when we have equalized the last two exhausts, will cause both to be out somewhat, and can not very well be remedied, unless there are liners under the right tumbling-shaft box. In case there are, we could take out one or two, if they were thin ones, and so increase the amount of steam used there. The left side corresponds to the same side of No. 2, and requires the same treatment.

Cut 5 represents an engine which is distinguished from No 4 only by this, that instead of being right in one exhaust they are all wrong. On one side the blade must be lengthened and on the other it must be shortened, consequently you will see that she is not really in as difficult a position for squaring as No. 4.

And now, Mr. Editor and brothers, I thank you for whatever degree of attention you have bestowed on the writings of the "crank" as I am termed. On account of my signature of "Eccentric Strap" some say it is a good name for me, as Eccentric means out of true, or a distance eccentrically away from center, but I call their attention to the two words "E. S." The Strap is put on the out of true article to utilize that irregularity in the governing of a true motion. This is my hope, that I can, whether I be termed "crank" or not, adjust myself to the position in our department where I can perform at least a small portion of the duties of an

Eccentric Strap.

PALESTINE, TEX., January 31, 1889.

DEAR SIR:—I notice in January *Magazine* that "Vulcan" again claims that his "full throttle and short cut-off" with his sympathy for the lad that keeps the hot stuff in her is the proper caper. I have found it so with some engines, but I think that it is not the best way; for what would "Vulcan" do with a Roger engine that I once run, 16x 24, eight wheeler, that was put together so that she would not be square worked back of the third notch, supposed to be eleven-inch notch, hook her back to the second

notch, full throttle, she would make twenty miles per hour with a full train, but would go hopping along with three legs and the fireman would be kept as busy as a cranberry merchant in holiday time to keep the hot stuff in her, and drop her down to the third notch, with a full throttle making twenty miles per hour and "Oh! my fire is gone," would be your salute from the boy who had been trying to keep her hot—but give her about one-quarter throttle and the said third notch, and she would make thirty-five miles per hour on level track with a full train and the fire boy would have a chance to wave at his best girl and not be obliged to load her as "Acme" did. I have been there myself and many a time have I "loaded her" for the white house off to the left. I also ran a Grant engine that was a regular fiend in the shape of a coal burner. With a full throttle and short-cut-off, she would work in six inches and be square but give her about one-quarter throttle and six-inch notch and there did not seem to be any limit to her speed, with twenty loads on level track, and she was a daisy on coal. Eight tons of coal would take her 150 miles over hills that were terrors to firemen, when the engines were worked with full throttle.

I will say for "Vulcan's" benefit that my experience with the brick arch (and I fired an engine with one in her) is that dead grates are a nuisance. I had a dump grate that was a solid piece of cast-iron at first, and afterwards I had the regular open dump, that is, a slotted grate, with large open spaces and found that the latter and good shaking grates, were the best for steam and actually saved coal. I will say that I have fired engines—extension and short front ends or smoke boxes with all manner of fuel-saving devices attached, and I think that a brick arch takes the cake.

Yours fraternally,
Brick Arch.

DURING a recent visit to New York City, we had the pleasure of an interview with Mr. A. Sinclair, Editor of the *National Car and Locomotive Builder*, and author of *Locomotive Running and Management*. We are pleased to learn that the *Car and Locomotive Builder* is meeting with deserved success. It ought to be in the hands of every person connected with the car and locomotive departments of our roads. It is also a matter of satisfaction to hear that the large edition of Mr. Sinclair's book is about exhausted and that such a demand has been created for the book that its author feels justified in giving it a complete revision and adding much new matter, which will make the new volume of still greater value. The new edition will be issued during the summer months and orders are already coming in.

MR. EDITOR.—In the December, 1888, *Magazine*, Mr. Lockwood bows himself out of one untenable position with a grace worthy of the true gentleman and scholar which I have ever considered him. It now only remains for him to recede from one other position equally, it seems to me untenable; namely, "the bottom (of the wheel) stands perfectly still." When he has done this he will no longer pose as a "crank" with any show of recognition as such. In attempting to disprove the above statement the reader will excuse me, I hope, if I call his attention to some facts that may be somewhat stale, yet new to many locomotive firemen; and as technical knowledge seems to be the growing order of things in the locomotive service, I feel that they will not be out of place here. A surface has length and breadth but not thickness.

A line is the intersection of two surfaces and has length, but not breadth or thickness. The intersection of two lines is a point. Hence, a point has neither length, breadth or thickness. So in the future when you hear any one speak of a point, remember he is speaking of *something* as near *nothing* as it is possible to conceive.

To speak of the *n*th of any thing is admissible, but when we substitute the value of *n* and find it to be a *point* and then reflect that a point has neither length, breadth nor thickness, I think we are justifiable in controverting the idea that any *portion* of a rolling wheel stands still. An atom, according to Mr. Webster, is the ultimate division of matter, at least in a chemical sense; yet, each atom has its center, circumference, diameter and so forth, on any of which lines any number of points may be located. But it is not my intention to be "small" in this discussion.

Another idea that presents itself in connection with these "problems of correct mechanical principles," is the difference between stopping and standing still. My idea is that a stop, is to motion what a point is to space. Simply a cessation of motion without duration. To stand still carries with it the idea of duration while to stop does not. The most perfect illustration of this, is the pendulum. It stops at each end of its beat, but for how long? Does it stand still at the end of the beat? If the pendulum be lengthened, more time will be required in making the beat, but will it *stop longer* at each end? I think not. Again a moving object or point may *stop* going in a given direction without coming to rest. Suppose a rifle ball moving in a direction due east strikes an "armor plate" and is deflected to a southeasterly direction. Did it stand still at the "armor plate." I can not believe it did.

So with any portion of the tread of a driver rolling on the rail. It moves toward the rail, comes in contact with the rail, stops moving

toward the rail and moves away from the rail; but this does not imply *standing still* at the rail. The only portion of the wheel that I can conceive of as stopping and standing still in such a case, is the particle of metal that is detached and represents the wear of the tire and is a beautiful illustration of the distributive forces at work in the universe. In the December, 1888, *Magazine*, Mr. Lockwood reproduces a drawing from Amboy Division's article in the September number. Referring to this, I want to remind Mr. L. that the same surface is not in contact with the rail in the position *o 4* that is in contact with it in the position *o d*; also, that in comparing the bar to a wheel, he must remember that when the end *4* of the bar gets to the rail the point *o* of contact will be at some point to the left of *o* in the sketch. How it can do this and not move I am yet unable to "conceive." In the April, 1887, *Magazine*, page 212, Mr. Lockwood says: "The true axis of motion is the rail where the bottom of the driver is in contact with the same." Now the axis being "the line, real or imaginary, passing through a body on which it may be supposed to revolve;" and the line representing the place of contact not passing through a body at all, but between two bodies neither of which revolves around it, I can see no propriety in calling it "the axis of motion." It seems to me only another name for "point of support." As this point of support must move with every movement of translation, it is equally difficult for me to see any propriety in saying it stands still when the motion of translation of the whole mass under consideration, is fifty miles per hour. But here, I suppose Mr. Lockwood will interpose the information that speed of rotation counteracts the speed of translation at the bottom of the wheel. I beg pardon! Mr. Lockwood insists that there is neither rotation nor translation at the bottom of the wheel. Our friend "E. S." in the December, 1888, *Magazine*, however, does. If the motion curves in Mr. Lockwood's drawings in the same number prove anything they prove that any given point in a wheel rolling on its circumference as the driver of a locomotive on the rail never moves backward in space; with reference to other portions of the locomotive it may. Locate any number of points on one of these motion curves you please and each one will be found nearer the point of destination than the preceding one. Nowhere in their course do the lines double on themselves. They lead upward and downward, but always forward. Never backward. Let us now take some of Mr. Lockwood's statements and make a practical application of them and note the result. We take an engine making fifty miles per hour, on a straight and level track, headed for New York, and 100 miles distant. According to

Mr. L.'s philosophy the tops of her drivers are moving towards New York at a speed of 100 miles per hour, the center of axle at fifty miles per hour and the bottoms standing still. As a direct inference, in one hour the tops of the drivers will arrive in New York, in two hours the centers, but the poor bottoms would never "get there." You will excuse me, I hope, for still believing that all three points will arrive at the same time. Why any one should add the speed of rotation to the speed of translation at the top of the wheel is not at all clear to my mind. It looks like adding the speed of the sulky to the speed of the horse in a race. The speed of the sulky equals the speed of the horse both going in the same direction. The speed of rotation equals the speed of translation also, both going in the same direction.

How does this look? Speed of horse twenty miles per hour. Speed of sulky twenty miles per hour. Speed of horse plus speed of sulky equals total speed, forty miles per hour. Substitute rotation for horse, and translation for sulky, and fifty miles per hour for twenty, in the first case, and you have Mr. Lockwood's and "E. S.'s" result. For the reason that the speed of rotation must *always* equal the speed of translation, when the engine does not slip. I would not deduct the latter from the former at the bottom of the wheel. This refers of course to a point on the tread of the tire. Before closing let me place a locomotive in such a position that the bottom of none of her wheels will be in contact with the rail and yet be doing good work pulling cars for the company that owns her. The bottom of a locomotive driver is the point where a line drawn from the earth's center to the center of the wheel intersects the tread. If the engine is working on a grade of, say 100 feet to the mile, the point of contact will be where a line drawn perpendicular to the rail through the center of the wheel intersects the thread. This point will be found to be forward of the point representing the bottom of the wheel. In other words the bottom will be a "measurable" distance above the rail, and according to Mr. Lockwood's own deductions will be *in motion* when the engine is translated by rotation of the wheels. Now, Mr. Lockwood I presume you will admit that I have my engine in a normal working position and yet the bottom of the wheel moves. Had you not better come out with Galileo, myself and several "other" "old runners," that the actual, tangible portion of the wheel which we all recognize as the bottom "does move."

A. H. Tucker.

THE Toledo, Columbus & Southern railroad is experimenting with crude oil for fuel, so far, it is said, with good success.

MR. EDITOR:—It seems that the excitement incident to a Presidential election is not able to check the growth and development of railroads in this country, for we see that 7,000 miles of new road were added to the grand total during the past year, showing an expenditure of nearly \$200,000,000. While not as large as the mileage of the preceding year, yet railroad men ought to feel contented, for it is an evidence that their business is a growing one and one that is not readily disturbed in its onward march to subjugate the wilds of our continent, and thus by contact with its encircling arms bring them into civilization. A grand future, of which we can have but a faint idea, is thus ahead of us, and in the next century which is so rapidly approaching us, railroads will doubtless achieve triumphs far exceeding the expectations of the most sanguine mind. See the contrast between our present system and the early railroads, as brought before the mind's eye by the vivid word pictures of W. DeSanno in the pages of the *Magazine*, and then imagine a system as far ahead of the present as the present is of the past, and you may get some idea of what the future has in store for us.

While all hands, no doubt, are glad to hear from Mr. Rauch again, yet this joy is not unmixed with sadness to hear that the events of the Richmond Convention were of so exciting and distressing a nature as to make a man forget his marital vows or his filial affections. Mr. Rauch says the delegates ought not to be held accountable for anything they did outside of the Convention. I suppose the B. of L. F. does not desire to hold them to account for anything done in the Convention, but it is for the things which were to be expected they would do and which they failed to do, that an explanation is needed. I am pleased to find Mr. Rauch's article fully confirming my former allusions to the *hard work* performed by the men on the "L." roads of New York City, and, indeed, he goes further than I ever did in showing the difference between the "Consolidation," the "Mogul" and the "L." firemen.

"A. D." says he has no interest in a problem which brings power and fulcrum to the same point, and says that power is in the frame when the pin is below the centre. As he now states it he locates the power in the frame when the pin is below the centre; in the pin, I believe, when it is above the centre? The fulcrum, according to "A. D.," is the rail always, and the resistance, I believe, has been located permanently in the boxes by "A. D." Accordingly we would have a lever with power at one end, and the resistance between power and fulcrum on the upper half of the stroke, and on the under half of the stroke we find power and resistance at one point, and fulcrum at the

other end of the lever, while the point where power was applied before is of no account and might, according to "A. D's." theory, be entirely dispensed with, or is it a fourth factor of which there is some doubt expressed? As I have never placed the power in the frame I have not brought my fulcrum and power into proximity so as to destroy my leverage, and oblige me to cast about for a new hold with every half revolution of the wheel, as is necessary in "A. D's." theory.

While on this point I would call "A. D's." attention to the article of Bro. A. H. Tucker, on page 120 of February *Magazine*, which gives some points on this question and treats it in a manner entirely different from that of any of the contributors who have, before this, written on the subject. While Bro. Tucker feels inclined to inquire whether the discussion of these points will enable us to make better time, or pull heavier trains, he admits that we will gain knowledge by a careful investigation of the different propositions. Bro. Tucker is inclined to think that a locomotive is a locomotive, even when not turning a wheel, when laid up in the round house, when on a car, or when standing at the tank, and does not lose its individuality or require any different leverages at different periods of its existence. His illustrations are apt and to the point, and ought to leave no room for further doubt, but the one query, "Put the cylinder above the driver in a vertical position, and how are you fixed?" is the very cream of the matter, and when answered ought to settle all further questions on the wheel and lever problems. A locomotive with cylinders above the drivers is not altogether a new idea, because some of the first locomotives were built with cylinders working in a vertical position, and there is no question that they were just as powerful as locomotives of the same size and make with horizontal cylinders would have been. Now with cylinders working at right angles to the direction of the wheels on the rail, how is "A. D." going to locate his point of leverage? And how about the power in the pin part of the time, and in the frame at other times? Even in this position I find no difficulty to locate the points, fulcrum in centre of axle, resistance on the circumference of the axle and power at pin. Now let us hear how "A. D." will locate them and his reasons for doing so.

"Ash Hoe" says that I am correct in saying "that a smaller wheel will pull a larger load than a large wheel, and at the same expense in steam a large wheel will pull a smaller load over a proportionately greater distance," and yet that it did not answer his question. He says according to my idea of fulcrum in the centre of the axle and resistance on the circumference of the axle, increasing or diminishing the size of the driv-

ers would not affect the leverage, or have anything to do with the amount an engine (?) could pull." He then explains the rule governing levers, in which I fully coincide with him, and at last "A. H." makes a calculation in which he brings in the term of foot-pounds, showing that on levers in motion, speed also forms an item in the calculation, and this only confirms what I have stated before, that a locomotive will be able to do a certain amount of work, expressed in foot-pounds, no matter what the size of the wheels are, for 600 tons moved fifteen miles in an hour, is equal to 450 tons moved twenty miles. If a $4\frac{1}{2}$ foot wheel was used in the first trial, and a 6-foot wheel in the second, each driver would make 5,604 revolutions, leaving out fractions, to accomplish fifteen or twenty miles. The same number of strokes of the piston, with the same expenditure of steam, accomplishes the same work or total foot-pounds, and the locomotive when tested will show the same horse power in each case. I hope "Ash Hoe" will now understand my position on this question, and realize the fact that speed also forms a factor of power.

"Ash Hoe" asks "what is in the boiler after steam has gone down, if everything were shut air tight?" Certainly it would be a vacuum then, but as "A. H." says, it is a hard matter to produce and keep a perfect vacuum, because air is such a "slippery character" that it is hard to confine it and equally hard to keep it out.

In regard to the illustrations on draw-bars by Mr. Lockwood, I will only say that with locomotives which have come under my observation, and which are doing the same work, it has been noticed that short draw-bars wear their pins and holes much more than bars twice as long; in fact that the latter have been in use for six months of the the heaviest freight and coal train service without showing sufficient wear to make it necessary to take up lost motion.

"Canada" takes me to task for saying I did not see how smoke and dirt could be drawn into cylinders when a locomotive is running and shut off. He reasons that a vacuum is formed in the steam chest, dry pipe and of course in the cylinder. The piston does certainly suck what air it can get out of the chest and pipes, but as locomotives are always run down grades and under momentum, with the lever in the corner, the exhaust port does not open to the exhaust until the piston is just on the point of returning, and the air which it has succeeded in drawing in, will be expelled and prevent any influx from the stack. Our hard coal firemen would all be classed among the bad ones, because nearly all their firing is done while the locomotive is moving without steam, and if "Canada's" train of reasoning were correct, every piston on every hard coal

road would give trouble. Therefore let up on us a little, Bro. "Canada," and don't give us away too badly till you hear our part of the story.

"Mr. St. Peter," who talks like "Paul," asks a question or two, and wishes to be "let down easy." Just as easy as possible, "Peter." A locomotive which has its cylinders in communication with the boiler, and is admitting steam enough to move herself, if not blocked, and on which everything is steam tight, will be apt to show 130 pounds of pressure in the cylinder just as soon as the said cylinder gets warm enough to stop condensation of the steam, and this will be in a very short time. There being no outlet for the steam admitted by the throttle, it will continue to flow into the steam pipe, steam chest and cylinder until they are full of steam of an equal pressure with that in the boiler.

The surface which a piston presents to the action of the steam on its forward movement, is from seven to ten square inches smaller than the surface presented on the backward movement of the piston, and this difference is caused by the space occupied by the piston rod, on which the steam cannot get a chance to exert its power. The difference in pressure may thus be as high as 1,000 pounds, that is if the piston takes up ten square inches and the average pressure is 100 pounds. And this puts me in mind that in starting heavy trains, it can be done more readily when the pin is down on the right side and just passing the center on the left. If a locomotive is liable to slip I find that she is most liable to do it when the pins are just in that position, but while there may be as much as 2,000 pounds of pressure difference in the two pistons, it would not be noticeable in the more rapid movement, because 2,000 pounds is but a small portion when compared with the total pressure which a pair of 18-inch pistons working with 100 pounds of pressure would have to stand, for it amounts to 50,892 pounds on the large side of the piston. *Vulcan.*

MR. EDITOR:—If I can get a direct answer from "Eccentric Strap" to the following question, then I shall try and answer both "E. S." and "Vulcan." The question is based on the following quotation from "E. S.'s" article in January *Magazine*, page 21. "Ah! now you come to it. You have then sounded the key-note, for *if your centre line through axle and cylinder moves in translation fifty miles an hour, then that must be your basis for calculation, as the maximum speed is just twice that, instead of twice the bottom.* I hope Mr. Lockwood will investigate *his own statements* and if he will not concede the point of truth, at least try and explain the contradictory statements he has made."

Can't "E. S." out of his abounding grace and good nature, excuse me for the errors of fact and statement I have heretofore made *and confessed*, and only hold me to the "truth" of those for which I stand committed!

If understand "E. S." aright, the above statement relates to a wheel in contact with the rail, whose centre is moving in a line with the rail at the speed of fifty miles per hour. "E. S." admits that this wheel has maximum speed at the top twice as great as the speed at the centre, therefore one hundred miles per hour. Now if it has a maximum speed at the top twice as great as at the centre, it must have a minimum between the centre and the point of contact with the rail.

Question. Where is the minimum point on the wheel located, as contra-distinguished from the maximum—the top, and what is the speed at this minimum point.

Wm. E. Lockwood,

GLEN LOCH, February 4, 1889.

The Torpedo Nuisance.

MR. EDITOR:—One of the rules and regulations of one of the Eastern trunk lines reads as follows:

When it becomes necessary, from any cause, for a train or engine to stop on the main track between stations, or to stand at a station longer than the usual time, or to proceed only at a slow rate of speed, the rear brakeman must go back instantly with the danger signals (red flag and torpedoes by day, red lamp and torpedoes by night) at least a half a mile, or twenty telegraph poles, to stop any following train or engine; he must display the danger signal in a conspicuous manner, and remain there until called in by the conductor. As an additional precaution, he must immediately fasten a torpedo to each rail, which must not be removed, and when called in he must fasten another torpedo to the rail, ten telegraph poles from the rear of the train.

If the train is stopped on a curve, or if the weather is so foggy or stormy that the danger signals on the rear end cannot be seen for a distance of half a mile, the flagman must not be called in, but must remain to flag, stop, and get on board the following train. In all cases, when called in, torpedoes must be fastened and left to the rails before returning to the train.

Should any detention occur on single track, or the opposite track be obstructed, the baggage-master of a first-class train, or the head brakeman of a second class train, must instantly go forward a like distance, using the same precautions to stop approaching trains or engines.

The engineer is authorized, and it is his duty when his train stops, to order the flagman back with danger signal by giving three blasts of the whistle. See Rule 11.

Conductors and trainmen have no right whatever, at any time, to presume that other trains are not closely following or approaching.

This rule is imperative, and conductors and engineers will be held responsible for its strict enforcement, and they may command the services of any employé of this company to fully and promptly carry it out.

Engineers when running over torpedoes must come to a full stop, and then proceed slowly, with their train under full control, until the cause of danger is known, or the obstruction is reached and passed.

These rules would seem to indicate a de-

sire to avoid accidents by rear end collisions, but if reduced to actual practice and strictly adhered to, they would greatly increase the very dangers which they were designed to prevent. The rule requires a runner to bring his train to a full stop, *whenever he runs over torpedoes, and then to proceed slowly, and with train under full control, until the cause of danger is known.* Now on said road certain local freights, leave one of the termini two hours ahead of some through freight, but owing to a rush of business these local freights are often delayed, and sometimes before reaching the other end of the division the local freight is back on the time of the through freight, and the runner of said freight finds the track loaded with torpedoes; it being a matter of fact that sometimes as many as twenty-five and thirty torpedoes, may be found in a distance of as many miles. According to the rules the through freight must make that many full stops, and while making them its flagman must place the torpedoes for the next train, which is quite likely to be running extra to it, and also followed by another one, for which it may be carrying signals. These full stops, *the proper placing of torpedoes,* and starts from a dead stop, will in each case take ten minutes at least, with a heavy train such as is usually run on Eastern roads, and twenty of them would waste two hours time in a distance of thirty miles, and instead of proving a factor of safety, the torpedo and its rules would be productive of danger. Instances are known where seven torpedoes were found in less than a half mile run, and no train or other obstructions were to be seen. Trains making these torpedo stops, would inevitably get behind time and be found trespassing on the rights of other trains, and these on others, and if all lived up to the rules not a single train would ever be on time, and this irregularity and uncertainty in regard to the whereabouts of trains, would be productive of disaster, even on a double track road, and much more so on single track.

Coming to the point, what does a torpedo tell you? It says *somebody has been here,* presumably a flagman in the discharge of his duty, but beyond this fact it gives you no information whatever. If you are conversant with the time table of your road, you know that some trains are ahead of you, therefore the torpedo fails to give you any new information, for while it says: There is a train ahead, it fails to give any intimation of how far ahead, or how long ago the torpedoes may have been placed on the track. The runner may therefore bring his train to a stop a score of times, and never see the preceding train, indeed, said train may be safely over the road and at its destination, while the following train is still making *torpedo stops* for nothing, only to lose time thereby and endanger its rear end.

It would seem that, with the present advance in mechanical knowledge, some more intelligent device than a torpedo might be adopted, to warn trains of the proximity of another one in their front, if it is not deemed safe to depend upon the flagman to do so. A few common sense rules, in regard to the use of torpedoes, might also make them of some use, for instead of being indiscriminately distributed the manner in which they were placed, or their number might be made to give information of real value to the following train.

There are also a number of different automatic devices worked by simple contact with certain levers or with electric buttons, which will signal trains following, and announce either the distance which leading trains are ahead, or the time which has elapsed since they passed said signal, or any other point, if, preferred miles ahead of them. A little expenditure in this direction ought to be a profitable investment, for it would insure safety and dispense with the ever recurring expense for torpedoes, which must be quite an item when they are used in the manner above indicated.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during February. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

These devices may be appropriated by anyone, and are therefore of interest both to the public and manufacturers, and copies of the patents will be mailed at 15 cents each by Mr. Brock. Repetitious labor may often also be saved inventors by an examination of this record:

Adjustable car wheel, G. G. Lobdell.
Link guide for car coupling, N. L. Post.
Car brake, G. H. Reynolds.
Car window, N. McCaull.
Dumping car, C. Barrett.
Coupling for steam or air brakes, S. N. Goodale.
Steam boiler, M. Smart
Sash holder for car windows and blinds, C. P. Mixer.
Locomotive for ascending inclined planes, N. Riegenbach.
Car brake, G. H. Merriam.
Car wheel, S. P. Smith.
Dumper for railroad tender, T. C. Hendry.
Spark arrester, H. F. Reiner.
Railway tie and chair, L. A. Towne.
Railway switch, C. F. Keller.
Seal lock for cars, J. H. Lyon.
Locomotive, S. Skillman.
Steam car brake, J. T. Bassett.
Hinged joint for car seats, D. W. Perry.
Car coupling, L. Marshall.
Car coupling, J. D. Riggs.

CLEBURNE, TEX., January 31.

MR. EDITOR:—I penned an article for the March number already, which I presume you have received in due time, and which will require considerable space, but as I have now received the February advance copy, I see that it behooves me to indite another small article, for which I hope you will have ample room in the March issue, but if not, it can wait until the next issue.

First, in answer to "Vulcan" I will state that I never did disagree with him as to the place where the fulcrum was located, but was convinced that the place of weight, was not located in the boxes, as I formerly thought, but as I penned a very extensive article on that subject, previously, I shall not take up any of your valuable space in its further discussion.

"Ash Hoe" seems to think it a hard matter to tell which side of the fence I am on, but I thought my meaning was made clear, because the statement, stopping a moment, can have only one meaning; only one interpretation, and that is, that the wheel in its rotary motion, has to *cease to move in its rotation*, for a moment, then to recover itself and go on at an ever increasing speed. This I said, was the veriest folly, and so it is, because, should that portion stop as stated, the balance in still proceeding on its rotating mission, would sever itself from the procrastinating portion, and put the engineer to his inventive resources to devise a means of getting his engine home, minus his wheels.

Your boiler, in being perfectly air tight, would undoubtedly have a vacuum under the given conditions, and although there can be absolutely no perfect vacuum, there can be a very extensive partial vacuum. This is verified every day with all manner of force pumps, as can be demonstrated by making an air hole at any point of supply, i. e., at a point back of, or below the receiving valve, as your air hole admits air it becomes impossible to create a vacuum, hence you have air in your pump instead of water, also all manner of lifting injectors are governed by the same principle. The jet valve, being opened, is said to suck the water up from the tank, but such is not the case. The fact is, the jet of steam rushing out of the overflow, acts the same as a plunger would; it expels the air from the feed pipe and the atmospheric pressure forces the water up to the injector.

I can give you a fair example of an engine which was much like the one you quote. The engine I here refer to was a 15x24 Baldwin in passenger service at the time I mention, running between Galveston and Houston, equipped with two Baldwin pumps, no injector, and at that time came in frequently in the evening on her run, with a bare two gauges of water. The hostler would put her in the house so, only two gauges, and in the

morning, when he went to take the train to the depot, a distance of a mile and a quarter, she would be full to the dome. Tableau! You all know what it is called. The jacket, and dome, and sand box, would be one solid mass. It caused a kick, and the Master Mechanic came to James Tarpey, at that time night hostler at Galveston, and spoke to him about filling the No. 2 up so full before taking her in. Mr. Tarpey had noticed a time or two, a sound as if the pumps were working, and so that night an investigation was made. The engine was put in as usual, with only *one* gauge of water; she cooled down and then was examined. There was no water to be found in the bottom gauge, but soon the hostler and Master Mechanic went to the engine, and by listening, could tell distinctly that the pump was working, and it did not require a very great while to find two gauges of water in the boiler. The hostler was, of course, exonerated, while the No. 2 received a reprimand for her inordinate appetite for water, in the shape of having her pumps shut off. There was no more trouble and no more tableaux. Does this prove the existence of a large partial vacuum? If not, how can it be accounted for?

A. H. Tucker has just expressed himself according to my convictions to a dot. You will undoubtedly remember that I said in a former article, over a year ago, the cross-head moves forward always, in relation to the ground over which we travel; but, as to the motion of the machinery of a locomotive, I am convinced that in speaking of the motion of any portion of that machinery, we are to leave the earth out of the question, as it does not contribute anything but the roadway. Now, I believe I can help Bro. Tucker out in his argument a little. When I first went to work on this road I was consigned to a pile driver. She was a traction engine as well as pile driver, and could, at a moment's notice, be converted into a traction engine, in other words, a locomotive at the will of the engineer. She had an upright boiler and a pair of 8x14-inch cylinders, had regular connecting or main rods. But cylinders and rods were on the deck of the car, and there was arranged a separate gearing by which the engineer could throw out her power of translation at will; then with one movement of the arm he could transmit the motion of that machinery to the wheels underneath and she became a locomotive. Could you say that cross-head moved forward only? I think not, as you would be viewing it from its true position, in relation to the machine of which it was a part. How does a link travel in the motion imparted to it by the eccentric? Would any of you say the link traveled only forward? I guess not. And yet, it does so even more than the cross-head, but I presume everybody will admit that the link travels backward as well as forward.

ward while the engine has translatory motion.

I infer from Bro. Tucker's last paragraph that I am about to have him enlisted with me as against Mr. Lockwood. I shall not be sorry to see him enter the field.

M. St. Peter asks a few questions, on which I will give my opinion, for investigation. To the first question I will answer that the pressure could never again reach boiler pressure, because in passing out through so small an opening, the steam would be in a very great degree expanded, by which it would lose its energy and condensation would begin to take place. Then in the cylinders, away from the heat by which it was created, a further condensation would take place; hence, I do not think it could ever reach boiler pressure again.

No. 2; no. The work done on the front of the cylinder would be greater than on the back, because in the front there is nothing but space, consequently you get a full cylinder of steam, while on the back you have a portion of that space taken up by the piston rod, which will, of course, cause that end to use just as much *less* steam than the front as the piston rod contains cubic inches.

As we generally reserve the best of all for the last, so now do I in this. I am truly pleased that Mr. Rauch did not take offense at what I wrote, as it was not couched in such terms as I might have wished afterwards, but my reasons were given in December number. I am also pleased to note that Mr. Rauch gives me credit, in a large measure, for writing for the instruction and amusement of others after having made such a hard trip as I quoted at that time. I will say that very nearly all of my articles from Galveston were written under the same conditions, and now, as I write this, I have just come home from my labors as night hostler, where I regularly put in thirteen hours out of every twenty-four in the care of the engines running four ways out of this place. I don't usually have much time during the night but for work and reflection, but then, as necessity is the mother of invention, I believe I have a great deal more time for this kind of labor than the "pets" of which Mr. Rauch made mention. As all I have to think of is to get the fires cleaned in from six to twelve engines, get coal put on their tanks by the old-fashioned Armstrong process, give them sand and put them in the house with fire in them, then every hour or so, go the rounds of all I have in. In addition to the work of taking in and out, and attending to their wants, filling up with the injector and adding fuel to the fire in order that I may have them ready for a call, which is not issued until one hour before the time for departure of the train. I don't have to worry myself to death about the fit of my last suit, or the

way my piccadilly collar sets, and conjecture and cogitate as to whether it would be advisable to wear my patent leather boots and buff kids, or my new low quarters and plum kids to-night, when I go down the street with my all but invisible walking stick gently grasped in my right hand and my silk hat smoothly polished and set jauntily over my right ear. Oh, no, indeed! I can calculate that I will go to the house, get breakfast, go to bed and muse awhile and then sleep until dinner time, get up, dress very ordinarily, eat dinner, fill my pipe and figure out a line of attack for the next issue of the *Magazine*, and go to bed again, and so on, day by day. But it is not so hard as the south end was, so I will give a little idea of what it means to be a *fireman* there.

The engine I fired was a 17x24 Baldwin Mogul, the tank was the standard Baldwin, 2,800 gallons capacity in water space, and spaced originally for seven tons of coal, the board, however was moved back to within six inches of the man-hole. The coal would be piled up as high as it would hold on, and we would start. Our train was quite an item, forty-five loaded cars being rated as a full train, but in addition to that we had to pull from five to twelve empty water cars of 4,600 gallons capacity away from Galveston to Alvin or Duke, twenty-nine and forty-four miles distant, respectively. Then coming in we would take them filled, from five to fifteen in number, in addition to all the cars we had, and sometimes we would have five or six cars in addition to a full train. The engine had a very low brick arch, and to make it convenient I had to fire with four scoops of coal. It would usually take the time we used in passing three telegraph pole spaces to put in a fire. Then she would go five telegraph poles without any more firing. In 59½ miles I would have all down from the sides and be pulling down from the back end. I would there take a dump and a half of coal, four tons to the dump; not very good weather for piccadillies and satin ties. We would sometimes, in bad weather, have to run for water, and the tanks are usually fifteen miles apart, all but one place, there it is twenty-two miles. Think of that! Two thousand eight hundred gallons of water evaporated and more run for in fifteen miles (but as I said, this was in bad weather) while the dump and a half of coal would be more than half consumed on reaching Seeley, 33½ miles from the coal bin.

Come down to Texas from your "Elevated" perch, some of you, and learn what *firing* is, and then I'll venture to say you've had a good job and left it. The pay here on Moguls is \$2.35 per day of 100 miles or less; all in excess of ten hours to be paid twenty cents per hour.

Should I venture again to the frozen north I would be pleased to call on Mr. R., and would undoubtedly do so, but my memory of the f. n. is too fresh to venture up there in the winter time. The long years I put in up there, and the hard winters, when we used to tie the broomstick to the thermometer to let the mercury run down on, are yet fresh in my memory, so I will remain for awhile in Texas, the State of my adoption.

Yours fraternally,

Eccentric Strap.

MARION, IOWA, February 13, 1889.

MR. EDITOR:—In the *Magazine* I have lately noticed a lot of discussions on the following subject: Where does a locomotive obtain its fulcrum, at the rail or the axle? Forney says if we regard the fulcrum as the point which is fixed in relation to the locomotive, it is at the center of the axle, but if we refer it to the surface of the earth, then it is at the top of the rail.

"Ash-hoe" gives a good description of the tractive power of a locomotive and how it is calculated, with regard to the pressure on the pin, either on top or bottom quarter. I agree with him that the power is the same in both positions. It is only during the forward stroke that the pressure on the pin moves the engine ahead. The forward pressure of the pin at the axle is greater than that exerted against the axle in the opposite direction by the cylinder head and frames. It is this excess of pin pressure that moves the engine and which is the tractive force during the forward stroke. During the backward stroke the piston is pushing the axle backward, and the pressure against the front cylinder head is pulling it forward. The latter then exceeds the former, and the difference between the two is the force which moves the engine forward. So we see the difference is the same in both positions of the pin, so from this cause the engine can not pull more when the pin is above the axle than when it is below.

F. T.

[Let us hear from you again and often.—
ED. MAGAZINE.]

MR. EDITOR:—In answer to Mr. Tucker's Question on momentum: Momentum of a body signifies its quantity of motion and is reckoned according to the number of particles moving and the velocity with which they move. The momentum therefore varies as the quantity of matter multiplied by the velocity. $M = \text{momentum of a body, } Q = \text{quantity of matter, } V = \text{velocity. } M = QV. Q = M \text{ divided by } V, \text{ and } V = M \text{ divided by } Q.$ Since there are two elements entering into the momentum of a body—namely, its quantity of matter, usually expressed in feet per second—therefore momentum can not be measured either in pounds or in feet; being in its nature unlike either. The com-

pound word foot-pounds is employed for the unit of momentum wherever the unit of quantity of matter is a pound and unit of velocity is a foot per second. A ship weighing 336,000 pounds is dashed against the rocks in a storm with a velocity of 16 miles per hour; with what momentum did she strike? Answer, 7,875,436 foot-pounds. 5,280 multiplied by 16 equals 84,480 feet in 16 miles. 60 multiplied by 60 equals number of seconds in a minute, which is 3,600. 3,600 divided into 84,480 is 23.4383 feet in a second. 23.4383 multiplied by 336,000 pounds is 7,875,436 foot-pounds.

In reply to "Eccentric Strap": I have also heard the use of both terms, diaphragm plate and deflecting sheet. On the P. R. R. engines the plate or sheet (as I have been informed and never knew to the contrary) was usually placed at the height of six (6) rows of tubes or flues from the bottom in front end. And that was considered the standard for setting the sheet for an engine; and if the engine would not steam to raise the sheet, and if she would not then steam, something else was the matter. I have known sheet to fall on one side and engine steam badly, and when replaced would work all right. I would like to have other brothers' opinions on this also. This is my first attempt and I would not like the brothers to criticise me too severely.

Respectfully,

A Philadelphian.

MARION, IOWA, January 30, 1889.

MR. EDITOR:—One of our members asks what is steam before it reaches the external atmosphere.

Steam is water changed into gas by heat and in its true state is invisible, the white cloud which escapes from the exhaust pipe of a locomotive is not true steam but is steam in a condensed state through coming in contact with the cold air.

F. T.

DERBY LINE, Vt., February 8, 1889.

MR. EDITOR:—Will you please tell me through the mechanical department, how to find the pressure of a cylinder 15x22, engine carrying 130 pounds pressure?

Fraternally yours,

GEO. E. HEATH,

The Locomotive.

H. K. PORTER & Co. (Pittsburgh) are about completing six small locomotives to go to Buenos Ayres,

THE Taunton (Mass.) Locomotive Works has come under new management, and the intention is to add improved machinery and put up new buildings, putting the shops on a basis for competition with other locomotive shops.

THE Pittsburgh Locomotive Works are very busy at present. They are turning out about ten locomotives a month, most of them being very heavy engines. During a recent visit to the shops we saw in the erecting shop a mogul engine

for the Chicago & Calumet Railroad, with cylinders 19x28 inches, driving wheels 50 inches diameter, and a straight boiler 61 inches diameter at smallest flue. The total weight of the engine in working order will be about 120,000 pounds. This is the heaviest mogul engine we have ever seen. The boiler shell is made of 5/8 inch steel. They have lately delivered to the Union Pacific some engines built to the company's drawings and specifications. Among other work recently finished were eight wheel engines for the L. St. L. & T.; ten-wheelers weighing 113,000 pounds for the St. L., A. & T. H.; and some eight-wheelers for the Vandalia line, the latter to carry 160 pounds' steam pressure.—*National Car & Locomotive Builders.*

A TAUNTON (Mass.) correspondent writes: Business here is good. The Taunton Locomotive Manufacturing Co. are working day and night (two gangs) to keep up with their orders on printing presses manufactured by them for the Huber Printing Press Co. Locomotive work is somewhat dull, although they have orders on hand now for about 11 engines, with the prospects for more. Nothing has been done in the building of engines for the last six months; a few repair jobs have been received during that time. The Mason Machine Works are busy on cotton machinery. Printing press work is falling with them somewhat. They manufacture presses for the Campbell Printing Co., of New York and Chicago. They are about starting on some narrow gauge engines (The Erie) for the Boston Revere Beach & Lynn Railroad. There is a rumor that Messrs. Emery & Donnelly, formerly with the Campbell Printing Co., are about to commence business on their own account, making presses. They have received letters patent on an loking device for printing presses, and have now specifications filed for a complete printing press. The East Taunton Iron Works, which have been idle some years, are about to start up under new management, making wire for telegraph, telephone and electric light purposes. They are to draw their wire under a new process, for which letters patent were recently granted to Mr. Williams, of this city. The tack and nail business is rather dull just now.

The following is a record of locomotives built during the last year at the Baldwin Locomotive Works, Philadelphia, Pa.

	A	B	C	D	E	Total
January . . .	—	1	10	17	26	54
February . . .	—	—	17	4	34	55
March . . .	—	—	17	24	21	66
April . . .	—	—	17	34	5	56
May . . .	—	—	30	30	5	65
June . . .	—	—	16	13	27	56
July . . .	—	—	9	33	14	56
August . . .	—	—	25	3	37	65
September . . .	—	—	13	26	27	66
October . . .	—	—	20	27	28	75
November . . .	—	—	7	30	21	58
December . . .	1	—	7	30	27	65
	1	1	188	275	272	737

A.—Rack rail engines.

B.—Special single driver engines.

C.—Passenger engines, 4 wheels coupled.

D.—Six wheels coupled, freight and passenger.

E.—Consolidation and octapod engines.

All engines built during the last year were delivered on time. At present they are delivering some of the engines ahead of time.

THE new Canadian Pacific Railway elevator building at Port Arthur is being pushed rapidly. Already 2,700 piles have been driven into the ground for its foundation. The average length of the piles is 30 ft., and they are driven in blocks of twelve each, surrounding which are boxes that are being filled with concrete. On this concrete, also supported by the piles, will be set blocks of granite measuring three feet square on the surface, 18 inches in thickness.

The Shop.

THE Georgia Pacific Railroad Co. are building a wood-working shop 60x175 feet at Birmingham, Ala.

THE Newport News & Mississippi Valley Railroad Co. will build shops at Lexington, Ky., if \$35,000 is donated.

THE Alabama Great Southern Railroad Co. will build an addition to their machine shop, at Birmingham, Ala.

THE shops now being built at East Los Angeles by the Southern Pacific Railway will comprise 15 large brick buildings.

THE Rathburn Manufacturing Company, Milwaukee, Wis., has been incorporated, with a capital of \$10,000, by Francis W. Kimball and others, to manufacture tools and implements for railway construction and operation.

THE Grand Trunk Railway Company have declined the bonus of \$100,000 offered them by the authorities of London, Ont., for the establishment of car works in that city. The works will be built at Stratford, and operated in connection with the immense machine shops recently erected there by the company.

THE shops of the Union Pacific Railroad, to be built at Cheyenne, Wyo., will, it is said, give employment to 2,000 men. It is reported that Denver offered \$500,000 and perpetual exemption from taxation if the shops were located there. Cheyenne will expend something like \$100,000 in the interests of the company, and furnish free water.

Car Notes.

THERE is a proposition to turn the old agricultural works at Peru, Ind., into a car manufactory.

THE Dickson Car Wheel Works has been chartered, to manufacture car wheels at Houston, Texas.

THE Lafayette Car Works are at work on an order for one hundred refrigerator cars, which will keep them busy for some weeks.

THE Boston & Maine has let contracts for 20 passenger cars, the order being divided with the Locomotive (N. H.) Car Company and Osgood, Bradley & Sons, of Worcester, Mass.

THE Canadian Pacific Railway Company are building large car shops near Montreal. The company intends to build their own cars, many of which have heretofore been bought in the United States.

AN extensive branch foundry is to be erected at East Chicago by the C. A. Treat Car Wheel Works, of Hannibal, Mo. It will have a capacity of 400 wheels per day, which means the melting of 120 tons of iron.

THE Indianapolis Car Manufacturing Company is building 1,000 box cars for the Chicago, Burlington & Quincy, which it is to have delivered by February 15th. They have still 300 cars to build for the Atchison, Topeka & Santa Fe.

THE Southern Iron Car Line, of Atlanta, Ga., recently placed in its service one hundred 60,000-pound box cars to run between points south, west, and north. They were constructed under the patents of the Iron Car Company, of New York, with steel and iron frames, but with the ordinary box.

THE 30 passenger cars which the New York and New England is building at Norwood shops are now nearly all completed. They are 60 ft. long outside of the end sills, and 9 ft. 8 inches wide outside of side sills, and 10 ft. 5 inches from the under side of sill to the top of roof. They are mounted on two 4-wheel trucks and 7-ft. wheel base, and have steel tired Paige wheels, M. C. B. axle and journal box, and the Koss Meehan shoe. They are also fitted with the quadruplex elliptic concave spring for bolster springs, the Hale & Kilburn seat arm, and the Russel & Irwin door check.

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
Maltby House, Washington, D. C.

MARCH, 1889.

It is very sad to contemplate that the Methodist Episcopal Church will not allow its missionary women to perform the rite of baptism. Probably no church in the world has expended so much money or sent so many missionaries to foreign fields as has the Methodist. And yet after the missionary women have suffered every hardship, endured every privation to convert the heathen and succeeded, they are not allowed to baptize even the women and children. Now if baptism is a saving ordinance and these heathen are deprived of it because they were converted by women, who were sent there for that very purpose, and they are lost thereby, who is to be responsible for these souls? It looks very much as if the sin would have to be laid at the door of the M. E. General Conference, that holy and righteous body which would not admit its women-delegates. The orthodox churches are very good institutions but their women members have said "nothing and sawed wood" about as long they intend to. They will have an equal voice before a great while or somebody else will saw the wood to keep the gospel fires burning.

PEOPLE who live in climates where it is always warm and fair miss one of the keenest enjoyments of life, the delight that is felt at the approach of spring. Only those who have been shut in for five or six long months, with the wind sweeping around the house and rushing in when the door is left ajar, the greer grass withered and brown, the flowers all dead, the birds departed—only those can realize the joy that is experienced at the approach of pleasant weather. The first warm days come like a messenger of hope. We throw up the windows with hearty welcome to the balmy air. With eager fingers we pull away the rain-soaked leaves to coax forth the sleeping plants. The tiniest blossom at this season seems more beautiful than all the wealth of bloom in the heat and brightness of summer. It is the hint of the resurrection that makes glad our souls. And when a belated storm sweeps down and drives us back to the forsaken hearth we smile with the thought: It is the last, for spring is here. They who live where it is perennial summer,

miss this exquisite experience, for it is not possible fully to appreciate a blessing that is always with us.

But if we have lived up fully to our possibilities, the long winter has not, been without its compensation. There is no time like the quiet winter evenings for reading and study, for the fancy work that beautifies the home, for the fireside games and music, for the renewed acquaintance with our own family. It is the close and intimate companionship, which the cold weather makes necessary, that strengthens those ties which may become loosened by absence and separation. But it is characteristic of human nature to tire of a sameness, however charming may be the situation, and so we hail with gladness the coming of spring. With that confidence in the future, which is a blessed inheritance of humanity, we sweep and garnish, we plan and we hope and make ready for a happy summer. When the leaves begin to fall and the chilling winds to herald the approach of autumn, may we look back with contentment on the fulfillment of every bright anticipation.

THERE is a tender and reverential strain in the nature of women which makes them cling to sweet associations as something precious and sacred. It is the mother who weeps over the baby shoe, the curl of hair, the faded picture. It is the wife who cherishes the withered flowers, the loving letters that tell the story of the courtship. The maiden parts from her lover and spends the hours gazing at the stars and dreaming of his return. Even the little girl has her dolls and her pets which are guarded with gentle affection. Men have their moments of sentiment, but they are few and brief. This is partly due to their more practical nature and partly to their manner of life, busy, bustling, out in the world, making their way among men, meeting the demands of competition, an existence which leads them away from the retrospective. The occupations of women are generally such as permit the exercise of memory, and being less ambitious than men, they dwell more in the past, especially as the years accumulate and the rose color fades out of the sky. Women are rapidly entering industrial fields; the struggle for subsistence, the desire for independence are drawing them away from home; life becomes each day more crowded with cares and duties; but the tenderness, the reverence, the fidelity of the womanly nature will never change. They were implanted at the creation and all the education and the training and the opportunities that are given only render her the more capable of exercising these qualities in a higher and nobler degree. The future will see a being of a more perfect development but possessing still all the traits of character that through the ages have made her loved, valued and honored.

A VERY amusing paragraph has been going the rounds of the newspapers in relation to Miss Mary Garrett, sister of Robert Garrett, of Baltimore, and the wealthiest unmarried woman in the United States. She is the daughter of John W. Garrett, President of the B. & O. railroad. Although he had a dozen secretaries, she was his counselor. He made no great investments without consulting her. Had he taken her advice "he would not have wrecked himself on the shoals of ambition." The same might be said concerning her brother. She is now the controlling influence in the Baltimore & Ohio. After recapitulating all her remarkable business qualifications, the article closes by assuring the readers that "she is not a strong minded woman." Not a strong-minded woman and yet can control one of the greatest railroad systems in the world! How absurd! This illustrates the popular fallacy concerning "strong minded." The papers are doubtless trying to convey the idea that she is not going over the country making woman suffrage speeches. If Miss Mary Garrett votes as a stockholder in a railroad, it is hard to understand why she should not vote as a tax payer in a city. In view of all the facts it will strike most people that she is an exceedingly "strong minded woman."

DENVER, COLO., February 15, 1888.

To the Editor of *Woman's Department*:

I am in Colorado visiting relatives and receive the *Magazine* every month. I looked to see what DeSoto Lodge, No. 8, had to say, also St. Louis Lodge, No. 21, but was disappointed. There are Messrs. M. Rabbitt, J. Christofel, F. M. Gratiot, of DeSoto Lodge, also Messrs. J. W. Strong and Chas. Becker of Lodge No. 21, who ought to devote a few minutes writing to the *Magazine*. If I had the knowledge these young men possess, the readers would know what good Brotherhood boys are.

I agree with "Engineer's Wife" in regard to flirting, as the boys ought not to be flirting when they have a dear wife at home, but some will wave at the girls when they are passing through towns, in spite of all. Young men that claim to love some young lady best and dearest, devote your time and thoughts toward that one, and do not flirt. I believe there is a hereafter as well as the present time, and choose good in preference to evil. Young ladies and married ladies never think of flirting, as it is far worse for us and there is no use in us setting a bad example.

I find Denver to be quite a pretty city, but here where my relatives live, on a ranch six miles from town, is much nicer. In pleasant weather I go driving and view the snow-capped mountains, which are very beautiful, and especially so when the sun is shining. "Still there's no place like one's native home." With kindest wishes for the Brotherhood men, also for the Editress and *Magazine*, I close. Very respectfully,

Lulu Whitehead.

OUR BABY.

On a lone and quiet hillside,
Sleeps the baby that we love;
Rests his little form so precious,
But his spirit is with God.

Long and patiently he suffered,
Ere the messenger said, "'Come,
Leave this world of care and sorrow,
For a brighter, better home."

How our hearts were filled with anguish,
And we sometimes wondered why
It was ours the Lord had taken,
And passed so many others by.

But, O God, forgive our murmuring,
For, although from us he's gone,
If we're faithful in thy service,
We shall go to him ere long.

We shall go to that blest harbor,
Where not only baby waits,
But with him there's other loved ones,
Standing by the pearly gates.

Dear ones whom we told at parting,
We would meet on that bright shore,
When this life of toil was ended,
And our work on earth is o'er.

Teach us then to be, O Father,
Just and faithful, full of love,
That we all may be united,
In that happy home above.

— Mrs. D. C. W.

' DERRY STATION, PENN., January 25, 1888.

To the Editor of *Woman's Department*:

Another year, with its sunshine and shadows, has glided into the mighty store-house of the past. On its unerring record has been written by the remorseless pen of Time, the one word, "finis." If the old year has, in some instances, been unkind to us, let us forget the evil, and remember only the sunshine and goodness that has been scattered broadcast around us with unstinted and lavish hand; and let us hail with hopeful hearts and better resolutions the new year that is given us, knowing that each of us in a measure, determines for ourselves whether this year shall be one of blindness and error, or happiness and hope fulfilled. I hope the *Magazine* does not think Chestnut Ridge Lodge dead or asleep, as it is so seldom heard from. The truth is, it is very much alive, but in spite of their many good qualities, the boys are awfully backward, so far as letter writing goes. But I would suppose by the number who have assumed the rôle of "benedict" during the past year, that they are not so quiet and unassuming where the heart is seriously concerned. The boys attend Lodge regularly and in spite of bad "Rhodes," they manage to escape all tardy "Marks." During this wintry weather they buy their "Cole" by the ton, and by their bright, cheerful fires, thaw out many an "Aiken" finger of some doubting "Thomas." All those who yet remain in a state of "single misery," manage to "get there Ell," and none more frequently than the worthy Vice Master. In the evening he "Waddelleth" to the home of his lady love. When the cock croweth, he taketh his departure, and weepeth because morning cometh. Selah!

Lizzie Marks

DEAR DEPARTMENT:—I have been reading some of the letters on the "woman question," and I really wish I could get all the light on the subject I need. We hear so much said of late about "woman" and "woman's work" that we almost wonder if *woman* is a new creature of this century, or if the women who lived in earlier times did nothing. We find that we are not the first women of the world, and that there were some bold ones and some good ones in ages past; witness Zenobia, Joan of Arc, the mothers of Bacon and Washington. We hear much about being broad-minded, etc. I wish some one would show us just what is meant by that. I like better than the term "broad," the term "rounded." To be broad without depth is to be flat. Talking of "rights," and "mission," and all that does not give us a clear idea of what is expected of us. Judging others by myself, there is much more for us to attain in knowledge, wisdom and usefulness. Let us learn all we can that is useful and ennobling. Let us take up each of life's duties as bravely as possible, as it comes to us, and, filling our places as full as possible of all good and noble thoughts, words and actions, be as broad in our culture, as independent in our actions as we can, and be right.

I confess I do not see just how receiving the right of suffrage would benefit us. If anyone can explain this matter satisfactorily, I would consider it a favor.

Cousin Nell.

[We call upon our readers of both sexes to answer this last question according to their ideas.—Ed.]

ST. LOUIS, MO., January 20, 1889.

To the Editor of *Woman's Department*:

I will just drop in a few moments and tell you all about the second annual ball given by Harmony Lodge, Ladies' Society, B. of L. F. It was given on the 20th of December, at Euterpe Hall and was a grand success. Everybody seemed to enjoy themselves, and we hope they did.

Mr. and Mrs. C. E. Amos led the grand march, which was very nice. The ladies got the supper themselves, which was splendid. They danced until about 11:30 when the supper march was called and everybody marched up to supper and found the table loaded with everything good and enjoyed it very much. Bro. Ed Murphy, a member of Lodge No. 21, came up in the dining room and made himself useful. He put on a white apron which became him beautifully, but the apron did not keep him from spilling the oyster stew on his cuffs. In trying to hold two plates on one arm, one of them turned over. We thank Bros. Ed and W. A. Murphy for their kindness to us on that evening, also Bros. Van Horn, Wilson and Amos, of Peace Lodge, No. 109, for helping us at the door; we could not have gotten through without them. Bro. White made a mistake and got on Bro. E. Murphy's foot, which caused him to have to go home before he wanted to. Mr. White was real lively that night. I think going to Atlanta did him good. Mr. Ed Murphy has got the fireman's swing to perfec-

tion. About fifty-five couples went up to supper. The last ball was more of a success than the first and we hope the next will be a greater success. We missed Bro. Lullman very much, he is always so jolly; also J. W. Leathers, who was hurt in a wreck on the road. He was badly burned and was not able to go, and will not be able to attend the Firemen's ball; Ed Fish, a member of Peace Lodge had his leg broken in a wreck and was not able to go, but he will be able to go to the Firemen's ball. We met a number of our old friends at the ball and we hope to meet them at the Firemen's ball. We are always glad to see the Brotherhood boys. I will close with my best wishes for the Ladies' Society and the Brotherhoods.

A Fireman's Sister.

DOMESTIC.

Never find fault with your wife before others. Per contra, remember the counsel of the good book: "Her husband shall praise her in the gates." That is, before folks.

Bear all her burdens for her; even then she'll bear more than you do, in spite of you.

Love is a wife's only wages. Don't scrimp in your pay.—*Burlington Free Press*.

NEVER, except for the best of causes, to oppose my wife's will.

To discharge all services, for her sake, freely.

Never to scold.

Never to look cross at her.

Never to weary her with commands.

To promote her piety.

To bear her burdens.

To overlook her follies.

To love cherish and ever defend her.

To remember her always most affectionately in my prayers; thus God willing, we shall be blessed.—*Theodore Parker's Wedding-day Rules*.

It is the custom with certain critics to compare the modern woman unfavorably with her grand-mother, because the good old "foremothers" managed to get through so large an amount of work without servants or any labor saving conveniences. On this subject, the *New England Farmer* says: "It was those large families of children, those cold houses to live and work in, those damp cellars full of vegetables, which laid so many third and fourth wives in the old cemeteries, to say nothing of the short-lived first and second partners. When some grumbler tells us of the good old-fashioned families and the smart women of his father's or grandfather's time, we feel like telling him that the bondage of those days was something to shudder at, not to take pride in, and that the women of to-day may lay a good per cent. of the physical disabilities they have to those same smart foremothers. With due respect to his ancestors, if they could be materialized he would find them much less congenial companions than the bright women of to-day, who are planning, hoping and working to have their daughters better than themselves, physically as well as in every other way, and one move nearer the ideal woman."

TEMPERANCE.

Sacramento, Cal., has passed an ordinance making it unlawful for any person under 17 years of age to smoke cigarettes within the corporate limits.

Wine is almost universally used by the Japanese in celebrating the Mikado's birthday, Nov. 23, but the Japanese residents of Honolulu conducted their last festivities in honor of this occasion without the use of any stimulant.

"Let me be distinctly understood. Temperance is a means to a greater end. Temperance implies use and not abuse; it is a protest against abuse. Therefore there is but one mode, as the world is now constituted, of dealing with the abuse of alcoholic drinks, and that is by regulation. The method and the measure of that regulation will depend upon the temper of the time. If you women go on with your work for fifteen years more as you have for fifteen years past, the standard will be higher, the measure will be fuller, and the regulation will be more satisfactory. But I am compelled as a man, familiar with public affairs, having passed the greater part of my life either in legislative or administrative functions, to say that the law must deal with men and customs as they find them, and that the laws must be responsive to public opinion and not in defiance of it. Therefore when you come here as missionaries to raise the standard and form a higher opinion for the public, you confer a benefaction upon us, and for one I care not how high that standard is raised in the future, but it must be done by education, it must be done by argument, it must be done by persuasion, it must be done by conviction, which will be followed by legislation. Hence I have no difficulty in my public position in saying that the law as it stands, being the expression of the public opinion, of the people in this state shall be enforced. In a meeting I had the honor to attend night before last—a brewers' convention—I said to them: 'I stand before this people as the executor of the law, and I will enforce the law. If the law is oppressive or in advance of public opinion you must modify it, and in my opinion in some respects in this city it is in advance of the general judgment of the community, and it is always bad and dangerous to undertake to do more than you can accomplish with the backing of public opinion, and hence I have advocated and shall continue to advocate the modification of that law in some respects.'"

—*Mayor Hewitt, of New York, to Nat. W. C. T. U.*

It is a very common thing for prominent Senators who are liberally and hospitably inclined to give little luncheon parties nearly every day in their committee-rooms. At these lunches champagne is always served in every committee-room, unless there is always kept in stock a good supply of whisky. The private supply of liquor about the Senate is very great. One or two of the favorite subordinates in the Senate will keep

their places in that body until they die, because they maintain private bars for the concoction of desirable drinks. In the Senate restaurant there has not been for many years any pretense of hiding the sale of liquor. Whisky is not even served in a tea cup as it used to be some years ago. You can go into the Senate restaurant, or the House restaurant for that matter, and order what you please in the way of wine or stronger liquor, if you have the money to pay for it. The humbug and hypocrisy of the whole thing are shown by the fact that the very Senators who make the fiercest opposition to any modification of the restrictions upon the sale of liquor in the Capitol are the greatest patrons of the private supplies in the committee-rooms. The majority of Senators have too much leisure upon their hands. The Senate sessions in the main are very dull. Senators have a fashion of getting together in their committee rooms for social chats. The result is always more or less drinking. A great many more men are broken down by this convivial habit of steady tipping than by any so-called overwork. The Supreme Court, too, has its bar-room. This room is so hidden away from the public that very little is known of it, as only the Justices and their friends ever succeed in passing by the guards and reaching it. It is next to the dressing room of the Justices, where these ponderous gentlemen go for the purpose of putting on and taking off their rich robes of shining black silk. This room is a plain one, with an entrance from the clerks' office besides the one from the dressing room. It has a genial, open grate, over which hangs an old fashioned black iron tea-kettle, with a nozzle huge, black and thick. This is the kettle which has been used for heating the water employed in mixing hot punches since the days of John Marshall. There is a smart yellow man in attendance in this room who has a fine cabinet of assorted liquors, and who is an expert in making all kinds of fancy drinks. The furniture is of the plainest, the chairs and sofas being upholstered in black horse-hair. But the room is so retired and so well stocked with good things to drink that it is one of the most delightful snuggeries about the Capitol. Seated in front of this glowing fire, with long pipes or good cigars, the rotund Justices can watch the steaming tea-kettle as they sip their grog or fancy drink, forgetting for the time how far behind is the work of the Supreme Court. There is very little of the club sociability over at the House to what there is in the Senate. There is not such a large percentage of steady drinkers, while there is much less of the so-called sociability, and the majority of them do not care to go down to the restaurant. Few of them care for wine. The majority of the steady drinkers prefer to walk over to the Congressional Hotel, which is within a stone's throw of the House wing. They prefer this place on account of its freedom and its bar-room atmosphere, which is so necessary for the development of the kind of gossip and stories which the drinking men admire.

MISCELLANEOUS.

Josh Billings dryly remarks that "Ef a man hez a good wife he had better set perfectly still and bless hiz Maker every 20 minutes."

An advertiser in Texas calls for "an industrious man, as a boss over five thousand head of sheep that can speak Spanish fluently."

A man who was told by a clergyman to "remember Lot's wife," replied that he had trouble enough with his own, without remembering other men's wives.

"Young men believe in nothing, now-a-days," says Mrs. Ramsbotham, with a deep sigh. "Why, there's my nephew, Tom, who was brought up as a Christian, and now he's an acrostic."

A gentle Quaker had two horses, a very good one and a very poor one. When seen riding the latter it turned out that his better half had taken the good one. "What!" said a sneering bachelor, "how comes it that you let your wife ride the better horse?" The only reply was: "Friend, when thee be married thee'll know."

A farmer whose cribs were full of corn, was accused to pray that the wants of the needy might be supplied. But when any one in needy circumstances asked for a little of his corn, he said he had none to spare. One day, after hearing his father pray for the poor and the needy, his little son said to him: "Father, I wish I had your corn." "Why, my son, what could you do with it?" asked the father. The child replied, "I would answer your prayers."

The golden text for a certain Sunday school was, "And the child grew and waxed strong in spirit." Luke ii., 40. Little Ted's hand went up like a flash when the superintendent asked: "Can any of these bright, smiling little boys or girls repeat the golden text for to-day? Ah! how glad it makes my heart to see so many little hands go up! Teddy, my boy, you may repeat it, and speak good and loud that all may hear." And they all heard this: "And the child grew and waxed strong in spirit like 2:10."

A lady who is a firm believer in the cure of everything by the mind, or rather in the non-existence of all pains and maladies, has a little boy who complained of a terrible toothache. She took him to a scientist to be cured, and remarked to that lady as soon as she had entered the room: "My boy thinks he has a terrible toothache, Mrs. Scientist, and I have brought him to you to be cured of it." Having brought her attention to the case, Mrs. Scientist said: "Now, my little boy, you must look me right in the eye. [A pause.] Now you haven't any toothache." "Yes, I have, too!" shouted the boy. The Scientist smiled patiently, and tried it over again. "You must look me right in the eyes and try to forget your toothache," she said. Then there was another steadfast pause. "Ah, now, you haven't any toothache!" "Yes, I have, too!" screamed the boy again. The practitioner went through the process once more, with fresh persuasion. The boy seemed inclined to be silent this time. "Well, I guess you haven't any tooth-

ache now, my boy," she said. "You lie," said the boy, quietly. He was taken away, toothache and all.—*Boston Transcript.*

An amusing incident is told of a lady in Brooklyn. She is the proprietor of a boarding house and as her political preferences were for the Republican party, she determined to illuminate her large house on the night of the great Republican parade. Among her boarders were nine young men, who, being Democrats, thought it would be a good joke to make the house dark on this occasion. This they effectually succeeded in doing by putting water in the gas meter so that none of the jets could be lighted. There was no illumination, and the young Democrats were in high spirits at the breakfast table. After listening to their "chaffing" awhile to the landlady quietly remarked: "You have had your joke, now I will have mine. I want your rooms, and you will please vacate them immediately." Arguments and appeals were in vain; the blue jocular Democrats were turned out and thereby disfranchised by a change of residence. They spent election day lamenting the loss of an "inalienable right." It is possible that woman may may yet become a power in elections in ways little dreamed of, especially if they are denied legitimate means of expressing their opinion.

Mrs. Elizabeth Cady Stanton is reported as having related recently to a company of friends some of her methods of propagating her theories on the equality of woman. She said: "I have never failed to take advantage of any opportunity for propagandism in reference to the woman question. Whenever I am asked for my autograph I give it with some appropriate sentiment, and I suppose the United States is flooded with such productions. I preach in the pulpit whenever I am invited to do so, and do my best on such occasions to convince my hearers that the Bible teaches woman's rights. In my lecturing tours, as the oldest persons present I was often asked to say grace, and I finally composed one, which I have said thousands of times to the astonishment of persons present. It runs as follows: "Heavenly Father and Mother, make us thankful for all the blessings of this life, and make us ever mindful of the present hands that, oft in weariness, spread our tables and prepare our food. We ask this for humanity's sake. Amen." You see there are three gross heresies in this. First, I address a Heavenly Mother as well as a Father, then I imply that the tempting meal is due more to the wife's devotion than to the care of Providence, and lastly I put this all for humanity's sake instead of for Christ's sake. People used to be dreadfully scandalized by this grace of mine, but I know that it often sets them thinking. I used to be so annoyed to see a pithy man extend his arms in an unctuous way and thank the Lord for what his poor little nervous wife had nearly killed herself in preparing, that I took this means of doing justice to my fellow-woman."

FRANCHISE.

All the objections that were urged against the liberation of the negro are now seen to have been frivolous, hollow, absurd or wicked; so those now urged in opposition to the enfranchisement of women will, in the end, be regarded as equally ridiculous, empty and worthless.—*William Lloyd Garrison, in 1870.*

Mrs. Louis Seymour Houghton is engaged to write an article on Woman Suffrage for Appleton's Annual Encyclopedia. This will be the first time, we believe, that the movement has been thus recognized. Mrs. Houghton has lately moved from Amherst to New York City for the better prosecution of her literary work.

We need the participation of women in the ballot-box. It is idle to fear that she will meet with disrespect or insult at the polls. Let her walk up firmly and modestly to deposit her vote, and if anyone venture to molest her the crowd will swallow him up as the whale swallowed Jonah.—*Henry Ward Beecher.*

Is not the right to life, liberty and the pursuit of happiness as much the birthright of women as of men? Has woman no sense of justice, no love of virtue, no faith in God or humanity, no love of country or liberty, no sense of duty as a citizen, no love of home, which, if allowed to crystallize into law, would tend to protect herself and others?—*Mrs. Zerelda G. Wallace.*

A correspondent of the *St. Paul Globe* has been interviewing some of the women of that city to find their opinions on the subject of voting. The St. Anthony Hill dames stand about equally decided for and against as reported, while the women employed in shops and manufacturing establishments are almost unanimous in having a political preference and desiring to have it counted.

"A woman is always more grateful," continued General LaFevre, "than a man. You may talk all you want to about woman's hate and a woman's spite and her gossip, and all that sort of thing, but if you ever do a kindness to a woman she will never forget it, and will never miss an opportunity to show her gratitude. A woman is the best friend a man can have. I never laid any claims to being a favorite among the fair sex, but I have had more encouragement in my campaigns from women and have had more help from them in not only securing election, but in the fulfillment of my duties, than from all other negative influences. Of course, a woman has no positive influence when it comes to voting."

"God and the Women in American Public Affairs" was the suggestive heading of a sermon preached last Sunday in Tremont Temple by Rev. Emory J. Haynes. He said: "It was the influence of the woman in the home, by the breakfast table, over the father and brother, that was the one factor in the last municipal election which did more than any other to win the victory. We have our publicists and politicians,

but it is to the women we must look for the future of the country. That is what did it—the influence of home. These same home influences are going to continue at all the municipal elections. That is the great power of women. Women, I believe in you! The records show that the criminals are five men to one woman. To be pure and self-sacrificing comes to women more naturally than to men. We believe in you because you have led men in the Christian church. I hope you will help us to right a thousand wrongs."

The Boston City Council has been considering whether or not to provide separate polling places for women to vote for school committee. They have decided that it is not necessary. The board of aldermen are directed by statute to select the most public, orderly and convenient portions of the districts for a polling-place, and cause it to be properly fitted up and prepared. Women voted at all the ordinary polling places at the recent election without meeting with any disrespect, and the civilizing influence of their presence was very apparent. One of the good things that George William Curtis predicted many years ago as likely to result from woman suffrage, was that the polls would become pleasanter places for respectable men. "No decent man," said Mr. Curtis, "wishes to cast his vote in a bar-room, or to have his head broken while doing it." Now that women vote, the aldermen will be less likely than before to select a saloon as "the most orderly and convenient portion of the district for a polling-place."

The reasons for female suffrage lie in the reason and not in the sentiment. All the questions which belong to property—and property is the result of labor and life—can as well be decided by women as by men. If you build for yourself a place in the country, and leave most of the time and have your wife regulate it, she is just as amenable and as intelligent to the general operations of the surrounding society as a man. She pays the wages, hires the labor, executes many of the projects, and consequently she is a citizen. Whatever fuss she may make as a rhetorician about being denied the suffrage is on the Jeffersonian line of agitation. Woman is attaining her power in this country not through any of the excitable characters who have made speeches on this or that, but through the good sense of men who perceive that their daughters and wives are thoroughly capable of administering their estates. Therefore I believe that in a very easy and, as well, a conservative way, the females of the United States are to be added to the suffrage. It will not happen at once. Women should have a respectable interval to consider the great power which is before them. Any respectable woman will hear this statement without resentment. We admitted the colored people to the suffrage soon after the civil war as the best choice of evils, and some of us regret that act, while others think that we only anticipated history and took the bull by the horns.

MARCH, 1889.

NEW YORK, January 25, 1889.

MR. EDITOR:—I am a close reader of your valuable publication, the *Locomotive Firemen's Magazine*, and I have been specially interested in the Mechanical Department. The reason my attention is more particularly called to that department, is, I suppose because, not being a mechanic, I must be content with such investigations of mechanics as the limited time at my disposal permits.

I am fond of definitions, I like an "unabridged" dictionary. A locomotive fireman is not necessarily a mechanic, the same is true of an engineer, in fact, very few firemen or engineers are mechanics. Indeed, I have known "Master Mechanics" who were not mechanics in any proper sense of the term.

I have before me as I write, Webster's "Unabridged," and with your permission I will quote from its pages. Definitions, if standard, are always helpful. We ought to understand words, because they are the "signs of ideas." Now for definitions: "Mechanic," says Webster, is "one who works with machines or instruments." That would seemingly include firemen and engineers, because they work with machines; but the definition proceeds and we get a clear idea of the word "mechanic;" "a workman or laborer other than agricultural." That would seem to mystify rather than elucidate, since it is well known, that all workmen who are not agriculturists, are not mechanics. But Mr. Webster proceeds; he says a mechanic is "an artisan; an artificer; more specifically, one who practices any mechanical art—one skilled or employed in shaping or uniting materials, as wood, metal, etc., into any kind of structure, machine or other object, requiring the use of tools or instruments."

Mr. Webster specially excepts from the list of mechanics, men engaged in agriculture, but it is well known, that farmers operate machines, reapers, mowers, etc., and this exception applies all along the line, and simply means that men may and do operate machines who are not strictly, nor in any proper sense, mechanics; they are not artisans or artificers, do not practice any mechanical art, and to this class belongs the great majority of locomotive firemen and engineers. They do not make the machines; they operate, have not learned the trade, could not build a locomotive to save their lives, but in this connection, it is worthy of being said, they can operate a locomotive far better than the men engaged in building it.

Just here I wish to remark, that men who are not mechanics may, by study, understand the science of mechanics to a greater or less extent, while it is permitted to only a comparatively

few, to comprehend the science in its height and depth and wondrous sweep. This will be seen at once by Webster's definition of "mechanics," which he says, is "that science, or branch of applied mathematics, which treats of the action of forces on bodies." Manifestly, the average locomotive fireman and engineer, engaged in their daily work, cannot find time for an exhaustive study of mechanics; what then? They can find time to scientifically study the machine they are called upon to operate, to master all its parts and intricacies, and tell the whys and wherefores of each. This, I assume, to be the first and most important duty of firemen and engineers, and I apprehend, speaking from experience, that the more they study the more interested they will become in their researches after knowledge which they will find of service to them in their daily work.

I have used the expression, "the average locomotive fireman and engineer"—by which I mean that large body of faithful, conservative men, who are reliable on all occasions, where fidelity to obligation is unquestioned, and who are steadily advancing in their profession. It is a misfortune to range below the *average* as it is commendable to rise above it, and making due allowance for difference in natural abilities, it will be found that only those rise to commanding positions, who are studious. A fireman's apprenticeship, ought not to extend over five years, and if he sets a right value upon his time and opportunities, he will as a general proposition, find himself promoted by the end of the period named. I would advise him, and here again, I speak from experience, to take some of his monthly earnings for the purchase of books that will help him in mastering all questions likely to arise in perfecting himself for the position of engineer, and for still higher pay and usefulness. Such books are cheap, and when leisure hours come, as come they will, a good book, and I refer to books that will help him to master his profession, his chosen calling, will be found a friend indeed, and a valuable companion.

Hitherto I have been a silent and a gratified reader of the *Magazine*. What will be the fate of this communication I have no means of knowing, but it is prompted by good intentions—and in closing, I desire to say, that the science of mechanics is so far advanced, that it is possible to settle satisfactorily many questions that daily arise relating to the locomotive, the whys and the wherefores of certain things. Many of them have been settled by your correspondents, and once settled, they ought to rest. Then the demand is for something new. The mind wearies of the old—it demands fresh, live topics, the discussion of which demand investigation and the study of which, discovers unsolved problems.

One more remark, Mr. Editor, and I am done. While firemen and engineers, are not artisans, at least the great majority are not, we may all become more or less proficient in our elementary studies of mechanics, and may know a locomotive as intimately as if we had made it.

A Promoted Fireman.

MICHIGAN CITY, IND., February 15, 1889.

MR. EDITOR:—In the beautiful Greenwood Cemetery of Michigan City, Ind., there is a new made grave, where a few days ago was laid to rest all that is mortal of one who was loved and respected by all who knew him. Charles Mekow, one of the bravest, kindest, and most respected members of Harbor City Lodge of Locomotive Firemen, who was killed at Chicago on the night of January 21, 1889. Bro. Mekow was born in Michigan City, and was 26 years old last October. He was educated in the schools of this city, was a quiet and unassuming young man, and had no bad habits. He was the oldest son of Mr. and Mrs. John Mekow, and leaves a brother and two sisters, to whom the news of his untimely death came like a thunder bolt. He was a consistent member of St. Johns Lutheran church, and was also a member of the Royal Arcanum. He had been in the employ of the Michigan Central road since the 4th of October, 1884, and was spoken of by the railroad officials as one of their most faithful employees.

At the time of the accident that caused his death he was firing a passenger engine, of which James Heallion was engineer. The story of his death is as follows: The train he was firing stopped at 22d street, where he discovered that the stove, coupling the heating bar was nearly off; he took it off and took it into the cab. While stopping at the foot of Lake street his engine was uncoupled from the train and was moved up about three feet. He then proceeded to repair the coupling which it was unnecessary to do at the time. He was standing on the ground between the tender and baggage car working at it, when the engineer, James Heallion, came up to him saying, "Charles, you ought not to be in there, the other engine might back up and crush you." The words were hardly uttered when the other engine struck the train. Heallion cried "look out," but it was too late. In rising up he was caught between the bumpers and crushed in a terrible manner. The engineer picked him up and carried him to the depot, but before reaching the depot he had breathed his last. His injuries were internal and not a mark was visible on the outside of his body. His remains were brought to this city on the 23d, and were taken to the residence of Mr. L. J. Weiler, where they lay in state until the following day, (Thursday), until 2 o'clock in the afternoon, when they were taken to St. John's church where the funeral services were held under the auspices of the Royal Arcanum, who with the Brotherhood of Firemen, attended in a body. The funeral services were conducted by Rev. J. G. Hoch, who preached in German, and Rev. C. H. Rogers in English. Over two thousand people viewed the remains while in the church. The following members of the Brotherhood from Chicago attended the funeral: A. P. Booth, J. Naughton, Geo. Porter, L. R. Wright, J. J. McCarty, M. Craghton, O. L. Liendrew and B. Busch. The pall-bearers were as follows: Clarence Crosby, James Whitby, Wm. Henry, Chas.

Sadenwater, Albert Schroeder and James Fogarty. One by one, day after day, they are falling. Death reaches out his hand, and gathers in the noble, the brave, and the faithful. One more vacant chair, one more home in which there is mourning for a son and brother whom we shall see no more on earth. One more picture hangs upon the wall, the sight of which brings tears to the eyes of the loved ones left behind. Another place left vacant in the lodge room, to be filled by some one who may perhaps meet with a like dreadful fate. But let us hope that when we have finished our last earthly trip, when we have faithfully performed our last duties in this life, we may reach that station from whence we shall go no more, and where we shall meet our departed brother in that land where sorrow and death are unknown. *A Brother.*

GALVESTON, TEXAS, February 2, 1889.

Editor Firemen's Magazine:

Gulf City Lodge, No. 115, has just had the pleasure of welcoming a Lodge of the Switchmen's Mutual Aid Association to our city. The switchmen and firemen are the only railroad labor organizations in this city. We extend to these brave men a hearty welcome, and are glad to see them lighting their Lodge fires here in the South, and with such material as Geo. Oliver, Thos. McClain, Louis Bonaty, our, "Little Shorty," and Joral Stock, they cannot help prospering.

Our old, gray-headed Democrat, James Henderson, had the nuptial knot tied to-day, and the boys congratulate him and his lovely bride. The boys also congratulate Bro. James O'Neal, he having a young "tallow pot," at his house, says he "is a man." Mike Hussey, one of our popular passenger engineers, has just returned from New Orleans with a beautiful young bride, and is receiving the congratulations of a host of friends, and hearty wishes for health and prosperity.

It is difficult to imagine what John Pealme is thinking about. Here he is left out in the cold and leap year gone glimmering. The White Caps disbanded in short order in this city. Our Master Mechanic's fifteen-day law killed them.

The Brotherhood firemen down here are well-pleased with the new law system of the Beneficiary department, and on the 1st day of February they were all on hand to square up accounts, but were much disappointed upon learning that the Richmond Convention of the B. of L. E., did not repeal those obnoxious laws which keep members of the B. of L. F. from entering the magic circle of the eagle-eyed engineers. But we have one consolation, and that is, if all the members of the B. of L. E. were men of broad caliber, like we have here in Texas, that law would have never appeared on the statute books of the B. of L. E.

I am not throwing hints, but I want to say that it would be a great help to all Magazine Agents if each member would start out and obtain at least one subscriber to our *Magazine*. *B. B.*

MY PICK AND SCOOP.

Astronomers love their telescopes because they help their eyes
To find planets, comets, suns and stars far in
cerulean skies,
But I love my pick and scoop, because no other
tool I ween,
Could help a Fireman half so well to fire his old
machine.

Keep her hot,
Make her trot,
Give her steam,
Make her scream.

Till her wild notes float to hills remote,
And come echoing back with a whirl and a
whoop,
In honor of my pick and scoop.

The sailor loves to grasp the helm, when old
Boreas blows a gale,
The whalmen grasp their good harpoons when
the "Lookout" cries "a whale!"
And the fireman grasps his pick and scoop when
94 is slow,
And the engineer, in quiet tones, says, "Billy,
make her go!"

Scoop and pick,
Double quick,
Open door,
Give her more;

Now she dances along to a merry song,
As she gracefully swerves around the curves,
"Pick and scoop's trumps," Bob observes.

O my pick and scoop are dandy tools, and I love
to sing their praise;
Without them I ne'er could make the greedy
fire box blaze.
I think of throttle, brake and punch, all useful
things, and yet,
But for my pick and scoop they'd be all useless
things—you bet.

No humping,
No thumping,
No jumping,
No pumping.

Standing still on the rail, as dead as a nail,
Old 94 would move never more,
Till with my pick and my scoop, I made the fire
box roar.

Billy—94.

DE SOTO, MO., January 27, 1889.

Editor Firemen's Magazine:

In the present number of the *Magazine* an article appears referring to the agreement entered into between the officers of the Mo. P. R. R., the St. L., I. M. & S. R. R. and the firemen on the above railway systems. At the time that the Joint Board of Adjustment of the B. of L. F. on the Gould system convened at St. Louis for the purpose of making an agreement fixing the schedule of wages, etc. with the Mo. P. R. R. and its leased and operated lines. The M., K. & T. R. R. and the I. & G. N. R. R. were a part of the above system of railways, the firemen on said railways were represented on the board by Bros. Carter, of Taylor, Tex., Horner, of Denison, Tex., and Maer of Parsons, Kan. And to their credit be it said, that to them as much as to any members of the board, is due the credit for obtaining the agreement referred to with the Pacific Railway Co. I make this correction because I know with what diligence and zeal the above mentioned brothers labored, though they are not enjoying the benefits derived from the agreement with the Missouri Pacific Railway. I hope they will ere many days be rewarded by making a

similar agreement with their respective railroad companies. It was not Bros. Dillon and O'Connor that held conferences as stated in the *Magazine* with the representatives of the company, but Bros. Rabbitt, of De Soto, Mo.; Dillon, of Downs, Kan., and Maer, of Parsons, Kan., were elected by the board to confer with the company. That they have done their duty to those whose interest they represented goes without saying. It is not my intention to take from Bros. Dillon or O'Connor any just credit they may be entitled to; but to my colleague on that committee, appointed by the board, who labored so earnestly in the interest of the firemen without even the reward of sharing in any of the advantages acquired by the agreement, is due the everlasting gratitude of the firemen on the Missouri Pacific Railway. I refer to Bro. C. W. Maier, of Parsons, Kan.

Yours fraternally,

Michael Rabbitt.

[We cheerfully give space to the correction. Bro. Chas. W. Maier, of Parsons, has earned the title of "good soldier" in our cause, and far be it from our purpose to dim the lustre of his well-earned fame.—ED. *MAGAZINE*.]

ROCHESTER, N. Y., January 30, 1889.

Editor Firemen's Magazine:

I have been taking the *Magazine* for some time, and have looked repeatedly for a line or two from some of the brothers of Rochester Lodge, No. 99; but have failed to find them represented in your list of correspondents. What is the reason of this? They are a bright lot of fellows and it seems as though they ought to have something to say for themselves. Please stir them up through the columns of the *Magazine*, and see if we can not find out what they are made of. Our Master, Secretary, Receiver, etc., are stirring, go-ahead fellows. We have a fine lodge room, and a good attendance at all our meetings; and I for one, would like to have some of the B. of L. F. boys in other parts of the country know it. I would like to tell them that we have over one hundred members in "99" and a fine lot of fellows they are too. Stir 'em up and see if we can hear them murmur. Very truly yours,

One of Them.

EAST SAGINAW, MICH., February 3, 1889.

Editor Firemen's Magazine:

Bro. Myron Mitchell, of Saginaw Valley Lodge, No. 286, saved the life of Oscar Jackson's four-year old son. The little fellow slipped and fell into a cistern and Bro. Mitchell jumped in and brought the boy to the surface, more dead than alive. Bro. Mitchell blushes when we mention it to him, but it was an act that will be ever remembered. Bro. James Wortsmit's barber charged him twenty-five cents for a shave the other day, but it is a big improvement on the face. If some of the brothers on the B. C. division don't let the girls alone and stop flirting with someone else's girl they will find their names in the *Magazine*.

"286."

HARRISBURG, PENN., January 30, 1889.

To the Editor of the Magazine:

Having read several of the writings in reference to federation and the B. of L. E., published in the *Magazine*, I concluded to write a reply and express my feelings, which, I will venture to say, will be heartily endorsed by all the brothers in the east, especially those employed on the Pennsylvania system of railroads.

The action of the B. of L. E., to many, will be rather unexpected, but to many of us who can recall their former acts, prior to the Convention at San Francisco, in 1884, and are able to follow their proceedings since then, I will say it is just what we expected from the "grand," so-called, "Noble Pioneer Order."

To my knowledge they have always done the same thing. What did they do for the firemen in 1872? They formed a classification to benefit themselves, which is still in force. What did they do for them in 1877? And now the question again arises, what did they do for us in 1888? How long is the B. of L. F. going to submit to such treatment without making some effort to stop it? I will say for the brothers in the East, no longer! Let the B. of L. E. understand that the B. of L. F. is built of solid material; it has no stains on its character; it has never tried to build up its merits at the expense of others, and if they think they can tread on the toes of the B. of L. F. let them try it and we will show them what the result will be.

The *Magazine* says the B. of L. E. does not intend to repeal its obnoxious laws. If any of the brothers had any idea of feeling such a repeal it is more than I looked for. They have never made the first intimation of having a repeal made, especially in the East. They say it is the cause of their western Divisions having the majority of votes at Convention. If such is the case, how did they manage to have a repeal made in reference to its members and the Pennsylvania Relief Department? And why did they do that? Simply to fill up a breach made between themselves and the Pennsylvania company, and to gain their lost members, but a man who will attach his name to an Order that will be guilty of accusing him of violation of obligation, and then try to get him to reconsider the case, is unworthy the name of brother in any Order. I hope there is not one name connected with our Order that will tolerate a thing of that kind. Yet they will hold on to the clause added at New Orleans, and widen the breach between the two strongest organizations in existence, by putting an additional clause ignoring the proposition made by the B. of L. F., at their Richmond Convention, and yet, they have the audacity to ask, "why don't you join the B. of L. E.? What good are you in the B. of L. F.?" Why, you are neither an engineer nor firemen. The only way to become an engineer is to join the Order." As though it was the only way to obtain the knowledge of running an engine.

The correspondent from Kansas City, Mo., says he has read the *Magazine* for some time and has

often noticed the criticisms cast upon the O. R. C., and awaits to see if the *Magazine* will exercise its courage of conviction in dealing with the B. of L. E. I will attempt to answer that question for the brothers in the East; there will be no lack of courage to measure out the just dues to the B. of L. E., but we will leave the Editor to make his own reply.

Our Editor says when the committee of Firemen went to Richmond, they went with bright hopes in view, expecting to see the laws of the B. of L. E. repealed, and the B. of L. F. received upon its merits, if nothing more. But their expectation ended in a sad disappointment. It was what most of us in the East expected to see, because we were more conversant with their talk, actions and propositions in reference to the formation of a Federation Board. If it were possible for them to domineer over all concerned, they might have thought differently, because their idea is, "we are the great I am Order and you must submit to us or we will not join hands and if you can accomplish anything without us, go ahead, and we will come in for a share of the spoils."

They are ever ready to cast reproach upon the O. R. C. for the assistance rendered the C., B. & Q., by allowing its members to take the situations vacated by the strikers, yet they ignore, cast aside, even disown an organization which stuck to them through thick and thin, without the least sign of flinching and no complaint, and yet, they (the B. of L. E.) were the first to weaken and say appoint a committee to bring about a settlement. And how was it done? Was there anything gained? Was there anything lost? Yes; honorable members of the B. of L. F. sacrificed their employment to make the grievance of the engineers their grievance, and stood by them loyally to the bitter end, expecting to be treated as men, and what did they get? Their fraternal hand of friendship was ignored. I hope it will be the last time they will have the opportunity of giving us the cold shoulder of contempt. Let us stand on our dignity and show the B. of L. E. that we have lived so long without them and can live forever without them. We have no flies on our back, neither have we men roaming the country out of employment *ignored by us*, after showing their loyalty and proving themselves honorable men and worthy of recognition. No doubt we shall hear from some more of our brothers, because many of them can recall the actions of the B. of L. E. I hope they will take the courage to write them.

Harrisburg.

VANCEBORO, MAINE, January 31, 1889.

MR. EDITOR:—Much has happened since last I wrote you. Our trial has come. We have seen and conquered it. Our first annual ball occurred January 1, at the Vanceboro rink under the charge of the officers and members of the Lodge. The hall was elegantly decorated with headlights, banners, scoops and crossed picks and large circles of red, white, green and blue signal lanterns,

also with a large collection of pictures of locomotives, etc., loaned by Mechanical Superintendent G. A. Haggerty, of the New Brunswick railway. Music by Abbott & Jones' orchestra, of Bangor, and a seven hundred dollar piano, kindly furnished by the boys of the Maine Central railway. The ball was gotten up to aid the sick benefit fund of the Lodge and was a success, about one hundred couples joining in the grand march. Mechanical Superintendent Haggerty, from McAdam, was present and took an active part. Bro. J. E. Shea, our Master, was floor manager, aided by Bros. Robinson, and Matthews and Bros. Boone and Cleary, of No. 4. Bros. W. E. Dresser, W. H. Parker, Whit Noble and W. A. Smith took charge of the tickets and financial department and were a strong team, selling in all about one hundred and twenty-five tickets. A splendid turkey supper was served at 11 o'clock by the ladies of the Union Sewing Society, assisted by Mr. R. E. Law, of the B. of L. E. Dancing was kept up until 2 A. M., when the night trains took the parties to their homes all well pleased and happy. The affair netted a snug little sum for the good of the Order, and completely routed the prediction of our enemies that it would be a failure. The best of order was maintained and every guest was loud in praise of the good music, good dancing, good order, good supper and good time generally. The ladies all took a hand decorating the hall, and large parties were present from St. John, and Woodstock, N. B., and from Bangor, Houlton and Mattawamkeag, Maine. The officials of the Maine Central and New Brunswick railways aided materially by allowing the boys every facility for getting here, possible under the circumstances, as both roads changed time on that day. To Mr. E. A. Hall, Train Dispatcher of the Maine Central, and to Mr. G. A. Haggerty, of the New Brunswick railway, is due the sincere thanks of all for favors extended, and to the ladies of the Society, for the splendid supper and services.

Mr. Hall and Mr. Haggerty have at all times shown themselves our friends and have always aided us. The Brotherhood has in them two powerful allies in the adjustment of all troubles or grievances. It is hoped that this good feeling may widen and broaden until every official will feel as they do, that the Brotherhood of Locomotive Firemen is to be trusted and from its ranks come only sober and industrious, men to whose intelligence may be trusted the highest responsibilities.

Of our affairs in this far down east section there is little of interest to be said. Our disabled brother, H. D. Clark, is confined to the house, but bears his suffering like a man. His claim has been allowed by the Grand Lodge. Our membership has decreased a little, but our little band of "tried and true" are loyal and earnest and mean to keep the good ship afloat and our banner pure and high. General Manager Cram, of the New Brunswick, in order to meet the usual financial necessity, asked the boys to accept a cut-down of ten (10) per cent., but they failed to

see how they could live on less than one hundred and fifty cents for the same day's work, that all other roads pay more for doing, and as a result the necessity is being met by reducing trains and setting the men back to cleaning and even to doing nothing until cash enough is saved by this policy to pay a dividend and insure the management praise for economy. Hence, times are hard and pennies few, but the spirit is willing and the fire of Brotherhood needs no blower.

The new laws meet with some distrust on account of not exactly being understood, but it is hoped that they will be a benefit to the Order.

On the Maine Central, business is unusually good and all the men are busy. An unusually mild winter has made snow-plow trains a precautionary measure so far, but snow is a sure crop in this climate and probably the plow crews will get exercise later on. The Canadian Pacific is laid to Mattawamkeag, but Jack Frost shut up the ballast pits and work has been abandoned until spring.

Our foreman, Mr. Robinson, is said to have been offered \$4,000 per year to go to Persia to take charge of a new railroad to be built there.

Wishing the cause the best of success and trusting the future may be brighter than the past, I am,

Truly yours,

O. K. D.

NEW YORK CITY, February 6, 1889.

Editor Firemen's Magazine:

If I have not worn out my welcome I will, with your consent, say a few more things, as I think, for the good of the Order. I want to say I am pleased with the stand the *Magazine* has taken in discussing the laws of the B. of L. E. I have been anxious, since my connection with the service, to be on the best of terms with the engineers. My signature, my *nom de plume*, is not intended to mislead any one as to the position I occupy. "Throttle" means throttle. It don't mean "scoop." Let it go for what it is worth. To thousands it means years of hard work, and from the first, a purpose to "get there, Ell," but in getting there, I did not forget, and I do not forget, and I am not going to forget, my old associates, the firemen, and I am not going to set down on the old Brotherhood—not much. I like my brethren of the pick and scoop. I like the old Lodge room, the old Lodge fires, the old council chamber, and for one I don't propose to desert. I don't propose to go back on the boys. I am going to stay with them; that's the way I feel now. I haven't anything to say against the engineers as men, but the laws they have passed which the *Magazine* has commented on, I think show an unfriendly spirit, and I am opposed to them. I want to tell you the way I look at the subject. The B. of L. E. is made up of men who have been firemen. The B. of L. E. didn't make them engineers, but the B. of L. F. did. Why should a man, as soon as he gets to be an engineer, turn around and kick the Brotherhood that helped him to advance in his chosen calling? Why should the B. of L. E. demand of a member of the B. of L. F. to do such a thing? I don't

want to say anything unfriendly about engineers, and I will not, and if I will not say anything unfriendly about the B. of L. E., I certainly will not do an act which the B. of L. F. would have a right to believe was unfriendly. "Acts speak louder than words." I will not turn apostate. I will not give a Brotherhood that took me in and treated me well, and helped me to advance, a slap in the face. I will not desert it to join the B. of L. E. In the first place I don't see any particular advantage in it, but if the advantages were a thousand times more than I can see, still, while the B. of L. E. keeps its present laws on its book, I would not abandon my present Brotherhood to join it. I can't speak for others, but I believe when members of the Brotherhood of Locomotive Firemen stop to consider what is right and manly, they will not abandon the Brotherhood to join the B. of L. E. If the B. of L. E. should conclude to repeal the laws which the B. of L. F. rightfully regards as obnoxious, the propriety of joining the Order might be considered, but as matters now stand such a step ought never to be taken, nor thought of. I have read the gush about the "twin Brotherhoods," and I have noticed the great efforts made by the B. of L. F., or by some members of the Order to win over Grand Chief Arthur. The thing has utterly failed. You can't catch him with silver plates and pretty speeches. As matters stand the talk about "twin Brotherhoods" isn't good taffy, and it ought to stop. Let the B. of L. F. take care of itself. It can do it. It has done it in the past. If the B. of L. E. thinks it holds a lone hand, joker, bowers and ace, it has a right to go it alone. I shall not object. But if it wants the B. of L. F. for a "pard," it must not roost too high. In a word, the B. of L. F. is good enough for me.

I like what the *Magazine* says on the subject of federation, and I happen to know that a great many engineers like it as much as I do. We are going to have federation with the brakemen and the switchmen. That will make a strong team, and there are thousands of engineers and conductors who will come in under the banner of federation or make it warm for somebody. The way I look at it, federation must come, because there is a necessity for it. I read every railroad paper I can get hold of, and I have not seen one that opposes federation. I believe federation would put an end to strikes, which would be as good a thing for the roads as it is for the workers, and as it is a common sense movement I believe it will be perfected. I don't want to take up too much space, but I want the boys of the B. of L. F. to stand by their flag, and I want to see federation succeed. With this I will quit for this time.

Yours fraternally,

Throttle.

MARQUETTE, MICH., February 9, 1889.

MR. EDITOR:—I am not much of a literary man, only a common fireman, but full of energy and ambition, so I will try my level best to give a little news from S. M. Stevens Lodge, No. 150.

Having a few leisure moments, I thought I could do nothing that would be more interesting than to write to the *Magazine*. The boys are getting so industrious that they never seem to have time to say a word for themselves.

Bro. Reinhardt is stoking for "Fatty" Green this winter. He says that "he shovels more snow than coal." Charles looks rather small along side of "Fatty." Bro. Bishop is throwing diamonds for "Little Britches," and his hair looks quite curly when he gets in Thomaston after a snow storm. Bro. Turner (better known as "Reddy,") is firing for big "Hank," on engine 102. He says "he will be glad when winter is over." Bro. Harrington, known as "Black Conny," or the "Kaahooter" of Aromatic, is firing for "Wooley Mac," and thinks he is a dandy, because he is married, but Brown says, "hold on till spring, and I will show you a copious looking woman." Come on Bro. Brown, we all feel like having a good smoke. We mourn the loss of Bro. L. L. Hood's smiles. He has gone to the west end to pull a passenger. Good luck to you, L. L. Bro. Patenande is recruiting on the log train. Look out Pete, 91 reverses hard. Little Dick opens and shuts the fire door for him, while Brigham and Rose are recuperating for a few days. Rose says that "twenty-four hours a day is a little too much for him." Bro. Zryd is pulling Engine 28's throttle this winter. He says that "his left arm is quite sore," but stick to it, Charles, you will conquer if you win. Bro. Zimmerman is more than slashing the diamonds to Engine 72, this winter. He says that "they pull more cars than any engine on the road." Bro. Kelly is as broad as he is long. He is cleaning one of the freight engines this winter and throws coal whenever it is necessary. Buck is a hard fellow on engines, and has a new one every other day. Bro. Stack, (known as Vearskens), is the night hawk this winter. He gets up at twelve o'clock every night.

I would like to say something about the Macinaw Division, but as I am not posted down there, I will let them work for themselves.

We have had some new appointments on the South Shore of late. We have Mr. Wm. Fitch for General Manager. He has a striking appearance which everybody seems to like. Mr. Connelly has been appointed Superintendent of Motive Power and Machinery. He is a highly respected gentleman wherever he has been. Mr. Charles Rosseter is General Foreman, and Mr. Michael Meehan is Traveling Engineer.

Our traveling engineer had a little misfortune. The other day while out maneuvering one of the new snow-ploughs, the scraper lever was caught, and while trying to loosen it, it flew up, striking him in the mouth, knocking a couple of teeth out and cutting his lip badly. We all hope he will soon be all right again.

We had pleasure of a visit from Bro. Archardt. He is firing on the Nickle Plate. You are welcome James—call again. I will close by wishing health and wealth to all the brothers, and prosperity to the B. of L. F.

A Fireman.

COGITATIONS AND INTERROGATIONS.

BY SWITCH.

MR. EDITOR:—Beg pardon, but here I am again
With another batch of questions, and 'tis
plainly to be seen,
That I find it very difficult, when at leisure to refrain,

From hurling them at the editor of the *Firemen's Magazine*.

What do you think will be,

The fate of the O. R. C.—

The nickle punch brigade, with the spotters at their heels?

Will it cut bait and fish

As the corporatious wish,

Without caring a continental who shuffles the cards and deals?

The fate of the O. R. C., we think, is settled beyond a peradventure. Already split it will continue to disintegrate, crumble until it will be like the little end of nothing whittled to a point.—ED. MAGAZINE.

MR. EDITOR:—In the cab my cogitations are often
a little queer,

And I give my fancy freedom, as I fly along the rail.

And as I contemplate my boss, the locomotive engineer,

I wonder if the B. of L. F. is the B. of L. E.'s tail.

Does the B. of L. E.'s law,

Make the B. of L. F. its paw.

To rake the B. of L. E.'s chestnuts from out the furnace fires?

If my cogitation's true,

As that the skies are blue,

Please tell me what's the difference, when the B. of L. F. expires?

We are in full sympathy with Brother "Switch." His cogitations are eminently practical. The "chestnut" business ought to cease. If there are those who believe that the B. of L. F. has hitherto been used as a "monkey" to pull anybody's chestnuts out of the fire, the time has come for the monkey to be a man—and the process of evolution can't be consummated too soon.—ED. MAGAZINE.

MR. EDITOR:—I am inspired by ambition, to better my condition,

And I have the courage of conviction, I profess to be a man,

And when a fireman by word or deed, degrades his position,

I'll bet my Jerusalem town-lot he isn't worth a d—n.

When a man won't hold up his head

He might just as well be dead

He'll prove a coward in the battle and the storm.

Do you think what I say is so?

Please Mr. Editor, say yes or no.

And if I am mistaken, bet your bottom dollar I'll acknowledge the corn.

The courage of conviction is the demand of the times and we are inclined to the opinion that the members of the B. of L. F. have it as much as falls to the lot of any set of men on the continent. That the time has fully come to put it into practice is manifest, and that it will be exercised on all proper occasions we are confident.—ED. MAGAZINE.

GALESBURG, ILL., January 25, 1889.

Editor Firemen's Magazine:

This being my first attempt to write for the *Magazine* I hope to be excused for any bad break, as I intend to hit some one a little bit hard, for I am one of the "Q." or Burlington victims. What I am about to say is, I think, the sentiments of the majority of the once "Q." firemen.

About one year ago, the "Q." men were treated as scabs are now, simply because we would not ask for the pay that other roads were getting in the west. We then went to work and fixed up and asked for a standard rate of pay, which you all know was refused—nothing was left to do then, but to strike, as we had tried every other reasonable means to settle it.

One other thing in regard to it, is that which you all know, that the B. of L. E. was the one that would be benefited the most, if we won the fight; still, at the same time, the B. of L. E. always has and is to-day treating their firemen with contempt and as men that are far beneath their notice. No wonder that the trainmen refused to come into the fight, because the engineers were in it; they were willing to help the firemen but not the engineers. It seems when an old time B. of L. E. man gets on his engine, and pulls out, he throws back his head with a big feeling as much as to say, "if I were to step off this engine, the world would stop and refuse to go, until I, or some other big man like myself, stepped up and moved her." All of this means that all the firemen know, is to shovel coal and keep the engine cleaned off, so that the right side man can keep himself clean, and if the fireman happens to have a hard steaming engine, and feels tired, he must still keep her hot and rush around and do all in his power to make a good run, and still receive the slang of the engineer. But when they get into any trouble, they come to the firemen and put them on the back and say "the twin brotherhoods are pretty hard to handle, and they are the men to stay together in trouble." But after they strike, and the Order gets tired of paying their money to support them they call in a few select old time engineers to make the settlement and refuse the firemen a hearing at all, and give them to understand, that they are the men and the firemen must take what they feel like giving them. You cannot think hard of the O. R. C., the B. R. B. and the S. M. A. A. for the way they act with the B. of L. E. for when everything is running smooth they treat every other labor organization with contempt or curse them for everything that is done.

I am still satisfied that labor will succeed in asserting its rights at some not far distant day, but it will be with an Order with more manliness and justice than the B. of L. E. has proved itself to possess. In the late "Q." strike we had, no doubt, a large majority of good engineers, but they had the big feeling of the men in the east to contend with, and as every one knows were beaten. Now, we are thrown out of employment and very little money to hunt work with. Hoping I will be excused for my radical expressions, as this is my first time, I am yours,

L. Watson.

BLACK DIAMONDS.

THE railroad frog should be fired, though it cannot be fried.

THE "open throttle" theory is what the crocodile believes in.

FOR a sleeper it is astonishing that a Pullman always arrives on time.

WE are not required to write puffs of old 298. She can puff herself.

WHEN a locomotive flies along the track it is owing to the *flues* in the boiler.

THE dispatcher says "all trains are now run by electricity—all are lightning trains."

A RAILROAD has too many ties binding it to earth, to ever expect a heavenward flight.

"WHEN federation comes we will all be well fed." You are right in that Billy. Come again.

IN spelling syndicate, the "y" should be dropped and an "i" substituted. It would be more sincere.

A FIREMAN says, "the saloon *scooped* in all his wages," and that he is "going to *pick* out another place for his quarters.

WHEN a railroad magnate makes tracks toward Canada, it is not to be taken as a sign that he is running away from creditors.

I find in "strict neutrality,"
Much that's like brutality;
And such mental obliquity,
Is half brother to iniquity.

DICK was observed keenly eyeing a bevy of pretty girls, being asked what his intentions were, replied, "I am going to take my 'pick'"

RECENTLY there were but two places in the United States where, during twenty-four hours, a drop of rain fell. But railroad stock was watered all the same.

"Mutual admiration," said Sam, "is well enough, but you can't operate a railroad with esteem, you've got to have the red-hot, scalding, expansive article.

"SAY, Bill, how are you on conundrums?" "Good." "Well, why is an engine like the Mississippi river?" "Give it up." "Because it has grate bars." "Keno."

"WHAT are you going to do with them paper bags?" queried Bob of his engineer. "I am going to wrap up some *dry steam* in them, to help in case of an up grade, when this old wheezer gets tired.

DICK says, "Miss Sal Oon, a bewitching creature, is constantly making love to the boys; that she induces them to drink her health many times a day, in consideration of which, being an artist, she paints their noses red, and gives their eyes a fiery appearance, which she declares 'is very pretty.' Occasionally, she selects some favorite, and draws dainty lines of black and blue under his eyes, which she says are emblems of sorrow

for lost drinks. When she has decorated her favorites in rags, and dirty linen, she laughs hysterically and goes for the fellow who has just drawn his pay and wears good store clothes. She's a dandy, and don't you forget it."

BILL NYE says "humor is a luxury and yet a necessity," and that "everybody is going to have it in some form or other." As Nye as we can guess, Bill is correct. Even undertakers and grave-diggers are humorous sometimes. There are humorous designs in gravestones and monuments, and epitaphs are often facetious. Humor often comes to the relief of railroads, as when the Master Mechanic throttles an engine, or a road rails against the construction crew. When a brakeman gets broke or a fireman is fired, the humor of the thing may be regarded as a luxury or a necessity as best suits the occasion, and when a conductor punches the passenger instead of the ticket it is immensely droll. We simply mention these things to show that Bill Nye is wise as well as witty, and that as a wag he may wagon.

KANSAS CITY, Mo., February 15, 1899.

Editor Firemen's Magazine:

I am not a member of the Brotherhood of Locomotive Firemen, and were it not for reading Brother Fackenthal's article in the February number of the *Firemen's Magazine*, should never have thought of writing anything for your book. But Brother Fackenthal has impressed my mind most seriously by giving expression to his "opinions." I don't allow any one to entertain a higher opinion of the B. of L. E. than I do. I profess to be a true Brotherhood man, but I haven't anything to do with making or unmaking our laws. I don't want to have it understood that I like every law that the engineers have passed, but like a great many others, I don't kick, because kicking most always makes things worse instead of better, but I have a good many times told my brother engineers that some of our laws were bad, and ought to be done away with. You see I came up from the ranks of Locomotive Firemen. I joined the B. of L. E. before the San Francisco convention was held. I think the law passed at that convention about members of the B. of L. F. who were then members of the B. of L. E. was unfortunate. I thought it would create bad feeling, and I wasn't disappointed. It did create unpleasantness. But I was glad to see that the members of the B. of L. F., notwithstanding that law, didn't get very mad about it. They hung on and did the best they could. They remained friendly—but they didn't feel very good about it. But when the B. of L. E. convention passed another law at New Orleans, I certainly thought the B. of L. F. would be pretty indignant about it. But the firemen still tried to be clever, but they felt bad, I know, because I heard them express their sentiments pretty freely, but they didn't jump the track, nor burn their boilers, nor break things. They

held on, and when the C., B. & Q. strike came they showed the engineers that every law they had made unfriendly to the B. of L. F. ought to be repealed. I know just what I am talking about. That strike on the C., B. & Q. was no small affair. It was a cyclone, a tornado, and an earthquake all in one. A coward couldn't have stood it a week. Then the engineers wanted friends, and don't you forget it. They never wanted friends so much in their lives. I know. I was there. I saw with my own eyes. I heard with my own ears. I don't make any mistake in what I say. In that strike the firemen were the friends of the engineers—friends when they didn't have hardly anything to gain and pretty much everything to lose. But they didn't flinch a bit. They stood right up to the rack, and they did it to the last. For this courage and friendship they were told that the laws passed at San Francisco and at New Orleans would be repealed at Richmond. But it wasn't done, and I am satisfied it was a great mistake. It has made a world of bad feeling. It is no use to talk. I am telling the God's truth. It was a great blunder to let those laws stand. While they stand it is foolishness to talk about harmony. There can't be any harmony that don't have mixed in it distrust, and that is not harmony at all. A brother engineer said to me, "Tom, the *Firemen's Magazine* is kicking powerfully in the January and February numbers against the B. of L. E." I said, "Yes, and its just what I expected. We didn't do the right thing at Richmond in not repealing those laws, and we didn't do the right thing in appointing that committee to settle our strike on the C., B. & Q. We didn't treat the firemen right, and somebody's to blame for it." He said, "You're right, Tom." I asked him if he had read Brother Fackenthal's opinions. He said, "Yes, and his piece is bound to have a bad influence on our order. We've been doing wrong. I don't believe another engineer, a member of the B. of L. F., will ever join us. We have piled it on too thick, and we've been rubbing it in with both hands."

Now, Mr. Editor, I want to say there are a great many members of the B. of L. E., who are the friends of the B. of L. F. I want the two brotherhoods to come together in the bonds of peace, and harmony. I want them to federate. If we can keep things from getting very bad, I think at the next convention the laws about which you complain, will be done away with. That sort of feeling I know is spreading. Because I love my Brotherhood I write this, but I don't think the right way to bring about right is to try to hide a wrong. No good ever comes of that way of doing business. I endorse Bro. Frackenthal's way of stating things. The way to do right is to talk right and act right.

C. B. & Q. Engineer.

RICHMOND, VA., January 28, 1889.

MR. EDITOR:—Some times ago an article appeared in the *Locomotive Firemen's Magazine* on the hiring of engineers, all of which I

would cordially endorse, but it went on to say that once an engineer always an engineer could only become a reality, if firemen would preserve patience and wait, not for a prescribed period, but an indefinite one to arrive at promotion. Now, the *Magazine* says firemen are apprentices to the engineers. In all shops, of whatever craft throughout the States, we find large numbers of apprentices, all of whom in the short term of four or five years go out as journeymen, this would be short time for most of us, yet it is strange, the country is not run over with tradesmen. It is true there are more apprentices required to locomotive engineering than any other business, but still, with the large number of engines turned out annually from the different builders, they must need men to operate them even allowing some to take the place of others worn out.

I think the time has come for firemen to stick together. They have no affiliation with the engineers except in name, still, in the eye of the country, the B. of L. F. is the compeer of the B. of L. E. Hardly another set of apprentices could be found to act as those of the C., B. & Q., yet our able and worthy representatives at the convention of engineers, are set aside and their advice cast to the winds. Our Vice Grand Master Hanahan, while here some time ago showed the affection of the B. of L. E. for us so forcibly as not to be soon effaced. I see no tie that binds us to them but that of manhood. I believe in two classes of wages. For an engineer of twelve months' experience is a surer guarantee to his company than one of twelve days. The latter may be as competent on his first trip as the former, but the company incurs that risk. It is also a help to us, and we should stand by it. With best wishes for the prosperity of our noble Brotherhood. I am your fraternally,

W. A. Gore.

FREEMONT, ILL., January 26, 1889.

Editor *Firemen's Magazine*.

Again death has entered the ranks of Union Lodge, No. 138, and robbed us of our Master and Collector, Brothers James A. Flack, and Wm. Brubaker, who met a terrible fate on the night of the 16th of January, in a wreck at Sylvania, a station on the C., M. & St. P. railroad. Again we are reminded of the uncertainty of life and the importance of living so when we fall in the battle of life, we may be admitted to the Grand Lodge above. By the death of these brothers the Brotherhood loses two good and faithful members, their associates true and steadfast friends, their parents dutiful sons and their wives kind husbands. We met with Brothers Flack and Brubaker in the Lodge room on the 13th, little thinking that it was to be the last meeting on earth. But in such an hour as we think not the Son of Man cometh.

In behalf of Union Lodge, No. 138, I desire to extend our sincere and heartfelt thanks to those who so kindly assisted us with the floral offerings and we deeply sympathize with their grief stricken widows and families.

S. S.

Personals.

DIXON is a dandy.

WALTON is a whale.

THERE are no flies on Hugo.

HYNES, Haines and Bryan are making it warm for the Pinkerton plugs.

TOM MEA is still Inspector of Meats at Minneapolis. He recently attempted to put Hannahan "in the soup."

HARRY BARNES, the noted equestrian of the Northwest, is training for the blind horse race which comes off in early spring.

To smoke a cigar is delightful,

To others there is joy in the cup—

But alas, there is something most frightful,

When Sebastian tells the boys to "wood up."

C. E. WARMINGTON, Secretary of Sacramento Lodge, No. 58, Rocklin, Cal., is jubilant over the arrival at his home of a nine pound boy.

I. M. DEAN, Master of Trinity Lodge, No. 83, deservedly has a host of friends in our Order, and for a long time has been known as the "Crown Prince" of the "Lone Star" State. The title is worthily bestowed by his peers.

D. W. J. MAHONEY, Secretary of Adopted Daughter Lodge, No. 3, deserves credit and praise for his activity, efficiency and promptness in business matters. When anything has to be done, straightway Bro. Mahoney goes and does it. With him time is money.

CON S. MCAULIFFE, Receiver of Guiding Star Lodge, No. 130, is not color blind, but the instant he sees a good thing he knows it, nor does he let it slip. Being always wide awake and on the alert, neither his Lodge nor the Brotherhood suffers by his neglect.

T. J. HAYES, Master of F. W. Arnold Lodge, No. 44, by virtue of mind qualities and devotion to the welfare of his Lodge and the Brotherhood is justly regarded as a leading spirit at East St. Louis, and fortunately he is in a position, where he can utilize his zeal for the good of the Order.

P. L. CUTLER, Secretary and Collector of Blooming Lodge, No. 40, is just the man for a blooming Lodge. In holding his two offices, of special importance, he becomes metaphorically in miniature a "twin brotherhood," possibly a "twin rose." At any rate he fills the bill, and makes excellent officers.

ERNEST B. MAYO, Master of Northwestern Lodge, No. 82, has done and is still doing yeoman service for the benefit of the Brotherhood in which he is justly regarded as both "useful and ornamental." He is sound as a nut on all questions and he can state them in a way both convincing and commanding.

WM. J. BRUMAN, Secretary of Buffalo Lodge, No. 12, is one of the men of our Order who understands his business, and in his mental, physical and intellectual make up is a credit to all concerned in giving him to the world and to the Brotherhood. As the cockney said of Niagara, "He's well got up."

OUR esteemed brother, F. X. Holl, is doing yeoman service at St. Paul in looking after the law makers of Minnesota, and in pushing through legislation in the interest of railway employes. Brother Holl is often taken for a member of the august Senate, and for being addressed as "Mr. Senator," proposes to bring suit to recover damages. Better not. You look so much like a state-man that any man has a right to believe you are a Senator, and pity it is that you are not.

CHAS. W. MAIER, Collector of Great Western Lodge, No. 24, is a man whose general utility qualities can't be beat. He knows just what "Collector" means, and he recollects and then collects. He don't forget, you bet. For the right man in the right place, he takes the cake.

THOSE who know Bro. Sam Dixon, of Baraboo, Wis., will regret to learn that in going over the "Q," he struck a blizzard which deprived him of his splendid suit of auburn hair, which erstwhile distinguished him among his comrades, and that he is now in danger of being known as the "Bald head of Baraboo." Let us all pray that his locks may never be shorter nor thinner.

DURING the closing days of January in the Northwest, the temperature suddenly fell several degrees below zero. On January 25th, the following was wired from Washington:

WASHINGTON, January 25.—To Observer Lyons, St. Paul, 9:55 a. m.: Holst cold wave signal. Severe cold. Temperature will fall to zero by 8 a. m., January 26th, and still lower next morning. GREELEY.

About the time stated the Dakota blizzard arrived over the Manitoba, as Greeley reported. It was Hannahan.

THOUSANDS of firemen, throughout the jurisdiction of the B. of L. F., will be glad to learn that Bro. S. H. Quackenbush, member of Golden Gate Lodge, No. 91, has doubled his earthly joys by taking to himself a "better half." Bro. Quackenbush is a stalwart friend of our Brotherhood at all times and everywhere, and his hosts of friends will be delighted to hear of his matrimonial venture, and will wish him and his bride the largest measure of happiness and prosperity that kind Providence vouchsafes to mortals. Bro. Quackenbush is now running a splendid engine on the Southern Pacific, and it requires no wizard gifts to know, when the machine is homeward bound, schedule time will be made.

Obituary.

William Conners Utterback, who died at Vincennes, Ind., at 12:04 o'clock, Wednesday morning, February 13th, and was buried at Highland Lawn cemetery, this city, by the Brotherhood of Locomotive Firemen of the two cities, was a son of Ellsworth and Martha Utterback, of Florida, Ill. The funeral services occurred at Vincennes. He was 34 years of age. Death resulted from kidney disease and complications arising from that trouble. While residing in Terre Haute he had been a brakeman and fireman on the I. & St. L. railroad, an employe of the Wabash Iron Works, a fireman on the Vandalla railroad, and a member of the city fire department. Securing employment as fireman on the O. & M. railroad four years ago, he removed from here to Vincennes, residing in the latter city until his death. He was married to Miss Elizabeth Christy, of this city, April 14th, 1879. His widow, aged parents, and four brothers survive him. Those who knew him intimately, found much in his character to awaken friendship, and those who were bound to him by sacred ties, learned to love him for his affectionate and happy nature. He was a brave and just man and a true and loving husband. On his death bed he prayed: "Oh, God, I would live for my dear wife, but, if it is Thy will that I must die, take me home," and awaited the end with composure.

He had valid reasons to suppose that he would soon be promoted to the position of engineer, and as the cold hand of death was closing upon his vitals, he said to his wife: "I told you that I would get on the right side," and then he made an attempt to manage the "throttle." He imagined that he was an engineer.

He was a man who never deserted a friend and never feared a foe.

TERRE HAUTE, IND., February 19, 1889.

Amusements.

PETROLEUM LODGE, No. 383, at Oil City Pa., gave their first annual ball January 1st at Armory Hall, and according to accounts published it must have been a most delightful affair. The hall was elaborately and beautifully decorated. The music was superb, being under the direction of Prof. Launtz. Seventy-eight couple participated in the "light fantastic" and besides the dancers there were fully one hundred others who enjoyed the occasion. A report before us says: Ed McAbee, of Olean, acted as master of ceremonies. The committee of arrangements was John Hankey, John Davis, Ed Magee and Al Jude. The reception committee consisted of W. B. Smith, Pat Sheehan, William Vannatten, F. Morton, Mike Fahey, Barney Moss and T. Clark; and Messrs. John Quirk, Wm. Sping, Thos. Martin, Fred Matthews, Sam. Lowry, Wm. McQuinn and George Hood officiated as floor committee. The ball was a grand success. We congratulate the brothers of No. 383, and wish for them a career of great prosperity.

THE brothers of Huron Lodge, No. 221, of Point Edward, Ontario, recently gave their fifth annual ball, and we are glad to know it was in all regards a success. A local paper devotes considerable space to an account of the brilliant affair, which came off in Odd Fellows' Hall, and says "the hall had been tastefully decorated by the skillful fingers of Thos. Watman, Geo. Renton, J. T. Henderson and Joe Gray, ably assisted by the ladies, who contributed the artificial flowers which added so much to the beauty of the scene. A large programme, painted with rare dexterity by Joe Gray, was suspended above the front entrance. Under it was perched a locomotive headlight on a bracket hung with bright tri-colored material pulled together at the base so as to form a triangle. Just below the headlight was the word "Huron" in letters of white cotton batting, and across the headlight the number of the Lodge, 221. At either side were gilt horseshoes containing mottoes. Festoons of colored paper and evergreen, and numerous pictures were gracefully arranged around the walls, and over the stage was the motto, "Welcome to the Fifth Annual Ball of Huron Lodge, No. 221, B. of L. F. of N. A." The monograms of the various orders framed in evergreen and placed under the slide lights, completed the artistic interior adornment." The ladies aided the brothers in decorating the hall, and 105 couples participated in the festivities. The music was fine and the supper in the highest degree enjoyable. There were many pleasant episodes, and all were delighted. That's the way to have a ball.

THE *Junction City Tribune*, prints a highly readable account of the musical and literary entertainment given at Pasona, Kan., on the 18th of January last under the auspices of Great Western Lodge, No. 24, B. of L. F. It was a matter of profound regret that the Grand Officers of the Brotherhood could not attend the entertainment owing to business which could not be postponed, and in the case of Grand Master Sargent, the disappointment was specially annoying as he had contemplated attending, but was called to California to adjust grievances. We are glad to know that the entertainment was a brilliant success and came fully up to expectations. The *Tribune* says: "One feature, provoking an enthusiastic encore, was a song entitled 'The Great Kansas Route,' by a double quartette of locomotive firemen, in costume, with caps and overalls, whose neat and tidy debut was herded by the blowing of a locomotive whistle; in obedience to this signal the scenes moved back, disclosing a life size view of a real locomotive, with its headlight and slide lights streaming down the stage. This locomotive was appropriately numbered with a big "24," and displayed the monogram "B. of L. F." elaborately wrought midway between pilot and smoke stack. The combined

effect was startling, and agreeable as well. Space will not permit us to refer to other musical numbers on the program, though some were deserving of special mention. Miss Mamie Pierce of this city rendered 'The Blacksmith's Story' in a manner which brought her immense audience thoroughly in sympathy with its deep pathos; and, later in the evening, acquitted herself admirably, under unforeseen difficulties, in the dramatic recitation of 'The Royal Princess.' Miss Sue Fessenden recited 'Light on Dead Men's Bar' with graceful gesture and pleasure voice giving promise of much latent talent. Miss Anna Smith and Mr. E. Simonson also gave recitations which were well received.

BUFFALO Lodge, No. 12, B. of L. F. recently gave one of their enjoyable entertainments in the way of a ball, in Music Hall, of Buffalo. The hall has a spacious auditorium, but its capacity was severely taxed on the occasion to accommodate the guests of No. 12. The success of the ball, says a local paper, was due largely to the energetic work of the various committees, viz.: Floor Directors—J. J. Knauff, D. E. Barry, W. J. Dodds, W. E. Brunan, J. H. Crossman, D. W. Hanley. Floor Managers—P. Springweller, W. E. Christian, D. Rivers, P. J. M. Namara, George Howell, J. Schufelt, W. J. Miner, H. Edmunds, W. A. Austin, Dan Dugan, D. Tate, H. Malone, T. O'Laughlin, J. A. Hathaway, J. E. Delaney, J. J. O'Neil, J. Barker, C. Dugan, G. A. Welch, G. H. Lyons. Reception Committee—R. Walton, chairman; T. F. Greenan, J. W. Jacobs, George Hagermeyer, T. A. Cole, W. Nalbach, T. Hewler, A. Bickley, A. Boxall, C. Lindenberg, F. Schweir, C. R. Miller, G. Woodward, G. Glassier, J. B. Liddell, G. Welsh, J. Cronyn, W. Kinrade, G. W. Bond. Splendid music enlivened the occasion, and the programme announced twenty-eight dances, in honor of various railroads, Brotherhoods and Grand Officers. Among the guests present were Police Commissioner Shafer, James Macbeth, Master Mechanic of the West Shore; E. A. Benson, Assistant Manager Wagner Car Works; J. Robinson, Master Mechanic Lake Shore; Peter Fowler, foreman Lake Shore shops; J. H. Murphy, Master Mechanic of the Erie; E. Van Etten, Division Superintendent of the Erie; W. B. Heckman, Master Mechanic of the Lehigh Valley; C. L. Sibley, Chief Clerk Master Mechanic's office, Lake Shore; Alderman Williamson and E. P. Murphy, District Engineer Fire Department. And also, G. H. Lyons, B. C. Stanton, wife and daughter, Misses Ann and Maggie Walton, Niagara Falls; Clarence VanZant, New York City; E. J. McNulty, Syracuse; Mrs. Emma Gibbons, G. A. White, Rochester; Mrs. and Mrs. Grant Parkis, Mr. and Mrs. James J. O'Neil, Charles Hevevor, and Miss Mary Bever, Bradford; Mr. and Mrs. George Jackson, of Fort Erie.

Such incidents in the history of a Lodge are always pleasant and cheering, and help amazingly to reconcile the boys to their toils and dangers.

Unknown Addresses.

JNO. ILLER—Is requested to correspond with the Secretary of Success Lodge, No. 33.

ANDREW RAUCH—Is requested to correspond with the Secretary of Success Lodge, No. 33.

DAVID CASEY—Who was a fireman on the Pacific railroad, out of Moberly, Mo., some seven years ago, is requested to correspond with his brother, John Casey, No. 97, James street, New Haven, Conn.

JOHN D. MURPHY—Is requested to correspond with W. F. Brundage, No. 1216 Larimer street, Denver Col. He is a fireman or engineer formerly of Moberly Mo., on the Wabash Railway, and later as fireman on the D. & S. P. Railway, out of Denver, some eight years ago.

Correspondence must in all cases be brief and to the point.

Subscribers must begin with the January, April, July or October number and expire with the year.

Change of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

MARCH, 1889.

MR. A. A. ALLEN, General Superintendent of the Wisconsin Central, in his treatment of employes, rounds out to the full dimensions of one of nature's noblemen. In a controversy about a grievance, brought to his attention by switchmen, Mr. Allen ordered that the fight against Association Switchmen must cease. Good.

* *

WE desire to call the attention of our readers, to the advertisement of Messrs. Reardon & Ennis, of Troy, N. Y., who are the manufacturers of the justly celebrated ventilated dinner pail. It is just the thing for railroad men, who have to take their dinners with them, and those desiring to purchase will find the firm reliable, and they need not hesitate to enclose P. O. order as required in the advertisement.

* *

THE *Switchmen's Journal* bears eloquent testimony of the sense of justice and fair dealing, which distinguishes the administration of Assistant General Manager Harahan, of the Lake Shore. Mr. Harahan is a gentleman whose quick perceptions of the right, and high sense of justice, are a guarantee that employes on his road will be dealt fairly with on all occasions, and that the largest measure of prosperity will be secured by his administration.

* *

THE *Minneapolis Tribune*, of January 31, shows that under the leadership of our wide-awake Bro. F. X. Holl, anti-Pinkerton legislation had been begun in the Legislature of Minnesota, similar good work is being done in other States, but final results will be known only when Legislatures adjourn. It is hardly to be expected that the hopes of workmen will be realized at once, but good work has been begun and in the near future, victory will be achieved.

THE Secretary of the Treasury recently reported to the United States Senate that the Government, under the Thurman act of 1878, has received from the Union Pacific Railroad \$7,773,589, and from the Central Pacific Railroad, during the same period, \$3,469,681, making a total for both roads of \$11,243,270. At that rate of "paying up" the debt due the Government will be squared about A. D. 2000.

* *

WE have on our table the constitution and by-laws of the Grand Division of the Brotherhood of Railway Conductors, whose headquarters are at Los Angeles, California. We have read the laws of the new and vigorous Order, and should judge them sufficiently conservative for the times. They provide for grievance committees, and it does not require a professional attorney to discover that the Brotherhood is in accord with the spirit of the times and has a fraternal regard for other brotherhoods of railway employes. The list of Grand Officers is as follows:

GEO. W. HOWARD, Grand Chief Conductor.
C. T. MOORE, Asst. Grand Chief Conductor.
D. J. CARR, Grand Secretary and Treasurer.
W. J. BIGELOW, Grand Senior Conductor.
J. G. WARDE, Grand Junior Conductor.
T. B. WHITESIDE, Grand Inside Sentinel.
J. E. HARTELL, Grand Outside Sentinel.
WM. M. USHER, Grand Chaplain.

It is needless to say that the Brotherhood of Locomotive Firemen wishes the new Brotherhood the largest possible measure of success.

* *

THE *Switchmen's Journal* for February voices sentiments upon the subject of federation with which the *Magazine* is heartily in accord. The *Switchmen's Association* takes no stock in coöperation. Its motto is Federation, and the wisdom of its conclusion can not be gainsaid. The *Journal* says, "Our committee have been waiting and still wait for an invitation to a conference. It occurs to us that it is high time that we move in the matter." We are clearly of the opinion that the time has arrived for a meeting of committees, and we do not doubt that steps for such a meeting will be taken at an early day. Federation is the desideratum, the one thing in which hopes of success center. When it comes it should come to stay. The subject needs to be discussed in all of its bearings. No mistakes should be made, nor does the subject present such obstacles as to suggest doubts. There is a will to federate and there is a way to federate. As the committees of the federating orders approach the subject the way will grow clearer. We think we are justified in assuring the *Switchmen's Journal* that its patience will not be unnecessarily tried, and that the discussions that are going forward are timely and prudent.

THE LUNCH FIEND OF THE DELAWARE.

[Dedicated to the original and only "Lunch Fiend," but not authorized by the Atlanta Convention.]

I have straddled my Pegasus, and I'm galloping up Parnassus, and I'm going to take a drink at the spring,
Where oft the tuneful nine, in the Grecian olden time, used to quench their thirst, and then like angels sing.
I am confident my ambition, will be fruitful of fruition, and I'm spurring up Pegasus to get there,
And when I've drank enough of the muse inspiring stuff, I'm going to sing in honor of the "Lunch Fiend of the Delaware."

To the extent you are able, get your books of fiction, fact and fable; this done, call in your statisticians,
For I'm going to make revelations that will astonish all the nations, their prophets, astrologers, soothsayers and physicians.
I am going to tell a tale, stranger than Jonah and the whale, a story that would make Munchausen tear his hair,
And yet, it is as true as that the skies above are blue, and 'tis all about the "Lunch Fiend of the Delaware."

I am going to tell the feats of this wonderful lunch fiend when he eats, how everything in sight disappears,
How, when he has a hunger spasm, his mouth opens like a chasm, and beholders become palely with fears.
That a famine he'll create in every territory and state, a calamity that calls loudly for fasting and for prayer,
For God knows there ne'er was seen, since the day that grass was green, such an eater as the "Lunch Fiend of the Delaware."

In the name of every glutton that ever died of eating mutton, beef, beans, pork, pickles, poultry, possum, goose or quail,
I am willing to assert, to say nothing of dessert, that since Noah built his ark and set sail,
That no one e'er beheld the sight, of such an amazing appetite, such a stomach and digestion, and I'll swear,
That since the dawn of creation, no kindred tribe or nation has produced the equal of the "Lunch Fiend of the Delaware."

Entering a restaurant, feeling a little gaunt, his eye takes in the situation quick as a flash,
Then his wonderful stomach capacity, and astonishing rapacity, suggests the query, will the hash,
The sandwiches and the eggs, frog and chicken legs, crackers and cheese, in fact, the entire bill of fare
Be sufficient to stuff the fiend till he cries enough, this *sui generis* "Lunch Fiend of the Delaware?"

By all the pagan gods, this lunch fiend is by odds, a gormandizer, whose consuming powers are without a parallel,
And often friends relating (as if under oath were stating) have forced the exclamation, "Wonderful to tell!"
And as the story they were telling of the dishes, kept on swelling, the listeners would exclaim, "Well, I declare,
There ought to be a law, for a time to close the maw of this monster 'Lunch Fiend of the Delaware.'"

But the imagination confesses prostration, fancy folds its wings and fiction meekly surrenders,
And as in dazed contemplation, angels demand an explanation, Great Jove makes an effort and bursts a suspender,

And declares he never hurled into space a world that has produced an eater who can in any wise compare

With the man, who, when he eats, all competitors defeat as easy as does the "Lunch Fiend of the Delaware."

And now, my hungry Pegasus, having galloped up Parnassus, and halted where the muses used to meet,

I set me down and wonder what in the name of thunder there is left in the wide world fit to eat?

For where'er my vision roams, I see nothing but trees and stones, there is nothing left to eat anywhere,

And I have a notion that in earth, air and ocean, All things have been devoured by this "Lunch Fiend of the Delaware."

But there is no use in squealing at this terrible revealing, let us die like heroes, singly, or in gangs.

True, 'tis pretty bad, there's not a crawfish, frog or shad left to mitigate the sharpness of our pang,

Still, as we waste away, growing thinner day by day, let future generations take warning, and beware

Of such strange, monster eaters, such all devouring creatures as the prodigious "Lunch Fiend of the Delaware."

—C. H. Ophouse.

THE ENGINEERS ON THE "Q."

The *Beacon of Progress*, published in Boston, Mass., prints the following:

Perhaps it is "taking ground against labor and in favor of capital" to say it, but we confess that we cannot discover what is the logical position of the former engineers of the Chicago, Burlington & Quincy road, what claims they have been urging on the company, or what questions they were which were reported in yesterday's dispatches to be near a settlement. They held positions which they risked when they went on a strike. If there was any weapon in their armory which they did not employ in their conflict with the company, what was it? They tried boycotting as long as they dared. While they were not collectively responsible for the use of dynamite, and did not collectively approve its use, dynamite was nevertheless employed to help them. Having tried everything, they failed. Their places are all filled. The road owes them nothing. Yet they still act and talk as though they are to-day employees of the company, temporarily out of work, who are unjustly treated because they are not re-employed. They forced the company into a contest; they decided what should be the stakes and the reward of victory; they lost the game; and now they treat it as a grievance that they cannot have things as they were before the game began. When the contest was fiercest they enlisted every engineer of every other road whom they could influence, to help them in their cause. They even called to their help brakemen and switchmen of the Burlington and other lines. Yet they profess to regard their suspicion that other companies helped the Burlington company as an atrocious outrage. Is not sauce for the goose sauce also for the gander? Is it a part of the contention for the cause of labor that workmen may combine, but that every combination on the side of capital shall be an unpardonable offense?

The foregoing is about what we would expect of a *Beacon of Progress* in the Yankee metropolis of pork and beans. It smells of codfish, but is more characteristic of a shark. The writer is correct—he "takes ground against labor and in favor of capital." His sentiments are those of a cold, calculating, callous defender of the wrongs which capital

perpetrates upon workmen and women, and nowhere is this hard heartedness more conspicuous than in Boston and Massachusetts. If all that it says of the engineers on the C., B. & Q. were true, they are entitled to the sympathy of all right thinking men. The engineers and their coemployes had made the C., B. & Q. one of the richest corporations in the land, and it was, in its treatment of its engineers, the meanest corporation in the land. It had no sense of justice, and so implacable was its hatred that it preferred to sink \$10,000,000 or more of money than to do an act of justice, and that it might make a point against the engineers, it outraged all laws, human and divine, by employing Pinkerton liars who care no more for perjury than they do for murder, and would commit either, or both, a dozen times a day for pay. The striking engineers did hold positions which "they risked," but they did not take the risk until every other honorable means had been exhausted to secure justice and fair dealing, and Bunker Hill monument, in sight of the *Beacon of Progress*, is an everlasting advocate of resistance to tyranny, of risking all, everything, to overthrow oppression. The *Beacon of Progress* says the C., B. & Q. owes these engineers "nothing." That is infamously mendacious. It owes them and their co-strikers everything. They were its faithful employes who gave the corporation prestige, wealth and which it used to crush them, and because it did crush them the *Beacon of Progress* chuckles and glories in the victory of "capital" and in the woes of workmen. It says "they forced the company into a contest." Just the reverse, the company forced the engineers into a contest, just as Great Britain forced the colonies into a contest. The British hired Hessians and savages to kill colonists, and the company hired Pinkertons, worse than Hessians or savages, to commit perjury and forgery, and if necessary, murder, to gain a victory. It won (?) but the victory entails upon the company an eternity of obloquy. "It is a long lane that has no turn," and the C., B. & Q. will eventually have cause for lamenting its triumph.

* * *

The way labor interests are managed in Minnesota, indicates what workmen may do, when in earnest, in shaping legislation. The Minneapolis *Tribune*, of February 7th, gives a lengthy account of what is being done in the interests of workmen. The *Tribune* says: "A good many measures which the laboring men—or, more exactly, the labor organizations—are backing are to be brought up at this session. Representatives of the trades assemblies of the twin cities are on hand watching them, and watching the members, not only when it comes to a final vote when the house and senate journal

will show on which side the members stood, but watching the committee-rooms and listening to the debates, with notebooks in their inside pockets, on which the sentiments and actions of the members are recorded." This is the right way to do. What labor gets, it has got to work for persistently and intelligently, boldly and uncompromisingly. This is being done in the Minnesota legislature, and by no man there or elsewhere, more courageously, than by our brother fireman, F. X. Holl, who is always on hand and able to give a reason for the faith that is in him. He never grows weary of watching. He is always on the alert. The *Tribune* says of him: "F. X. Holl, of Minneapolis, has been a regular guest at the legislative halls for several days, and Labor Commissioner Lamb has been devoting considerable time to the sessions himself. Mr. Holl is just now watching the fate of the bill to shut out Pinkerton men with very solicitous eyes. The bill is backed by the labor organizations, who say they are tired of the interference of hired police, who carry concealed weapons and are sent in squads to shoot down men who would be peaceable if they were not irritated into discord by the very presence of these men. Many bills which the labor organizations back have been prepared and will be introduced at an early date." The workmen of Minnesota by united action have secured a number of members of the legislature who are ready to champion the cause. Among them is Senator Hiram F. Stevens, of Minneapolis. He is known to be the friend of the workman, and is introducing valuable measures. We expect to hear a good account from Minnesota when the legislature has adjourned.

* * *

EDITOR HILL, of the *Locomotive Engineer*, says:

The new dress and size of the *Firemen's Magazine* puts it far ahead of all other labor organs. Editor Debs has a way of showing up wrong and abuse that is at once conclusive and manly. The firemen are justly indignant, that, after all they have suffered and lost in the "Q." strike, the engineers should proceed to call off that battle, without consulting the firemen. And who can justly say that they have not just cause for complaint? What has become of the "twin B's"?

The standard excuse for not "consulting the firemen," is, that the B. of L. F. was "forgotten." The B. of L. F. "twin" was lost to remembrance—had passed out of mind. This assumed obliviousness was simply an insult. The Richmond convention did not forget the B. of L. F., and the pretense only magnifies the affront. For such treatment, the B. of L. F. has a right to be indignant, to be otherwise than justly exasperated. would be proof positive that locomotive firemen, members of the B. of L. F., are totally without self-respect, and so deficient in sensibility, as to accept insult and contempt without protest. Such is not the fact.

A SEPTEMBER DAY.

Sitting alone 'mid the floating shadows,
 Dreaming of hours full of rapture sweet,
 Spent with my love where the fruitful meadows
 Filled up a picture of joy complete,
 Memory vividly brings before me
 Every scene that has passed away,
 And pleasing fancies are floating o'er me,
 Thinking upon a September day.

The hills were brown and the grain was yellow,
 The trees were tinged with an autumn hue,
 The fruit hung down both ripe and mellow,
 Beneath a sky of the deepest blue,
 The air was rich with the scent of clover,
 The zephyrs toyed with the new-mown hay,
 As I sat and rode alongside my lover,
 That long departed September day.

Her eyes with the fires of love were beaming,
 Her form was lithe and of queenly mold;
 Her hair was in graceful ringlets, streaming,
 And o'er her shoulders profusely rolled,
 Her voice like the notes of birds when mating,
 Full of the blooming joys of May,
 Thrilled me and kept my heart dilating
 With new found bliss that September day.

A balmy feeling of perfect pleasure
 Seemed to possess both her heart and mine;
 And rapture filled out a flowing measure
 Of nectar sweeter than richest wine,
 Into our souls through our eyes were flashing
 Glances of love in a ceaseless play,
 Closer and closer our hearts enmeshing,
 That dreamy delightful September day.

Many moons have changed since those hours de-
 parted,
 And time is moving with onward stride.
 But I know my love is as faithful hearted
 As she was the day of our autumn ride.
 And while memory lives she will rise before me,
 A peerless queen in her bright array,
 Shedding the balm of her presence o'er me,
 Just as she did that September day.

Shandy Maguire.

LOAN OF \$25,839.60.

In all matters relating to finances of the B. of L. F., there should be no concealments. Frank and full statements are always in order; and so far as the Grand Lodge of our Order is concerned, such statements are always made promptly and fully when required, or when there appears a necessity for them.

In the month of October, 1888, owing to the exigencies of the strike on the C., B. & Q., money was imperatively demanded to enable our Order to respond to the necessities of members engaged in that notable struggle. The membership was everywhere putting forth its energies to meet the demand, but there was at the time designated, a lack of funds. At this juncture the B. of L. F. accepted a loan, amounting to \$25,839.60 from the B. of L. E.

It appears that an impression has gone abroad that the B. of L. E. *donated* to the B. of L. F. the amount named. Nothing could be further from the truth. Such a donation, had it been tendered, would not have been accepted. The transaction was the result of obligations assumed by the B. of L. F. to pay its members certain stipulated

amounts monthly, and as assessments had been suspended until the convention met and took action upon the subject, the exigency arose, that money must be borrowed, or the striking firemen on the C., B. & Q. must suffer. The money was borrowed, *not donated*, and the amount so obtained, has been *paid back in full*. In making payment, interest was tendered, but not accepted.

In the foregoing statement the Brotherhood has all the facts. The money was borrowed to bridge over an emergency. It was borrowed to meet pay-rolls promptly and at a time when every consideration of justice to the heroic strikers demanded prompt action. The obligation to the men was met, and now the money due the B. of L. E. has been paid in full.

The B. of L. E. is entitled to our thanks for the timely assistance rendered. It is fully appreciated, and the B. of L. F., not less magnanimous, holds itself in readiness to reciprocate the favor at any time, and at all times, when it is in its power.

* * *

THE *Railway Conductors' Monthly*, in its February issue, referring to the fact that the strike on the "Q." has been declared off, injects into the article the following sentences: "It will be a long time before those who are still out of employment can hope to secure situations of any kind, much less the old ones." * * * "It seems to us that the outlook for these poor misguided men is anything but bright, and *from the bottom of our heart, we pity them.*" We have italicized a few words because we desire to say that

"Notes of sorrow, out of tune, are worse
 Than priests and fanes that lie."

When the firemen on the "Q." were seeking an honest redress of their wrongs, what was the position of the *Conductors' Monthly*? It was to help a great and powerful corporation to crush and degrade its employés and advocate scabbing. "Pity!" By all the shrines where men of honor and integrity worship, the declaration of the *Monthly* is a Judas Iscariot kiss. It talks about its "heart," an organ more like the gizzard of an ostrich filled with scrap-iron, the waste of a tin shop and gravel, than a human heart, capable of feeling for the woes of oppressed workingmen. "Pity them!" Yes, as a wolf pities the lamb or a vulture its prey. Besides, no one is appealing to the *Conductors' Monthly* for pity. In the day of workingmen's trial and peril, it takes the side of the strong against the weak, and that there may be no mistake in regard to its ineffable degeneracy, advocates scabbing, as an evidence of its sorrow over the woes of honest toilers. In the temple of hypocrisy, the *Conductors' Monthly* would stand a fair chance of obtaining the position of High Priest.

THAT LAW!

The B. of L. E. some years ago, enacted a law, which is still in force, providing that no engineer, a member of the B. of L. E. shall be eligible to membership in the B. of L. E.

It is ostracism, pure and simple.

It is a standing insult to the members of the B. of L. E.

It is an intimation that in some mysterious way, the B. of L. E. stamps upon its members such an insufferable stigma, that the B. of L. E. cannot and will not tolerate the stain.

For the passage of such a law, the B. of L. E. must have had what it supposed were good and sufficient reasons.

We desire the *Engineers' Journal* to state the reasons for the passage of the law, to which we have referred.

We invite any member of the B. of L. E. to give the reasons for the passage of the law in question.

The columns of the *Locomotive Firemen's Magazine*, are open to every Locomotive engineer, members of the B. of L. E. to give any and all reasons for the passage of the odious law.

We want plain talk—words that weigh a pound, fired directly at the law. No gush—of that we have had enough—no hedging, no coverts, no subterfuges, but reasons, if there are any reasons to be given.

Locomotive firemen, members of the B. of L. E. demand with ever increasing emphasis to know the reason or reasons, why their Brotherhood, which is constantly engaged in instructing and graduating firemen to the position of engineers, is made to appear before the world, as unworthy of recognition by the Brotherhood of Locomotive Engineers.

Be it remembered that the B. of L. E. is the only organization that has issued an edict against the members of the B. of L. E. A locomotive engineer, a member of our Brotherhood, can join any organization, social, political, religious or fraternal in the world without renouncing his allegiance to his Brotherhood, *except the B. of L. E.*

Let it be understood that all the gush about the "Twin Brotherhoods" does not explain the B. of L. E.'s law, by which members of the B. of L. E. are consigned to perpetual banishment from the B. of L. E. We can not understand why an engineer is prohibited from joining the B. of L. E. simply because he belongs to our Order. In what respect is an engineer who is a member of the B. of L. E. worse than one who isn't? Why are the doors of the B. of L. E. barred against all applicants who happen to belong to the B. of L. E.? Our columns are open to any one who can or will answer these interrogatories.

* * *

The Trades Assemblies of Colorado are wide awake and are making strenuous efforts

to have the General Assembly of that State to enact laws for the general welfare. In a memorial to the legislature there is a demand for the enactment of eight hour laws, as follows:

1. Regulating the instruction of children in our public schools.
2. To secure the adoption of a uniform standard of text-books for the different school districts of the State, thereby reducing an unjust and injudicious source of constant expense.
3. The enactment of a law which will prevent or regulate the employment of children in manufacturing establishments.
4. Regulating the duties and relations of employers and employes.
5. The passage of a law controlling the carriage and shipment of persons on or by railroads in this State.
6. An act requiring sleeping or refreshment car companies to pay their employes sufficient salaries to justify service without insult or neglect to passengers.
7. Requiring companies employing uniformed servants to protect employes from loss on liveries.
8. To secure payment for mechanics and laborers when employed by contractors upon State, county and city buildings and institutions.
9. The establishment of employment bureaus under supervision of State officers.
10. The better regulation of employment agents through city charters.
11. The enactment of a law for liability of employers for injuries received by employes in the performance of duty. Recent fatal accidents occurring through neglect of corporations to provide precautionary measures of safety, appeal for a stringent law covering damages for loss of life and bodily injury.
12. Requiring the payment of wages in coin or currency and abolishment of the truck system.
13. A law regulating usury and establishing a maximum rate of interest.
14. A lien law in the interest of the mechanic and laborer as well as the contractor and furnisher of material.
15. The establishment of an eight-hour working day for officials and citizens.
16. Repeal of the conspiracy law.
17. Regulating the business of private detectives and agencies in Colorado, to the exclusion of foreign concerns.
18. Making Saturday afternoon a legal holiday.

Such action on the part of workingmen indicates very conclusively that workingmen throughout the country are waking up to the importance of the ballot.

* * *

NEXT to the *Locomotive Engineer*, which is indeed the engineman's own paper and which is sure to win its way to favor wherever introduced, our friends of the *American Machinist* commend themselves to the engineman's attention by the many articles of interest which they are giving to that class of men and by the practical papers on drawing and modern locomotive building and other subjects which must prove of incalculable value to the student of mechanics. Besides this, the editors are ever to be found advocating a fair remuneration for intelligent labor and the recognition of a worker as a man, and these principles will be sure to be recognized by railroad men as possessing the true ring and will no doubt be appreciated accordingly.

THE NEW YORK AND BROOKLYN STREET CAR STRIKE.

The somewhat notable street car strikes in Brooklyn and New York are worthy of more than a passing notice. The Brooklyn strike began January 25th, and the New York strike on January 29th. The men who were by these strikes thrown out of employment numbered about 7,000. *Harper's Weekly* of February 7th, said:

The gist of the double dispute is as follows: The street railroad men in New York City demand \$2.25 a day for "ten hours of work to be performed in twelve"—an expression which means that the time in which the cars shall be in motion shall be ten hours, and that the two hours over shall be counted in for waits, meals, and in taking the car and its horses to the stable. But the principal grievance is that the companies refuse to recognize the committees of the Knights of Labor as mediators between themselves and the men; they will deal with the men directly or not at all. On the other hand, the demand in Brooklyn of the strikers is for \$2 a day for ten hours' work to be performed in twelve—a demand which has been acceded to by every surface road in the city except those of the Atlantic Avenue Company, of which Mr. Richardson is the President. That company offers to compute pay by trips and parts of trips in such a way as to give \$1.71 for ten and about \$2 for twelve actual hours.

The probabilities are that there would have been no strike if the officers of the various companies had been willing to arbitrate the questions at issue, and it is just here that the special significance of the strike appears. The officials have determined not to recognize labor organizations, except in a few cases, and some of them determined not to employ men who were members of labor organizations, and have gone so far as to exact a promise from their employes that they will not join any labor organization while employed on their roads. On some of the roads men are required to sign an agreement that they do not belong to any labor organization and will not join any during their employment. The *New York World*, referring to this phase of the subject, says:

The officials who seek to bind their employes in such a manner may never have heard of the existence of a state law prohibiting such agreements, and that they render themselves liable to fine or imprisonment, or both. Such, however, is the fact, and the *World* prints the law for the information of those men. The act is known as chapter 638, laws of 1887, section 171A, of the penal code:

Any person or persons, employer or employers of labor, and any person or persons of any corporation or corporations, on behalf of such corporation or corporations, who shall hereafter coerce or compel any person or persons, employee or employees, laborer or mechanic, to enter into an agreement, either written or verbal from such person, persons, employee, laborer or mechanic, not to join or become a member of any labor organization, as a condition of such person or persons securing employment, or continuing in the employment, of any such person or persons, employer or employers, corporation or corporations, shall be guilty of a misdemeanor. The penalty for such misdemeanor shall be imprisonment in a penal institution for not more than six months, or by a fine of not more than \$200, or by both fine and imprisonment.

It will be seen that the officials clearly vi-

olated the laws, and the indications are that an effort will be made to enforce the laws. The *New York World*, one of the greatest newspapers in the world, neither subsidized by capitalists, nor blinded by wealth, is of the opinion that the failure of the strike will have a serious effect upon the Knights of Labor for a time, but says that "the history of labor movements, however, shows that while for a time organizations may decline after defeat, the memory of what they effected can never pass, and when grievances are to be righted, they always, Phoenix-like, arise from their ashes. The corporations will take advantage no doubt, of their victory and in time the men will have to work long hours for small wages. Then the recent defeat will be forgotten, the men will join a labor organization in defiance of managers, and agreements, and with experience to teach them, the result may be reversed. In the meantime other trades and callings will be put to the test by their employers. The result will depend very much on the condition of the organizations and the labor market." There can be no doubt but that there is to be a trial of strength all along the lines. Everywhere a purpose is intimated to break down labor organizations—the supreme purpose of which is to secure and maintain fair honest wages, reasonable hours of work, and manly treatment. Such things should secure public approval, for they contemplate no wrong to anyone, only justice to all. The best interests of society are involved, for communities are never so secure and prosperous as when labor is employed at fair wages. The *World* says editorially: "If it be true that some of the street car companies are compelling the men whom they are now employing, to sign pledges not to join any labor organizations, then it is time for the law to intervene. Such an exaction is a gross outrage such as corporations could only demand from slaves. Why have not men who toil a right to organize as well as the men of capital to incorporate themselves? The corporations may induce the needy men to forswear their allegiance to the hated Knights of Labor. But their victory is not conclusive. Organized Capital cannot deny to Labor the right to organize for mutual protection. When Greed combines Need will unite. The form of association may change, but a union will exist. It is a necessity imposed and justified by the first law of nature—that of self defense. And it is a right of American workmen which cannot be permanently annulled by the fiat of any railway boss." It goes without the saying that American workmen will organize, and, after a time, they will federate for their own protection and welfare. The work is progressing, and it is folly to suppose that one, or a dozen defeats, will arrest the movement.

HELP FOR THE C., B. & Q. STRIKERS.

We beg that the caption of this article will not alarm the reader, especially if he be a Brotherhood fireman, for to them it is most particularly addressed. What we mean by "help for the C., B. & Q. strikers," is to help those of them who are unemployed, to find work. There are hundreds of these unemployed strikers, who are members of our Brotherhood. They are in need of aid in finding employment, and the longer they are idle the more strongly do they appeal to the members of the Brotherhood to render them assistance. This can be done in many ways, and no opportunity to render such service should be neglected, but on the contrary should be seized with alacrity.

We realize to the fullest extent that it is not in the power of many to give money, besides, were it in their power, they could claim with great justification, that of cash they have given with such generosity as has been productive of great impoverishment. In this regard the members of our Order have dignified and glorified the term "Brotherhood." They have illustrated its meaning by contributing in lavish amounts their hard earned dollars, until encomiums however highly wrought, scarcely do justice to the subject, and the verdict is, "well done." But it should be remembered that this appeal is not for money. It is for that which every Brotherhood fireman can give without reducing the sum of his wages. In what way then, it may be asked, can a Brotherhood fireman help the unemployed strikers on the C., B. & Q. to better their condition? We answer, first, when one of these victims of corporate oppression comes along in search of work, take him by the hand, let the grip be warm, fraternal, brotherly. Let words be those of kindness and sympathy. Let the eye speak as well as the tongue, and tell the wandering brother that he has found a friend who takes an interest in his welfare. This is not money, but it is often better than money. Kind, cheering words have the power to dispel despondency and banish despair. God knows these can be given, and they are often priceless. But this is not all. When a Brotherhood fireman, a victim of the C., B. & Q. strike, makes his appearance in search of work, a vigorous effort should be made to find employment for him. In doing this every effort possible should be made. Kind words are right, but not enough. The brother should be taken to the Master Mechanic, to the proper official, and special effort made to find work. It may happen that a fireman is not wanted, but that some other job can be obtained, and as almost anything is better than idleness, the man in search of employment could take the position and wait for something better—the supreme demand being work. If all efforts fail and employment

cannot be found and the brother is required to move on, then by all means see that he obtains free transportation to another place, and let this policy prevail throughout the entire jurisdiction, and our word for it, the time will not be long until every Brotherhood fireman who went down in the C., B. & Q. struggle will be at work, earning wages, saved to the Brotherhood by the kindness, sympathy and acts of their brother firemen.

In this connection it is proper to say that every Subordinate Lodge will have a list of every *bona fide* Brotherhood striker on the C., B. & Q., so that there may be no apprehension that the kindness of the members is being bestowed upon an impostor.

We need not remind the members of our Order that we have what is termed an employment bureau, designed to help members of our Order who are unemployed to find work. And here we desire to urge upon the attention of the membership the great importance of promptly forwarding to the Grand Lodge any information relating to vacancies or probable vacancies anywhere, so that we may help an unemployed brother to employment. In this matter let us be in earnest and act promptly and energetically, and great good will be accomplished.

* * *

THE *Switchmen's Journal* says: "The switchman's life is conceded by all familiar with its details to be one of the most hazardous. Their work requires one at all times to have his head clear and the complete control of his nerves." That the switchman may be in a condition to perform his duty safely and satisfactorily, the Switchmen's Mutual Aid Association, declared in its constitution that "any member hereafter engaged in the sale of intoxicating liquors, unless he resigns his membership shall be expelled from this association."

"Any member found guilty of drunkenness shall be suspended for the first offense, and a repetition shall be punishable by expulsion."

Such constitutional provisions are intended to improve the condition of switchmen, and make them better workmen, and is therefore, directly and specially beneficial to the roads upon which they are employed. Their work being hazardous, they should be fairly paid; their purposes being honorable, their petitions and protests should be accorded honorable treatment. When switchmen have just grievances, why should engineers assume superiority and treat their wrongs with "strict neutrality?"

* * *

THE United States has about one-half of the railroad mileage of the world. It is stated that the investment represents \$9,000,000,000 which would be equal to \$56,250 a mile including everything, and about 1,000,000 persons are employed.

MAN'S MORTALITY.

[The following poem is considered a poetical gem of the first order. The original was found in an Irish MS. in Trinity College, Dublin. The reason, says the *Literary*, to think that the poem was written by one of those primitive Christian bards in the reign of Diarmid, about the year 554, and was sung and chanted at the last grand assembly of kings, chieftains and lords, held in the famous halls of Tara.]

Like a damask rose you see,
Or like a blossom on a tree;
Or like the dainty flower in May,
Or like the morning to the day,
Or like the sun, or like the shade,
Or like the gourd that Jonah made;
Even such is man whose thread is spun,
Drawn out and out and so is done.
The rose withers, the blossom blasteth,
The flower fades, the morning hasteth,
The sun sets, the shadow flies,
The gourd consumes, the man—he dies.

Like the grass that's newly sprung,
Or like the tale that's new begun,
Or like the bird that's here to-day,
Or like the pearly dew in May,
Or like an hour, or like a span,
Or like the singing of a swan;
Even such is man, who lives by breath,
Is here, now there, in life and death.
The grass withers, the tale is ended,
The bird is flown, the dew ascended,
The hour is short, the span not long,
The swan's near death, man's life is done.

Like to the bubble in the brook,
Or like in a glass much like a look,
Or like the shuttle in weaver's hand,
Or like the writing on the sand,
Or like a thought, or like a dream,
Or like the gliding of a stream;
Even such is man, who lives by breath,
Is here, now there, in life and death.
The bubble's out, the look forgot,
The shuttle's flung, the writing's blot,
The thought is past, the dream is gone.
The waters glide, man's life is done.

Like an arrow from a bow,
Or like a swift course of water flow;
Or like the time 'twixt flood and ebb,
Or like the spider's tender web,
Or like a race, or like a goal,
Or like the dealing of the dole,
Even such is man, whose brittle state,
Is always subject unto fate.
The arrow shot, the flood soon spent,
The time no time, the web soon rent,
The race soon run, the goal soon won,
The dole soon dealt, man's life soon done.

Like the lightning from the sky,
Or like a post that quick doth lie,
Or like a quaver in a song,
Or like a journey three day's long,
Or like a snow when summer's come,
Or like a pear or like a plum;
Even such is man, who heaps up sorrow,
Lives but this day and dies to-morrow.
The lightning's past, the post must go,
The song is short, the journey so,
The pear doth rot, the plum doth fall,
The snow dissolves, and so must all.

* * *

THE termination of the strike on the "Q." has been commented upon by the press generally, and by papers more or less devoted to railroad interests particularly. The *Locomotive Engineer*, in commenting upon the subject, says:

It has hurt the road, crippled its motive power, undermined its business, and cost it well up in the millions of dollars, and ends by

its officers agreeing not to become criminals by blacklisting the former employes. To the engineers, firemen and switchmen it has been a lesson, and has taught them several things that will make the Orders all the stronger for the trial. Firstly, it has shown that strikes do not pay, that violence will always be attempted in every strike and the strikers blamed for it. It has shown the very bad method of distributing money to strikers—which can be remedied. It has shown the engineers that the firemen are men of their word and honorable to the last degree, fewer firemen having become scabs than engineers. This lesson has long been needed. It has shown organized labor, far and near, what organizations can stand in case of trouble; it has shown that it is better to surrender half licked than to fight it out and get licked anyway—75 per cent. of the men were offered jobs in the proposed settlement, six months ago. * * * It will take the road years to recover its losses; the orders will recover all losses in a year, but individuals will suffer longer.

In estimating strikes to advance wages, or to maintain wages, it would be proper, we think, to consider a number of strikes together; to find out to what extent they have proven a failure, financially. Many strikes are successful, others are failures, while in others compromises are brought about and better understandings between employer and employé are secured. Again, strikes often involve considerations other than wages, as is well known. It has often occurred that employes receive at the hand of some underling official, dressed in a little brief authority, such treatment as ought not to be tolerated for a day, and which cannot be tolerated without the sacrifice of manhood. In every strike a principle is involved—at least such is the rule—the exceptions are rare. Just what sacrifices should be made to defend principle, every man must decide for himself, but the very moment that he realizes that his rights are abridged, that he is the victim of wrong and injustice, just that moment he should protest. He may for a time submit to the wrong upon the principle that discretion is the better part of valor, but no self respecting man, no full blooded American citizen will submit without protest, and if the wrong continues, in spite of protest and all peaceful means to secure redress, he will fight. It is the American way, the American idea, and when it disappears, when men will submit to wrong and injustice without protest and resistance, they are slaves, and no amount of special pleading will in the least change their status. To resist, will cost sacrifice—often of great severity—but they must be made, or serfdom prevails. There can be no spectacle more humiliating than to see American workmen so wedded to dollars, that they will accept any condition, however degrading, to save them. When the time comes in the United States, that the love of money becomes so overmastering, that workmen will not strike to break fetters and yokes, because of the cost, that will be the time when the banner of corporate power and greed will float triumphantly throughout the land.

GEORGE W. HOWARD.

The San Diego *Union and Bee*, of February 2nd, contains an account of the presentation to George W. Howard, Esq., of "an elegant solitaire diamond ring," by the employes of the San Diego Street Car Company, the San Diego and Coronado Ferry Company and the Coronado Railroad Company, of all of which companies Mr. Howard was Superintendent. Such testimonials of esteem, coming from employes at a time when business relations are about to be sundered, have special significance and value. On such occasions, diamonds not only scintillate, but speak, and become memorial tributes ever increasing in value as the ebbing and flowing tides of fate drift giver and receiver apart. Nor did the employes, in bearing testimony of their esteem for Mr. Howard, forget Mrs. Howard. On the contrary, their gallantry was equal to the occasion, and if anything could add to the pleasurable emotions of the recipient of the ring, it must have been to see that the men in his employ remembered the partner of his joys and sorrows, struggles and victories, in the shape of a diamond embellished bracelet.

Mr. Howard severed his connection with the companies we have mentioned to accept the responsible position of Grand Chief Conductor of the Brotherhood of Railway Conductors. In doing this the Brotherhood secures the services of a man whose practical knowledge of railroading, learned in the school of experience, is equal to that of any man within the entire range of our acquaintance. He has served as switchman, brakeman, fireman, conductor, engineer, yard master, train master, and was at one time Division Superintendent of the O. & M. As Grand Chief of the Brotherhood of Railway Conductors, he brings to the position a familiarity with the rights and needs of employes which cannot fail of being in the largest measure valuable, not only to the Order over which he has been called to preside, but to all other Orders of railroad employes, as also to railroad corporations. Such facts will at once give the Brotherhood of Railway Conductors standing and prestige of incalculable value.

It is our good fortune to know Mr. Howard well, and in writing of him and introducing him to the fifty thousand readers of the *Magazine*, we do but respond to our convictions that under his guidance and leadership the Brotherhood of Railway Conductors will at once advance to a front position, and hold it against all opposition.

The motto of the Brotherhood of Railway Conductors is, "Protection, Skill and Integrity." These are ringing words. They are the signs of evangelizing ideas. So far, in the world's history, the skill and integrity of workmen have not been properly rec-

ognized, rewarded nor protected. But a new era is dawning, and new Brotherhoods are being organized. "Protection, Skill and Integrity" are to have new champions, and in the list we hail with pleasure, born of hope, the Brotherhood of Railway Conductors, with George W. Howard as its Grand Chief.

* *

AN anti-Pinkerton bill, introduced in the Minnesota legislature, at once produced some lively sparring, which seemed to show the character of the opposition to the measure. One fellow, by the name of Brown, a man by nature and association qualified to be a Pinkerton himself, thought that the bill would help anarchy and he wanted Pinkertons to come. He was told that his assertion was unwarranted, and that those who wanted the bill passed were not anarchists, but intelligent men. Another senator said the Pinkertons "are just the ones who throw the bombs." Let it be understood that the men who are forever seeking to degrade and oppress labor, are the ones who favor Pinkerton mercenaries and cut throats. In this connection we reproduce an editorial article from the *Minneapolis Tribune* of February 6th. It says:

Senator Bowen's police bill is a meritorious one. Private concerns, which make it a business to perform political functions which are public in their nature, are no less a danger to society than are organized bands of bomb throwers. Lynching mobs, White Caps and Pinkertonism are manifestations of the same spirit, and are alike subversive of law and social order. The business of making laws and enforcing them is not competitive in its nature as some of the members of the senate seem to think. The people, as represented by the state, have a monopoly of this thing, and for once the *Tribune* is disposed to champion the cause of monopoly. We do not want Pinkertons, White Caps or lynchers to do the business of the state in Minnesota, any more than we want anarchists to murder the law and its officers. The people of Minnesota are perfectly able to enforce their laws and protect life and property without the assistance of hired ruffians from other states. They do not want any Pinkertons, and are in favor of a law preventing the agency from doing business in this state.

Everywhere an enlightened public sentiment is opposed to Pinkertonism, but the infamy has a strong foothold, and will require more than ordinary effort to dislodge it, but it can be accomplished. In the language of the *Tribune*, "Pinkertons must go."

* *

A BILL has been introduced in the Legislature of Illinois, providing that no board, commission, or officer acting upon behalf of the State shall employ any one other than an American or naturalized citizen, or one who has in good faith expressed an intention to become a citizen, and that he shall be able to prove such when placing any persons upon the pay-roll. Employment of an alien shall be construed to be a misappropriation of public money, and punished accordingly.

THE *Railway Conductors' Monthly* for February copies from the *New York Dispatch*, a few complimentary remarks as follows: "With conductors there is no grabbing of the throat, with the threat, 'Do this, or we will strike,' but instead, a respectful request is sent to the officers, etc. To this the *Monthly* responds: 'We have nothing to fear and everything to gain from this state of affairs, for we ask for nothing that is not right and just, and we are willing to acknowledge every man's right to govern his own business.'"

This is all whitewash, and very thin at that. The conductors are not willing to "acknowledge every man's right to govern his own business." Conductors do not acknowledge the right of railroad officials to put spotters on their track. They do not believe it is right that a "Thiel crook" should be set to watch them, and that one of these detestable crook spotters should go into court and swear away their characters. No, no, the conductors do not believe in such an infamous proceeding nor should they. The conductors, like other railway employes, have grievances. They don't like the way other men "govern their business," and are constantly making requests for railway officials to change the way they "govern" their business. If, by requests to have the government changed, a change is made, well enough—if not the conductors submit without regard to the indignity offered. If a conductor is told to scab, his very soul may revolt at the indignity, he may feel humiliated and degraded, but he scabs, because he can't strike. He sees a Thiel "crook" on his car, seeking an opportunity to brand him as a thief, and submits because he can't resent the insufferable indignity by striking—but, nevertheless, he is not willing to acknowledge that a man has a right to "govern his own business" that way and the *Railway Conductors' Monthly* in refusing to protest against such a method of "governing" business, condones to the extent of its ability the insult offered the very men whose money contributions support it.

* * *

THE *New York World*, in the late street car strike in the cities of New York and Brooklyn, exhibited from the first a just comprehension of the situation and had the courage of its honest convictions. The *World* said editorially:

The only way fairly to judge the case of the striking street-car employes, is, in imagination, to put yourself in their places.

What would you do if you were a car conductor or driver, compelled by an evasion of the State law to work twelve hours for ten hours' pay?

What would you do if, through a combination of the rich corporations operating the railways chartered by the people for public accommodation, you were paid for the support of your family only from 93 cents to \$1.75 for a long day's

hard and responsible work in all kinds of weather?

What would you do if combined capital, earning for itself dividends or stock-profits which enabled its possessors to live in reckless luxury denied to labor, as represented in yourself and your associates, the right to organize for mutual protection?

You who condemn labor for striking, and insist upon the right of every corporation to "manage its own business in its own way," without regard to the rights of others, would be very apt to view things differently if once you were put in the laborer's place.

It is very easy to say that if you didn't like railroadings at current wages and upon prescribed rules you would "go at something else." What else, for example? What can the greater part of the 7,000 striking men find to do, as a steady employment, which will enable them to better their condition? Would not their entrance in any field crowd other workers out?

What reason is there, except that found in greed and bumptiousness, for not giving the men fair wages for a fair day's work—\$2 for ten hours—and permitting them to act, as their employers do, through whatever agents they may select?

The foregoing is worthy of being committed to memory. Here we have the utterances of the most widely circulated newspaper on the continent, and probably the greatest newspaper in the world, coming to the rescue of over-worked and under-paid men and pointing out their just grievances in the very center of capitalistic arrogance and power. The *World* is not afraid of money bags. It does not cower in the presence of monopolists, trusts and syndicates. It can be just. It has the courage to speak, to ring the alarm bell. Working men should take courage. The press is coming to its rescue. The *New York World* wisely, courageously and opportunely speaks for the rights of the oppressed. Nor is this all, but the *World* promptly goes to work and has a bill drawn up in the interest of arbitration in connection with the strikers, to be presented to the Legislature of New York—which, "after reciting preliminaries places in the hands of of the Mayor the power to appoint two disinterested gentlemen, who, with the Mayor, shall constitute a Board of Arbitration. When trouble shall arise between any corporation and its employes, the arbitrators aforesaid shall be appointed, and inside of forty-eight hours after the corporation where the strike may be has been notified of the appointments made by the Mayor, it must name some disinterested person to represent it, in whom shall be vested full legal powers. Should the corporation fail to make such appointment, the Mayor shall appoint a suitable person to act." The work goes bravely on, and the redemption of labor from the curse of capitalistic oppression draweth nigh. All that is wanted to secure victory is harmony, federated action on the part of organized labor.

* * *

THERE are 25,000 employes in 498 canning houses of Maryland, most of whom are Knights of Labor.

CO-EMPLOYEES.

The legislature of Minnesota enacted the following law:

Every corporation operating a railway shall be liable for all damages sustained by any person, including employes of such corporation, in consequence of the neglect of agents, or by any mismanagement of the employes of such corporation, or in consequence of the willful wrong, whether of commission or omission, of such agents or other employes when such wrongs are in any manner connected with the use and operation of any railway, on or about which they shall be employed, and no contract which restricts such liability shall be legal or binding.

As a matter of course, strenuous efforts were made to defeat the passage of the bill in the legislature, and when it became a law, a further effort was made to have the Supreme Court of the state kill it; all efforts failed. The Supreme Court sustains the law, and the outrageous injustice of co-employe responsibility no longer disgraces the court practice of the great state of Minnesota. It is only required for railroad men to federate in such matters, to have unjust laws repealed, or just laws created, and the case of Minnesota shows what can be accomplished when the right has a fair hearing and fair play.

WE have the Minneapolis *Tribune* of February 11th, which gives a lengthy report of a strike which began February 9th on the Motor road, of Minneapolis. It seems that the officials had discharged their hostlers, and subjected the engineers to other embarrassments which they had determined to have removed. To bring this about the employes respectfully represented to the officials their grievances, and petitioned for redress. They were promptly told that nothing would be done. The officials would not listen to reason nor change their policy. Having received this ultimatum every engine on the road, February 9, at 10 o'clock A. M., was in its stall, and and not a train was running. This sudden change of affairs brought the officials to their senses. The next day at 2 P. M. a conference between the strikers and the officials was held. The hostlers were restored, the embarrassments complained of removed, and at 3 P. M. on the 11th day of February, after twenty-seven hours of strike, business was resumed. The men asked for an advance of ten cents a day, from \$2.90 to \$3.00. This was immaterial, and was not granted, the real grievance related to the discharged hostlers and other matters which was a constant source of annoyance to the men, and the requests of the men in these regards having been granted, the strike was off. It is worthy of remark and is specially mentioned by the *Tribune*, that the men "kept a close guard over the engines to prevent any injury being done them, as they said they were as anxious to prevent any destruction of property as the

management. They intended to commit no violence, but feared parties had been engaged for this purpose, that the damage might be attributed to the strikers. When morning broke they were all ensconced in a car, and not a moment's sleep had been taken by any of them during the night." Such facts are in the highest degree creditable to workingmen. Their demands are, with rare exceptions, just, and in granting them the best interests of society are subserved. The *Tribune* says that "the sympathy of the surrounding community was strongly with the men, and the news that they were about to return to work spread rapidly, and a large crowd collected at the depot to see the cars start once more. Everyone seemed pleased and the engineers received many congratulations on their victory."

THE Bloomington (Ill.) *Pentagraph*, in a recent issue, said: "There was but one millionaire candidate for United States senator before the Illinois legislature—Mr. Sidney Kent, of Chicago; and he received but one vote, that of Senator Burke, of the United Labor party. This is a circumstance worthy of note in view of the opposition the labor party has shown to capitalists and monopolists in the past." In commenting upon this, the Chicago *Knights of Labor* says:

There are millionaires and millionaires. Workingmen have no objection to millionaires as a class; they object to the use they make of their millions. Kent belongs to the small class of millionaires who do not become tyrants when they acquire millions. He was one of the first men in Packingtown to concede the eight-hour day. He not only conceded the eight hours but he conceded the justice of the demand and continued it after all the other packers had refused it, and when he found that he could not compete with other packers who worked their men ten hours sooner than compel his own men to return to the ten-hour system he virtually quit the business. It was a graceful acknowledgment on the part of the only member of the present Legislature who was elected on the labor ticket, and it was well merited on the part of Mr. Kent.

It should be understood that workingmen have no quarrel with millionaires who do not use the power of their money for the unholy purpose of denying labor its just rewards. Workingmen are simply struggling for justice, and they are going to have it in

On December 25th, Mr. Jno. J. Conolley, General Foreman of the machinery department of the Fremont, Elkhorn & Missouri Valley R. R., resigned to accept the position of Master Mechanic of the Duluth, South Shore & Atlantic, under General Manager W. F. Fitch, formerly of the F., E. & M. V. On his departure the firemen presented him with a handsome vest chain and charm as a slight testimonial of their esteem, and the boys regretted very much to part with him. They all wish him great success in his new position.

THE BROTHERHOOD OF RAILWAY CONDUCTORS.

We have informed the readers of this *Magazine* that in November last the Brotherhood of Railway Conductors was organized in the city of Los Angeles, Cal. The movement was consequent upon the fact that the Order of Railway Conductors, long established, had developed into a standing menace of the rights and interests of every other organization of railway employes. The O. R. C. was everywhere recognized as the pliant tool of corporations, without manliness, without courage, without ability to appreciate conditions, as ready and willing to submit to any command however humiliating, making its bread and butter, or bread and water, or its bread without butter, the standard, and the only standard of action.

Thousands of its members realized that the policy of the O. R. C. was vicious and venal and they tried to change it, but being defeated by a majority of *two*, or some other insignificant number of votes, and recognizing the abomination of scabbing, their indignation triumphed over their patience, and as a result, the Brotherhood of Railway Conductors was organized at Los Angeles, Cal., in November, 1888. The new Brotherhood has had, so far, unexampled prosperity, and already has a membership of over six hundred. Why this success? The question is easily answered. There are thousands of railway conductors who in principle and interest are in hearty alliance with other railway employes. They are champions of the right and abhor the wrong, and in every struggle they want to see the right prevail. Such men organized the Brotherhood of Railway Conductors at Los Angeles, and placed at its head Geo. W. Howard, than whom no better man could have been found on the continent.

The Brotherhood of Railway Conductors give special prominence to "Protection" in their declaration of principles, and the word, in the sweep of its significance, includes the dearest rights of workmen, and this being true, every organization of railway employes will wish it the largest possible measure of success, and will labor to disseminate its principles and promote its welfare.

* * *

On December 1st the Hartford, Conn., *Evening Post* announced the fact that all of its type-setting is done by machinery. In making the announcement the *Post* says:

No other daily paper in this country, if indeed in the world, has reached the same stage in its application of machinery to the requirements of its composing room. A few dailies, like the New York *Tribune*, the Chicago *News* and the Washington *Post*, have recently set a part of their type by machinery; but it has remained for the Hartford *Evening Post* to pioneer the new departure from the time-honored usage of newspapers to depend upon hand composition as the only reliable means for presenting their daily or weekly

issues to the public. There is perhaps no branch of mechanical industry in which there has been during the last hundred years so little advance, as in the art of type-setting. While the power printing press has practically revolutionized the publishing business, type-setting by hand is still performed precisely as it was in the days of Franklin, indeed ever since the invention of movable type; and it has long been a matter of very grave doubt whether machinery would ever supplement, much less supersede, the labor of the human "type-sticker." But it now looks as if the unexpected had happened, and the type-setting machine were about to take permanent place among the other labor-saving machinery which the present century has so wonderfully contributed to the material progress of the human race.

The Thorn type setting machine is run by steam or an electric motor and requires three persons to operate it. It can set six thousand and ems per hour, or from five to six times as much as the most rapid compositor. Men are not required to operate the machine, girls, answering every purpose and become, with little training, efficient operators. There are doubtless in the United States 75,000 type-setters. If girls are to be employed to operate the Thorn machine, when universally adopted, as the *Post* believes it will be, the "intelligent compositor's" mission will be gone, and the "art preservative" will be committed to the machine, which, according to the *Post*, does the work, not only more rapidly, but better. We do not object to the coming of the "labor-saving machine." It were useless even if it were prudent, and yet, the labor-saving machine which forces large numbers of men into idleness may not be in the long run an unmixed blessing. It is possible to have too much of a good thing, so much indeed as to create calamities. Men deplore idleness, and even now, men talk glibly of the "labor market" being oversupplied to a degree that makes the surplus a constant menace. With increasing surplus, there will be an increase of idleness, there will be a decrease of wages, and ultimately a condition of things that stout hearted men do not care to contemplate.

* * *

In England there has been among the miners great unrest relating to the low prices paid for mining coals, and a great many men struck for an advance of 10 per cent. In November last all the men working in the more important mines, numbering 200,000 were federating to secure fair wages. Many of the mines were idle and prices of coals at the pit's mouth had advanced enormously. The proprietors were stubborn, but in view of the fact that the miners were federating, and that all of the collieries would soon be idle, they yielded, and 10 per cent. advance was granted. Suppose the 200,000 miners were receiving \$1.00 a day, ten cent advance would be \$20,000 a day, or for 300 days, \$6,000,000 such is the lesson taught by federation. Federation means the triumph of the right for workingman, and don't you forget it.

Railway Life commenting on the "Q." strike says: "Even viewed in the most favorable light this cannot be regarded as a victory for the men, but they have saved enough of what they contended for to keep up the faith of railway employés in labor organizations." * * * * * "And had the victory of the "Q." been complete, had the officials been able to run the road while completely ignoring, as they set out to do, the representatives of the great Brotherhoods, it would have weakened, none can say how much, the hold which these Brotherhoods have upon their members. This would have been disastrous to every interest of the continent, for it would have meant that for a long time hereafter railway employés must either sullenly endure whatever impositions managers sought to put upon them or do what they could singly or in small bands to better themselves." The view *Railway Life* takes of the strike, is that it was a drawn battle, in which neither party gained a victory, and in which both parties, while losing large sums of money, gained immensely in experience. *Railway Life* refers to the "self-control and self-respect shown by the men immediately engaged, and the loyalty of all their comrades to those who had to bear the brunt of the battle," and adds, "Considering the immense body of men vitally interested in the struggle and the intensity of the excitement which prevailed, the record is one of coolness, self-restraint and respect for the rights of others which an equal body of men in the so-called 'intellectual' class would never have shown." The Brotherhoods engaged in the struggle with the "Q." do not claim a victory, nor do they admit a defeat in all the term usually means. They came out of the struggle intact. They paid large sums of money for knowledge obtained, and among other things learned, that the only hope of success in future struggles against corporate power, lies in federation. Had federation been inaugurated, February 27, 1888, the strike would not have continued ten days, and the "Q." corporation would be to-day, at least \$10,000,000 better off, and only simple justice would have been secured by the men. What is now wanted is federation, and with this secured, strikes will disappear.

* * *

THE *Frog*, in its issue of February 1st, has an editorial article captioned "Drifting Apart" in which reference is made to the attitude of the B. of L. F. and the B. of L. E. towards each other. The article in question contains not a few wise and pertinent statements. It says that "The B. of L. E. have been educated into the belief that they are invincible. It is the greatest labor organization in existence to-day, but it would have been better off had its members been kept

ignorant of that fact. What the leaders want to do now, is to educate it right back out of this belief. Without the support of the B. of L. F. the B. of L. E. can do nothing. Every honest man will acknowledge this." It is to be hoped that the advice of the *Frog* will be taken, and that the "right back" education will begin at once. In this drifting apart business, the B. of L. F. has never engaged for an hour; on the contrary it has made constant and strenuous efforts in the other direction, but the B. of L. E. in every instance, has repelled the B. of L. F. and has given indubitable evidence that it did not desire any honorable alliance with the B. of L. F., as a consequence, the "drifting apart" has all been done by the B. of L. E. This the *Frog* sees clearly and remarks: "No paper, except of course, the official organ of the Brotherhood, will fight more fearlessly the battles of the engineers than will this journal. But while we demand justice for them we have a right to expect them to be just to others, and this they have not been. Not one of the four or five orders of railway employés can ever cope with capital single handed. There must be some kind of federation or coöperation of a different nature from that used by the B. of L. E. in the "Q." trouble." Manifestly, the pompous, self-sufficiency of the B. of L. E. is not in the line of success, and it ought, by this time, to see the mistake it is making, and in making the discovery, a great many level-headed engineers, are doing what they can to help it out of the sad consequences of its mistakes. The *Frog*, referring to the committee of nine, remarks, that "The hundreds of loyal firemen who had stepped down from their engines, with the engineers, were all forgotten; yes, worse than that, were ignored. This kind of treatment won't work always."

* * * * * "The great trouble is just this. If the engineers insist on building a barrier between the two Brotherhoods, the young men will refuse to withdraw from the firemen and the result will be the building up of the B. of L. F. at the expense of the B. of L. E." We fully coincide with the *Frog*, the treatment of the B. of L. F. by the B. of L. E. "won't work always," indeed, it won't work at all, from this time henceforth. Injustice, ostracism, contempt, have had their day. Henceforth, equality, in all that the word signifies in treatment, in the consideration of rights and prerogatives, or, go it alone.

The B. of L. F. will federate with other organizations of railway employés, and the B. of L. E. may choose its own policy and pursue it without let or hindrance. But if it should desire federation, a wise and prudent proceeding, it will have to get down from its stilts, for no other organization will climb up to receive its smiles or approbation.

THE COST OF MEMBERSHIP.

It is supreme folly to disguise the fact that firemen contemplating membership in the Brotherhood of Locomotive Firemen, do take into consideration the cost of membership. This is right. It is eminently prudent. Firemen know their income, provided they are not confronted with a request to consent to a reduction of wages. The great body of locomotive firemen are required to study economy. The lesson is up for debate every day of their lives. As a consequence, when they think favorably of joining our Order, they inquire, what does it cost?

To this inquiry there is no difficulty in giving a prompt reply. The cost is not excessive, in fact it is moderate, being all told inside of \$10.00. In this regard, economy has been considered. Having joined the Order, the new member is made acquainted with the laws relating to regular assessments provided for by the laws of the Order, and as they have been subjected to investigation, and are based upon well considered estimates, are made as low as possible. Hence, the question of reducing the cost of membership to the minimum point is not to be considered when discussing initiation fees or regular assessments. But the question of economy comes to the front and demands consideration when the expenses of Subordinate Lodges, apart from matters to which we have referred, demand approval or rejection. Subordinate Lodges are authorized to levy assessments. This may be done in a way to jeopardize the stability, indeed, the very existence of the Lodge. Hence in levying assessments for the use of Subordinate Lodges the study of economy becomes of the greatest importance, and the greatest care should be exercised. It is needless to say the danger is always in the line of excessive expenditures. With money in the treasury, schemes are constantly set on foot to spend it. Under such circumstances men are too apt to forget that heavy taxes is the prolific parent of dissatisfaction everywhere, and that low taxes and rigid economy, met with universal approval. A Subordinate Lodge, in levying an assessment, should first determine that the money is absolutely required to promote the welfare of the Lodge. This done, the assessment, as a general proposition, will meet with a hearty support. If it is not done, dissatisfaction arises, and members will say, "It costs too much to be a member of the Brotherhood," and as a result they will, in numerous instances, abandon the Order. Excessive assessments indicate loose finances, than which nothing is better calculated to breed disturbances and produce disintegration. Any intimation that the money of a Lodge is being squandered is fatal to the prosperity of the Lodge. On the other hand, when it is known that a Lodge levies assessments only, when the money

is absolutely required, and is to be expended with a strict regard for the welfare of the Lodge, there will be found unanimity of sentiment, harmonious action, lodge pride and ambition which invites new members and holds them when initiated.

We do not hesitate to believe that all the Subordinate Lodges of the Order will regard the present as a time for the retrenchment of expenses, thereby making the cost of membership as light as the welfare of the Lodge will permit. Sound financial legislation will be found to be wise. To levy assessments only, when imperative necessity requires the money, will, we think, insure prosperity and harmony. Economy silences faction and begets confidence. Then the verdict is, that the Brotherhood is worth more than its costs, and the future of the Order, freed from doubt and anxiety, becomes an assured triumph.

* * *

THIS *Magazine* long ago championed the movement to establish the eight-hour labor day for all toilers throughout the land. We find in a late issue of the *Chicago Knights of Labor* an article upon the subject from which we make the following extract:

On the 1st of May, 1890, the representatives of 587,000 workmen have said the eight-hour day shall be established. Fifteen months will elapse before the day arrives for the accomplishment of that beneficent object. In that time no effort should be spared to unify the forces of labor. Every man who works for wages has a lively interest in helping the movement. Every man who don't work for wages but who has children that may have to before they die is interested in making the movement a success. Every woman who has a husband and desires that he may have more leisure to devote to his family is interested in the successful accomplishment of the eight-hour day. Every capitalist who is interested in the welfare of the people is interested in bringing this movement to a successful issue with as little loss to the business interests of the country as possible. Every employer of labor who is interested in the welfare and happiness of his employees is interested in solving the problem of how the eight-hour day can be inaugurated with the least friction, but more especially a hundred fold more deeply are the wage workers of whatsoever craft or calling and their wives and children and their children's children interested in reducing the hours of labor to such an extent that all the idle may be employed, that every able-bodied man may have the opportunity to, may be compelled to earn their own living.

The eight-hour working day is coming if workingmen so decree, and we believe the decree will be issued May 1, 1890.

* * *

A WRITER in the *Forum* says that "since 1876 over 400 American railway companies, operating more than 35,000 miles of road, have become insolvent, and over \$2,000,000,000 of capital stock and indebtedness have been readjusted by foreclosure." There is nothing strange about the statement, as in a majority of instances, results were just what was designed when the road was built.

For the Magazine.

ADMONITION.

Do you you know that eighteen hundred and eighty-eight
Has passed the goal of eternity's gate?
And that eighteen hundred and eighty-nine
Is numbering days of yours and mine?
And soon our days on earth will be
Engulfed by vast eternity?

Are you daily preparing as time rolls on,
In traveling the road that others have gone,
To win for your soul at the end of life's race
A passport to heaven your Judge there to face;
And meet your Redeemer, by whose loving grace
The Father says, come, to the soul's resting place?

Or are you content with the joys of this life?
Succeeding in business, the maelstrom of strife
Where the mighty are loved, the weak are despised,
In the vortex of progress the frail are capsize
By the billows of might, regardless of right;
And the joys of the day are the sorrows of night.

For might may be wrong, but right shall be
might

In the day that will come when God sets aright
His accounts with all men for deeds done on
earth;

When the saved and the lost from sepulcher's
hearth

Shall come to be judged by God's rigid law,
Whose infinite justice exposes each flaw

Of a life that is spent in the merry-go-round
Of the world's wicked way, allured by the sound
Of temptation's trumpet, which catches the ear
Of young and old, from year unto year,
And leads them astray from heaven's pathway;
The way that was made for us mortals of clay.

By the sacrifice made upon Calvary's mount,
When Christ, the Redeemer, began the account
Of man's true redemption from Eden of old,
To the city Celestial whose gates are of gold;
And are open to all of the righteous who call
In the name of the Lord, both great and small.

H. J. Fachenthall.

PHILADELPHIA, January 30, 1889.

OUR BROTHERHOOD.

Since we have had charge of the *Firemen's Magazine*, it has been our pleasure to write, as occasion seemed to require, of our Brotherhood. We have not written too often nor have we exhausted the subject. We have written of our Brotherhood in such eulogistic terms as we could command, but when our task was done, like Sheba's Queen, in her exclamation of surprise and admiration upon beholding the riches and wisdom of Solomon, we have said, "the half was not told."

"Our Brotherhood" is an inspiring theme. We like it, and only regret that we do not wield a pen sufficiently graphic to do the subject justice. Our Brotherhood is not old. It is still in its "teens." It has not seen a score of years. It is in the heyday of its youth—in the morning of its hopes and ambitions, and yet, it has a history resplendent with noble deeds, high resolves, earnest endeavors and of victories achieved in the line of moral and intellectual advancement.

Who were the founders of our Brotherhood? Whose hand was it that

—Rounded Peter's dome,
And groined the aisles of Christian Rome.

Did it build "better than it knew?" Did

it work in "sad sincerity?" We say that the ten humble locomotive firemen, who, in 1873, at Port Jervis, N. Y., laid the foundation of our Brotherhood, did more for the world than did "the hand that rounded Peter's dome." They wrought in hopeful sincerity and "builted better than they knew." Were they ambitious men? If so, who of all the hosts that have "trod the ways of glory," "and sounded all the depths and shoals of fame," worked more in the interest of their fellow men? A generation has not passed since, at Port Jervis, our Brotherhood was born. Look at it now. It is grand in its sweep and jurisdiction. It has crossed the continent. You can count its Lodges from one to 400. You can count its membership from ten to 20,000, but you cannot count its noble deeds—of mercy and of benevolence. No one can ever know the griefs it has assuaged, nor the hopes it has inspired; these are recorded only in the book of God's remembrance. Our Brotherhood has a record of the dollars it has paid to disabled brothers, to widows and orphans, but it has no record of the tearful eyes it has dried, of the moanings it has hushed, of the darkened hours it has made bright by its ministry, nor has it a record of the prayers that have been offered for its prosperity and perpetuity. And yet, our Brotherhood is in its infancy. Is it a prodigy in growth? Does it challenge the admiration of beholders by the solidity of its foundation? Does it astonish those who contemplate the majesty of its march and influence? Verily. But its crowning glory, after all, is in the principles it advocates and in the dauntless courage it manifests, in adhering to convictions, and in the performance of deeds of benevolence.

Our Brotherhood is not a Brotherhood of arrogant self-conceit. It glories in the prosperity of other Brotherhoods. In the banqueting halls of its good will there is room enough for all. It envies no Brotherhood of the world's toilers the largest measure of success. Our Brotherhood has a friendly word and a friendly hand for all who are capable of appreciating proffered amenities. It is in alliance with the aristocracy which champions the eternal fitness of things. It wears its labor badges as proudly as a King ever wore a decoration or a coronation jewel. It appreciates the value of dollars, but it values honor, integrity and courage none the less, though found in the cottage where the poor man resides. Our Brotherhood adopts the philosophy of the immortal Burns, when he says:

"What tho' on hamely fare we dine,
Wear hoddin'-grey, and a' that;
Gie's fools their silks, and knaves their wine,
A man's a man for a' that;
For a' that and a' that,
The tinsel show, and a' that;
The honest man, though e'er sae poor,
Is king of men for a' that."

Our Brotherhood challenges the love and

reverence of its members. Its escutcheon is free from such blemishes as arrogance, hypocrisy and cowardice impose. It has been tried in battle and did not flinch. It has been weighed in the balance and was not found wanting. In its banqueting halls no skeleton hand ever appeared to write its doom.

Our Brotherhood, true to duty, in security and in danger, courageous in the battle and in the storm, contemplates its banner with ever increasing love and pride. This being true, why should those who have felt its protecting, fostering arms, desert it for any other Brotherhood? What has any other Brotherhood to offer as an inducement to apostatize? Does any other Brotherhood of railway employes, in beguiling cadence sing to the members of our Brotherhood the song of the "spider to the fly"? Is it true that members of any other Brotherhood of railway employes, dare, in the presence of any member of our Brotherhood, to use language of intimidation as a means of pros-lyting? The very mention of such degenerate tactics is enough to heat a locomotive fireman's blood, a member of our Brotherhood, until it boils. Is there a Brotherhood of railway employes that can hope to win members by means that should mantle every honest man's cheek with a blush of burning shame and indignation? these questions are up for debate, and must be settled. The time has arrived for the final determination. What shall it be?

We do not hesitate to say that the members of our Brotherhood will not apostatize to become members of any other Brotherhood whose laws affix upon them an insufferable stigma. To come to any other conclusion is to render judgment in advance that our Brotherhood has no mission on the earth but to be the tail of some other Brotherhood's kite, a modern incubator to hatch roosters to crow for others, a breeding-pen to rear and train "runners" whose exploits are to be credited to others, and that too, to those whose policy has been that of continuous insult and ostracism.

Was it for this humiliating drudgery that our Brotherhood was organized? Is it for this degradation that it has toiled in summer's heat and winter's cold? Is this the climax of its ambition and the realization of its hopes? We do not believe it. Our Brotherhood has a nobler mission, a higher destiny. It is deserving of better treatment, of a larger share of respect and consideration.

Let us come down to business. The Brotherhood of Locomotive Engineers wants to increase its membership by decreasing the membership of the Brotherhood of Locomotive Firemen. But it demands of the members of our Brotherhood as a prerequisite to membership in the B. of L. E. that they shall cleanse themselves of the

contaminating influence of their connection with the Brotherhood of Locomotive Firemen. Such a proposition is the climax of insult and insolence. It is a proposition embodying shame, humiliation, degeneracy, apostasy, treason and degradation.

The members of our Brotherhood are everywhere awakening to the infamy of the proposition. They are demanding full recognition of their Brotherhood. In this they are right. There should not be, there can be no compromise. Let the shibboleth words of our Brotherhood be, "Equality or Divorce." Let the resolve be as irrevocable as the laws of the Medes and Persians—never to become a member of the B. of L. E. until the laws designed to degrade members of our Brotherhood are repealed. This done, let hatchets be buried while the two great Brotherhoods march in parallel lines to accomplish their high destiny.

* * *

Electric Power, referring to the Sprague Electric road at Cleveland, Ohio, says, it has proved "a most brilliant success." During the month of January last, there was a snow storm throughout which "the cars on the horse railways were delayed, running behind the schedule time but no car on the electric road was delayed. Throughout the greater part of the day, the cars did double duty, by drawing a second car both crowded full, without difficulty. The citizens of Cleveland are enthusiastic over the success of the road, and President Everett has received a great many congratulations in regard to his electrical equipment." The electric railway is coming, in fact, several short lines have already arrived, but to what further extent electricity is to be used in propelling trains, it is too early to predict. Experimenting is going forward hopefully, and the time may come when firemen will be required to lay down the pick and the scoop.

* * *

STATISTICS are always interesting reading, provided they are correct, or approximately so, and the annual statements of several of the Fall River cotton manufacturing establishments are doubtless entertaining to the stockholders. During the past year the Wapamanoag mills, on an investment of \$750,000 earned for their owners, \$157,000, or more than 20 per cent. The Granite mills, with an investment of \$400,000, made for their owner \$136,000 or 34 per cent. The Sagamore mills, capitalized at \$600,000, made for their owners \$133,000, or more than 22 per cent. Such are the earnings of capital. One million seven hundred and fifty thousand dollars earned for the owners \$426,000 or more than 24 per cent. That is the way millionaires are made, but the raw material is not factory employes.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

MARCH, 1889.

OFFICE OF GRAND SECRETARY AND TREASURER, }
TERRE HAUTE, IND., March 1, 1889. }

Assessment Notice for March.

ASSESSMENT NO. 2—\$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled to all the benefits of the Order, viz.:

CLAIM No. 26. Harry Reynolds, of Welcome Lodge, No. 72, died of Typhoid Fever, September 26, 1888.

CLAIM No. 27. Joseph O'Loughlin, of River View Lodge, No. 330, was declared totally disabled with Chronic Dysentery, November 15, 1888.

CLAIM No. 28. Joseph Henry, of Acme Lodge, No. 223, died of Typhoid Fever, November 16, 1888.

CLAIM No. 29. G. H. Little, of Blooming Lodge, No. 40, died of Spinal Disease, November 18, 1888.

CLAIM No. 30. J. T. Gallagher, of Chicago Lodge, No. 95, was declared totally disabled with Consumption, November 24, 1888.

CLAIM No. 31. John M. Lee, of Midland Lodge, No. 147, died from the effects of an overdose of Laudanum, November 25, 1888.

CLAIM No. 32. J. C. Updike, of Bay State Lodge, No. 73, was declared totally disabled with Consumption, November 26, 1888.

CLAIM No. 33. D. L. Hartsell, of Marvin Hughitt Lodge, No. 132, was declared totally disabled with Spinal Disease, November 28, 1888.

CLAIM No. 34. Joseph Webber, of Pilot Lodge, No. 124, was declared totally disabled with Consumption, November 28, 1888.

CLAIM No. 35. D. A. Goodman, of Salt Lake Lodge, No. 178, was killed by Railroad Accident, November 29, 1888.

CLAIM No. 36. Michael Sherry, of Cataract Lodge, No. 302, was killed by a Railroad Accident, December 3, 1888.

CLAIM No. 37. J. J. Volkert, of Onoko Lodge, No. 211, was killed by Railroad Accident, December 3, 1888.

CLAIM No. 38. Alfred Michener, of United Lodge, No. 60, was declared totally disabled with Consumption, December 8, 1888.

CLAIM No. 39. N. W. Vawter, of C. J. Hepburn Lodge, No. 100, was declared totally disabled with Kidney Disease, December 10, 1888.

CLAIM No. 40. A. A. Buckley, of Just in Time Lodge, No. 149, died of Consumption, December 11, 1888.

CLAIM No. 41. M. F. Higgins, of Violet Lodge, No. 305, was declared totally disabled with Epilepsy, December 12, 1888.

CLAIM No. 42. Chas. Perdien, of Self Help Lodge, No. 80, was killed by Railroad Accident, December 14, 1888.

CLAIM No. 43. W. F. Barker, of Orphans' Hope Lodge, No. 819, was killed by Railroad Accident, December 22, 1888.

CLAIM No. 44. Michael Kirk, of Enterprise Lodge, No. 75, died of Epilepsy, December 30, 1888.

CLAIM No. 45. S. J. Francis, of Pilot Lodge, No. 124, was killed by Railroad Accident, December 31, 1888.

CLAIM No. 46. C. H. Colvin, of Rocky Mountain Lodge, No. 77, was declared totally disabled with Insanity, January 5, 1889.

CLAIM No. 47. John H. Shannon, of Fortune Lodge, No. 120, was declared totally disabled with Consumption, January 5, 1889.

CLAIM No. 48. John Donins, of Anchor Lodge, No. 54, was declared totally disabled with disease of Liver and Spleen, January 5, 1889.

CLAIM No. 49. Edwin Lillierap, of C. J. Hepburn Lodge, No. 100, was declared totally disabled with Heart Disease, January 10, 1889.

CLAIM No. 50. John Dunn, of Cerro Gordo Lodge, No. 29, was declared totally disabled with Paralysis, January 10, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls March 1st, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than March 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours, fraternally,

EUGENE V. DEBS, G. S. & T.

OFFICE OF GRAND SECRETARY AND TREASURER }
TERRE HAUTE, IND., March 1, 1889. }

Special Assessment No. 18.

\$3.00.

To Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified that Special Assessment No. 18, amounting to Three (\$3.00) DOLLARS, has been levied this day upon all members whose names appear upon the roll of membership March 1st, 1889, and must be paid to the Collector of your Lodge on or before April 1st, 1889, as provided in the laws governing the Protective Department.

Any member failing to make payment of the foregoing assessment, as above required, will stand expelled, and will be so reported to the Grand Lodge.

Collectors are required to deliver their state-

ments of this assessment to the Receiver, with the amount collected thereon, on or before April 2, 1889, and Receivers are required to forward the same so as to reach the Grand Lodge on or before April 10th, 1889.

Any Lodge failing or declining to make its returns as above required will be subject to the same penalties that are provided for the non-payment of beneficiary assessments.

Yours fraternally,
F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

OFFICE OF THE GRAND LODGE, B. OF L. F. }
TERRE HAUTE, IND., March 1, 1889. }

Special Notices.

To Subordinate Lodges:

DEAR SIRS AND BROTHERS:—Your attention is called to the following notices:

SPECIAL ASSESSMENT.

See notice elsewhere of Special Assessment No. 18, levied for the month of March, and payable on or before April 1st. Expulsion is the penalty for non-payment.

TO RECEIVERS.

Receivers in remitting money for the *Magazine* should invariably specify in their statements to what volume the money is to be credited. Without this specification confusion is inevitable.

TO ALL LODGE OFFICERS.

Examine the names and addresses of your officers in this issue of the *Magazine*. If any correction, alteration or other change is to be made, notify the Grand Secretary at once. This is necessary to insure the safe delivery of the mail.

LODGES LIABLE FOR DELINQUENTS.

Any member who does not hold a receipt for dues for quarter ending April 30, 1889, stands expelled and must be so reported to the Grand Lodge. Failing to make such report a Lodge is liable and will be required to pay the assessments of said members while their names appear on the Grand register. See section 53, page 20, of the Constitution.

OFFICIAL CIRCULARS.

Official Circular No. 13, very important, has been forwarded to each Lodge. Any Lodge having failed to receive it, should promptly notify the Grand Secretary and Treasurer. All official circulars issued by the Grand Lodge should be read in open meeting. This is not done, and in numerous instances we have had trouble because of this fact. We shall hereafter serve notice in the *Magazine* of all circulars that are issued, and if they are not read at Lodge meeting, the members will know who is at fault.

REMITTANCES.

Receivers frequently send money in bulk, by express. This is positively prohibited by law. All remittances must be made by *Bank Draft*, *Postoffice Money Order* or *Express Order*. No remittance should be made by Receivers for any purpose except when they make their regular returns, and the remittance should be invariably accompanied by the regular monthly statements (two in number) as provided by law.

Yours fraternally,
F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. & T.

Acknowledgments.

LEWISTOWN, PA., February 4, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—With feelings of gratitude I wish to acknowledge the receipt of \$1,500 due me on my disability claim. I also wish to return my sincere thanks to the members of Harrisburg Lodge, No. 174, who took such great interest in my welfare.

Yours fraternally,
MAC WERTZ.

NEODESHA, KAN., January 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS:—Allow me to say I have received through the officers of the Fall River Lodge, No. 336, of which my son was a devoted member, a draft for \$1,500.00, the amount of the policy held by my son, J. Q. McPaul. I wish to express my devoted thanks to the members of the Fall River Lodge and for the kindness shown in his sickness and death.

Very Respectfully,
MRS. M. J. MCPAUL.

EASTON, PA., January 26, 1889.

To the Ladies Aid No. 3, B. of L. F.:

I wish to express my thanks to the members of the Ladies Aid No. 3, B. of L. F. No. 11, for the beautiful floral tribute presented for my dear husband, and for the many kind acts especially do I desire to thank the sisters for the kind services rendered at the funeral. Sincerely hoping that no such affliction and sorrow will ever befall any of you, I remain a sister in the good work of the Order.

MRS. JESSE ROSEBERRY.

WASHINGTON, D. C., January 4, 1889.

To the Brotherhood of Locomotive Firemen:

I desire to return my sincere thanks for the payment of \$1,500.00, the insurance due me upon the policy of my son, Louis H. Kettler. I also wish to thank the officers and members of Anchor Lodge, No. 51, for their kind attention to us, and for the respect paid my son after his death. Wishing the noble Brotherhood a prosperous future, I remain, Yours truly,
MRS. WM. KETTLER.

EASTON, PA., January 26, 1889.

To the Members of Excelsior Lodge, No. 11, B. of L. F.:

GENTLEMEN:—I desire through the columns of the *Magazine* to express my sincere thanks to the B. of L. F. of Excelsior Lodge, No. 11, for their beautiful floral tribute and their many acts of kindness to my husband, Jesse Roseberry, through his long illness, and the respect shown him after death. Also, to members of other Lodges who called upon him and showed him acts of kindness. May the blessings of Heaven rest upon you, one and all, is the sincere wish of his widow.

MRS. JESSE ROSEBERRY.

THIBODAUX, LA., December 22, 1888.

To the Officers and Members of Endeavor Lodge, No. 267, Algiers, La.

GENTLEMEN:—I hereby acknowledge the receipt of a draft for fifteen hundred dollars (\$1,500), through Mr. B. Walters, amount of policy due my deceased son, L. C. Thompson. I also desire to return my sincere thanks for the prompt payment of the claim, and for the deep interest and sympathy shown in our loss and heavy bereavement, all of which will be gratefully remembered. May prosperity attend the entire Brotherhood is the sincere wish of

Yours truly,
MRS. E. A. THOMPSON.

NEODESHA, KAN., January 16, 1889.

To the Officers and Members of B. of L. F.:

DEAR SIRS:—I hereby acknowledge the receipt of a draft for \$1,500, the amount of insurance due me on the death of my husband, Richard B. Coble. I desire to return my sincere and heartfelt thanks to the Brotherhood for the money, and I also wish to express my appreciation of kindness and attention shown him after death. Words are inadequate to express the gratitude I feel toward your noble Order. I also tender my heartfelt thanks to the members of Lodge No. 51, also to the railroad officials who so kindly assisted us. With best wishes for the Brotherhood, I remain your sincere friend,

MRS. MOLLY COBLE.

OFFICE OF GRAND SECRETARY AND TREASURER, }
TERRE HAUTE, IND., February 1, 1888.

Beneficiary Statement.

To Subordinate Lodges:

SIBS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending January 31, 1888:

RECEIPTS.

Lodge Nos.	Back Assessm'ts.	Assessm't No. 27.	TOTAL.
1	\$78 00	\$65 00	\$141 00
2	176 00	155 00	331 00
3	55 00	41 00	96 00
4	95 00	92 00	187 00
5	57 00	50 00	107 00

Key to Alexander's Ready Reference

For Engineers and Firemen, giving the reasons why the instructions given in the *Ready Reference* should be followed.

This book is a *Valuable Accompaniment* to its predecessors, and contains nearly as much information as the *Ready Reference*, and a number of new items. Also a table showing the amount of time required to run from one mile up to one hundred miles.

It is now ready for issue.

The *New Edition of Ready Reference* has also a number of new items treating on Extended Smoke Boxes, Cylinder Lubricator, Broken Cylinder Heads, Broken Set Screws, Defects in Injectors and Pumps, also defects in Air Pumps and how to remedy them. Every item in either book is *easily understood by any person* who can read.

The Book contains a very handy *Time and Speed Table*, showing the amount of time required for running any speed from ten to sixty-five miles per hour and from one-tenth of a mile up to thirty miles. Some of the items have never before appeared in print. Three large diagrams of Engines, one complete diagram of Westinghouse Automatic and Air Brakes, with a full description of them and the manner of handling and repairing them when out of order; also a large diagram with description of Valve Motion accompanies each *Ready Reference*. A careful study and thorough understanding of the principal items of these books will qualify any good fireman for examination and promotion. Old Runners say there is nothing in print as suitable for *Locomotive Engineers and Firemen* or Round House men working on repairs of Locomotives. It is the result of forty years actual experience and study.

Price of *Ready Reference*, with Diagrams . . . \$1 00
Price, with Key bound in, and Diagrams . . . 1 50
Price of Key, without Diagrams . . . 50

Amount can be safely sent from any Post Office by Money Order, Postal Note or Registered Letter. Cash must accompany all orders. No Books sent C. O. D. Address, THEO. DEBS, Terre Haute, Ind.

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York.

308 Walnut St., Philadelphia

70 Kilby St., Boston.

36 Main St., Norfolk, Va.

1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1897 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

The Following Circular Speaks for Itself.

TO WATCH DEALERS.

OFFICE OF
ROBBINS & APPLETON,
104 State Street. CHICAGO.

Our attention having been called to the numerous complaints of watches becoming unreliable as time-keepers through *Magnetic and Electric influences*, and as the causes thereof increase with the introduction of *Electric Plants and Appliances*, some means of protection is necessary.

It has been demonstrated by experimental and practical tests that the

ANTI-MAGNETIC SHIELD

will protect a watch from the detrimental effects of *Magnetism*, and also has the effect of steadying its rate, thereby enabling all watches to produce a better average of time, we therefore recommend the *ANTI-MAGNETIC SHIELD* to all Dealers in *Waltham Watches*.

Some of the most imminent dangers which are destructive to the time-keeping qualities of a watch, and therefore should be provided against, in order to obtain the best results, are *Electric Railways, Dynamos, Electric Light Plants, Electric Motors, Magnetic Belts, The Application of Electricity in Medical Treatment, Electric Brakes on Railways, Locomotive Electric Headlights, Electric Lighting of Cars*, and other disturbing conditions, which are constantly arising when least expected.

MEN IN RAILROAD EMPLOY, where the most accurate time is required, and where the disturbing influences mentioned above are most seriously felt and aggravated by the peculiar condition of *Railway Service*, should exercise *wisdom*, and have their watches protected by the *ANTI-MAGNETIC SHIELD*.

Yours Respectfully,
By **ROBBINS & APPLETON**, General Agents. **AMERICAN WALTHAM WATCH CO.**

Anti-Magnetic Shield Cases for Sale by all Dealers.

Messrs. Giles, Bro. & Co.:

CLEVELAND, OHIO, July 22, 1887.

GENTLEMEN:—We are acquainted with the merits of the *GILES ANTI-MAGNETIC SHIELD* for watches, and believe it is a very valuable invention for protection of pocket time-pieces, and very desirable for railway service.

THE CHURCH AND THE WORK- INGMAN.

"A word fitly spoken is like apples of gold in pictures of silver."—*Proverbs.*

In the February number of the *Forum*, Rev. C. M. Morse has a paper captioned, "The Church and the Workingman." The paper contains many words fitly spoken and bravely spoken. The Rev. Mr. Morse, (may his tribe increase) like Abou Ben Adhem, loves his fellowman, and therefore loves God. Those who do not love their fellowman, but profess to love God are the most despicable hypocrites that the devil ever entertained with distinguished consideration.

Mr. Morse is one of the "cloth;" that he has been "called" to preach, will be admitted by those who read his courageous words, without debate. He talks as if his lips have been "touched with live coals from off the altar." "Fifty years ago," says Mr. Morse, "aristocratic pretensions were looked upon

as vagaries and treated with contempt. In the churches, people felt nothing of the chill of caste." This is all changed. Everywhere there is "rivalry in the erection of splendid edifices." "The poverty of the workingman is accentuated by comparison with the richness of the sanctuary." "The chief seats are lined with purple and fine linen." The church is full of pomp, pride and arrogance. "With the vast aggregation of wealth in the possession of the few and the increasing pressure of poverty in the homes of the many, the time is at hand," says Mr. Morse, "when there will exist between classes gulfs as impassible as between Dives and Lazarus." According to Rev. Mr. Morse's theory, the church, whose mission it is to bring Dives and Lazarus into sympathetic alliance, exerts an influence to deepen and broaden the gulf of separation. "Intensifying social struggles," says Mr. Morse, are working a transformation in the character of the church, as is manifest from the new terminology coming into general use, such as 'star preachers,' 'first-class churches,' 'wealthy congregations,' and 'our poor charges.' The adverse of this is found in the expressions of the workingmen: 'We can't dress well enough to go to church;' 'your leading members's don't notice us on the street;' 'your preachers run after the rich;' 'the preachers side against us in the matter of strikes.'" Evidently Rev. Mr. Morse knows what he is talking about. He sees clearly and speaks honestly.

The church is aristocratic. With more pride than piety the influence of the church, is to repel, not only workingmen, but all men who abhor shams. "The great human heart of the people" says Mr. Morse, "comprehends in some measure the fact that christianity is not a cement to hold a rich veneer to a body of inferior materials, but a furnace to fuse all elements into one homogeneous mass." But the church is not a furnace, it does not fuse; it is more like a refrigerator, it freezes. The "star preacher" is like the "star actor." The "first class church" from a religious point of view, is a first-class fraud. "Under present conditions," says Mr. Morse, "it is sheer folly to talk about the rich and the poor meeting together in the house of God, the poor decline the invitation." Why? Because the poor discover that the rich christians do not regard religion as a pledge of equality in the church nor "outside of the church." Mr. Morse says "the two great classes of our population, capitalists and workingmen, are separated by an irreconcilable antagonism in assault and defense of a system which, in the thought of the masses, is founded on injustice and denounced by God's word." The church arrays itself on the side of the capitalist. "The churches," says Mr. Morse, "maintain, at least by implication, that the great fortunes of the day are the fruit of legitimate industrial enterprise, and belong to their possessors as against the world," and that "poverty is due to laziness and inefficiency, waste, mismanagement, extravagance, injurious indulgence, and absence of a definite and resolute purpose to escape from poverty." Admitting that Mr. Morse states the facts in the case, what inducement does the church hold out for workingmen to look upon it with favor? It is in alliance with those who oppress them. In the sanctuary(?) which in numerous cases are merely club-houses, surrounded by every luxury wealth can procure—with a "star preacher" paid a bank president's salary—the monstrous iniquities practiced by the rich to grow richer and to make the poor poorer, receive no rebuke from the church. On the contrary, the church accounts for the wrongs by repeating the phrase, "the will of God." But, says Mr.

Morse: "The workingman does not believe it. Looking around upon the apparent disorder he replies, 'God would have done a better job!'" Says Mr. Morse, "Christ teaches the fatherhood of God and the brotherhood of man; why does His doctrine show so little income?" "To all these inquiries there is but one answer, the providence of God." "Providence, then," asserts the workingman has been overlooked, "and he turns to his labor organization for relief and sympathy." "In all his difficulties, and to all his better pleadings, the church returns decrepit generalities, and is earnest and definite only in defense of vested rights when threatened by labor agitation."

It is well for society that occasionally a man like Rev. C. M. Morse is found who has the courage to point out the mistakes of the church, and who has the capacity to comprehend the character, capabilities and services of workingmen. Society is never more deeply wronged than when injustice is done any one of its component parts, and though it should be asserted that the blow is aimed at the foot rather than at the head of the body social, the injury inflicted may not prove the less fatal, society has a right to appeal to the press, to the courts and to the church for justice in all matters affecting its welfare. If the influence of these acknowledged factors, in the progress of enlightenment become debauched, if, by any means whatever they are deflected from the shining pathways of truth, probity and high endeavor for the good of all, and are made to pander to base designs of cliques, society feels the wrong and realizes that there is treason in her camp and that calamities are to come. It may be said in extenuation for the press and the courts, that they are simply human, but the church, with its divine commission, the church with robed priests and sacred symbols, the church pleading its soul-saving mission in the earth, the church with its altars and shrines—the church, claiming the Eternal God as its founder and Christ Jesus, the son of God, as its head; the church with its sermons, prayers and communions; if the church goes wrong who is to set it right? The Rev. Mr. Morse does not hesitate to say the church has gone

wrong. It has planted itself on the side of the rich, and in opposition to the poor—and as a result, workingmen turn away from the church, from its pride and pomp, and seek for religious teaching elsewhere, turn to their ‘labor organizations for relief and sympathy.’ “The workingman,” says Rev. Mr. Morse, “believes that in the estimation of the church, gold, stocks, and bonds must be protected, while bodies, hearts and homes are left at the mercy of erratic economic principles. And when we remember Christ’s example and words, can we censure the workingman for the stand he has taken?” The idea that “star preachers” of “first-class churches” and “wealthy congregations” can be of any religious advantage to men, who say, “such preachers run after the rich,” is too preposterous to be entertained for an instant. They do not believe it. There are to be no second-class seats in God’s house, no second-class religious prescriptions to cure the sins of workingmen, while the members of “wealthy congregations” are to have their pills sugar-coated. The moment the church insults Jehovah by being a “respector of persons,” its glory departs. The church edifice may be built of diamonds—pulpits may be overlaid with gold. The theological seminary may turn out “star preachers” whose eloquent periods may ring like thunder peals—and the rich and the proud, the exclusive, may go in and worship (?) but under their influence hollow-heartedness will increase, rottenness and corruption will prevail in high places, and the church will stand forth as a whitened sepulcher. The Rev. Mr. Morse thinks that a “crisis has come—and that the church must continue to support the present order of things,” or “champion the cause of the poor and oppressed.” But workingmen are not going to wait to see what the church will do. They are able to take care of themselves, religiously and pecuniarily. If they want a preacher they can call a fisherman and the master will commission him.

The real significance of the paper of Rev. C. M. Morse is found in the fact that there are men in the church who have courage, and who dare tell the church that in its treatment of workingmen, its course is

neither honorable nor politic. Rev. Mr. Morse is clearly of the opinion that the churches need reforming, as at present managed they are accomplishing little good.

In view of all the facts, workingmen must have their own press—and this they have, and the number of papers devoted to their interests is increasing. There is to be no miraculous intervention in their behalf. With the ballot, and an intelligent comprehension of its power, the laws of the land, are in the near future to map out vivid lines by which courts are to be guided. The church will be the last to swing into line, but should it maintain its present attitude, as pointed out by Mr. Morse, it will be powerless to arrest the onward and upward march of workingmen. The age in which we live is iconoclastic. Images and shams must go. The votaries of jugglery are decreasing in number and power. If the churches are to take a position in the van of the advancing armies of progress, they must read and remember such wholesome advice as is found in the paper by Rev. C. M. Morse published in the February *Forum*.

THE B. of L. E. favors “strict neutrality,” which means a policy of severe, vigorous, stringent, stern, uncompromising indifference, unconcernedness, apathy, coldness—a sort of “you go to the devilishness.” Was that what the B. of L. E. meant when, during the C. B. & Q. strike, it appealed to the switchmen, “Help us or we sink.” Suppose the switchmen had replied, “We favor strict neutrality, and you may sink for aught we care.” That is the way the B. of L. E. now turns upon the switchmen, and this is their compensation for a heroic endeavor to help the engineers. The brakemen knew their men, and could not be pulled into the struggle on promises they knew too well would be broken. The switchmen now know the full meaning of “strict neutrality,” and they know from experience what mean ingratitude means. But the mills of the gods grind on.

CHINATOWN in San Francisco embraces twelve solid blocks with a heathen population of 30,000, and the number of manufacturers exceeds 12,000.

THE PUBLIC DOMAIN.

Henry George in his great work, entitled "Progress and Poverty," discusses the "Land Question" in a way which, naturally, we think, leads to an inquiry relating to the land area of the United States—but more particularly to the area of the "Public domain." It may be well to say, just here, that the national domain, means the total area, land and water, embraced within the boundaries of the United States, amounting to about 4,000,000 square miles, the land surface of which is estimated at 3,586,006 square miles or, 2,295,043,340 acres. In these estimates Alaska and its islands are included, the area of which is 577,390 square miles or 369,529,600 acres, and which being deducted, leaves the area of the United States at 3,422,610 square miles or, 1,925,513,740 acres.

The public domain embraces lands known in the United States as "public lands," lying in certain States and Territories, known as the "Land States and Territories," and was acquired by the Government of the United States by treaty, conquest, cession by states and purchase, and is disposed of under and by authority of the National Government.

In the year 1803, the public domain of the United States, by virtue of cession made by the States of New York, Virginia, Massachusetts, Connecticut, South Carolina, North Carolina and Georgia, consisted of 404,955 square miles or, 259,171,787 acres.

Having shown the extent of the public domain in the year 1803, it will be interesting to note subsequent acquisitions.

The first was the purchase of Louisiana from France, which took place in 1803. This purchase included portions of the states of Alabama and Mississippi south of the 31st parallel—the entire surface of Louisiana, Arkansas, Missouri, Iowa, Nebraska and Oregon. All of Minnesota west of the Missouri river, all of Kansas except a small portion west of the 100th meridian and south of the Arkansas river, all of Dakota, Montana, Idaho, Washington and Indian Territories, with a part of Wyoming and Colorado.

The cost, according to the original treaty stipulations, was 60,000,000 francs or \$15,000,000 in money and stocks. The interest on the stocks to the time of redemption was

\$8,529,353. The United States assumed the payment of certain claims of citizens of the United States against France, \$3,738,268, making a total expenditure of \$27,267,621. For this sum the Government obtained a title to 1,182,752 square miles of territory or 756,961,280 acres of land, at 3½ cents per acre.

The next acquisition to the public domain—1819, was the purchase of Florida from Spain, for the sum of \$5,000,000. For this amount stocks were issued, and principle and interest amounted to \$6,489,768. This purchase added to the public domain 59,267 square miles or 37,931,520 acres, which cost 17½ cents per acre.

The next acquisition to the public domain was from Mexico in 1848. By this session the United States obtained the States of California, Nevada and a part of Colorado, also the lands in the territories of Utah, Arizona and New Mexico, which added 522,568 square miles, or 334,443,520 acres to the public domain, at a cost of \$15,000,000 or 4½ cents per acre.

In 1850 the United States purchased of the state of Texas, 96,707 square miles or 61,892,480 acres for the sum of \$16,000,000 or 25½ cents per acre. This territory is now included in Kansas, Colorado and New Mexico, and embraces the "public land strip" or "No Man's Land."

In 1853 the Government purchased of Mexico 45,535 square miles of territory or 29,142,400 acres for the sum of \$10,000,000. This territory is known as the Mesella Valley, and lies in the territories of New Mexico and Arizona, and cost 34½ cents per acre. To recapitulate, we have public domain and cost as follows:

How Obtained.	Square Miles.	Acres.	Cost.
Cessions by States	414,955	259,171,787	
From France	1,182,752	756,961,280	\$27,267,621
From Spain	59,268	37,931,520	6,489,768
From Mexico	522,568	334,443,520	15,000,000
From Texas	96,707	61,892,480	16,000,000
From Mexico	45,535	29,142,400	10,000,000

In the foregoing Alaska is not included, because it is absolutely a *terra incognita* and cuts no figure in the discussion of the public domain, whatever may be said of it in its

relations to the national domain. The land laws of the United States do not extend to Alaska, and in the discussion of the land question, it would simplify matters greatly if the Land Department at Washington would leave Alaska out of the calculation, as for instance in a public document issued by the Land Department, we find the statement in 1883, the unsurveyed public lands amounted to 928,426,577 acres. In this is included 369,529,600 acres, the total area of Alaska, a country in which there are no land laws. Deducting Alaska and we find the unsurveyed lands of the United States to be 558,896,977 acres. At that date, 1883, there were in the United States, 254,624,133 acres of public land surveyed and unsold, this with the lands unsurveyed, made a grand total of 813,521,110 acres of land still to be disposed of by the government, sufficient for 5,084,507 farms of 160 acres each.

According to the census of 1880, there were in the United States at that time 4,008,907 farms, embracing 536,081,835 acres, an average of about 133 acres to the farm. Of these there were:

1,352 farms under 3 acres.
134,889 farms of 3 acres and under 10 acres.
254,749 farms of 10 acres and under 20 acres.
781,470 farms of 20 acres and under 50 acres.
1,032,910 farms of 50 acres and under 100 acres.
1,495,983 farms of 100 acres and under 500 acres.
75,972 farms of 500 acres and under 1,000 acres.
28,578 farms of 1,000 acres and over.

It will be observed that 2,208,374 farms in the United States in 1880, were under 100 acres, and that 1,695,983 farms ranged from 100 to 500 acres, taking in the 120, 160, 200, 240, 280, 320 acres and so on, according as a man may have added a 40 or an 80 acre lot to his farm. By far the largest proportion of them being between 120 and 160 acre farms, leaving only 104,550 farms above 500 acres. The value of farms in the United States in 1880 was \$10,197,096,776, or an average of \$2,543 per farm, or about \$18.20 per acre, including improvements, buildings, fences, etc.

It is interesting to note the rapid increase in the number of farms in the United States. In 1850 there were in the United States 1,449,073, in 1860 there were 2,044,077, an increase of 575,804, or about 41 per cent. In 1870 there were 2,659,985 farms, showing an increase for 1860 to 1870 of 615,918 farms or about 30 per

cent. In 1880 there were 4,008,907 farms, an increase between 1870 and 1880 of 1,348,922 or over 50 per cent—and from 1850 to 1880—thirty years, the increase in the number of farms has been 2,559,834, or about 140 per cent. Assuming that the number of farms between 1880 and 1888 has gone forward, as between 1870 and 1880, there would now be in the United States 5,089,043 farms, embracing 676,842,719 acres, against 536,081,835 acres in 1880.

So far as the Government is concerned, the public domain business has not paid expenses. Up to 1880 the account stood as follows:

Expenditures	\$322,049,595 96
Receipts	200,702,849 11
In excess of receipts	\$121,346,746 85

AN exchange says there are three epochs in railroad building. The first is when everybody wants the road, which is designated as the formation epoch. It involves subscription of stock, getting right of way, etc. The second is the construction epoch. During these two epochs there is great enthusiasm along the line of the road, everybody is hopeful and happy. The third epoch is when the road is completed and trains begin to run. This third and last epoch is an "eye-opener." It is productive of many and astonishing revelations. The first train is everywhere received with ovations and for a time the people imagine that every promise is fulfilled and every expectation realized. But after a while it is discovered that the towns staked off do not grow as rapidly as was contemplated. Then comes the discovery, says the writer, "that the railroad is not a purely philanthropic enterprise," and as a consequence hostile feelings arise. Free passes are not sufficiently numerous and those who are left out complain—and the road not being able to run on business principles, goes into bankruptcy, a receiver is appointed. Shippers purchase the property for a song and a good many people who subscribed in the beginning, during the first epoch, and felt happy under the second epoch, find the third epoch a sort of a depot for old stocks and damaged expectations, a penalty, perhaps, upon ignorance of correct methods of operating railroads.

THE AGE OF MENDACITY.

"Let falsehood be a stranger to thy lips.
Shame on the policy that first began
To tamper with the heart to hide its thoughts!
And doubly shame on that inglorious tongue
That sold its honesty and told a lie."

A writer in the *North American Review*, signing himself Howard Palin, and choosing for his subject, "The Age of Mendacity," professes to have made some startling discoveries, and starts out as follows:

It is easily susceptible of proof that there is today far more lying and misrepresentation of what we may term a professional type than there has ever been before. If figures are demanded it is only necessary to glance at any of the daily journals, run the eye casually, as it were, over the columns, note the number of easily detected falsehoods therein contained and multiply by the total alleged circulation as given in the sworn statement at the head of the day's issue. More than this, if each paper is read by several different persons it is fair still farther to increase the estimate, for a lie is surely a lie every time it is repeated. Thus by a very simple arithmetical process it is possible to show that millions of falsehoods—clad in all the authority that printer's ink still carries for many minds—are sent out daily upon their mission to distort the truth, if not directly to promulgate actual falsehood.

If Mr. Palin states the case fairly, if he has not himself stated a falsehood, if he himself is not a liar, then, indeed, is the United States of America the most unfortunate country known to men or angels.

The daily journals of the country are the great educators of the people. We doubt if it be possible to over estimate the power, the influence, of the daily newspapers of the country, and if they are all engaged in publishing lies, or distorting the truth, which is lying, then to say that the devil is in the ascendancy in the United States by a large majority, will be accepted as the situation by thinking men generally. But is it to be presumed that only daily newspapers are engaged in lying? Why should the weekly, semi-weekly, tri-weekly, monthly, semi-monthly and quarterly publications be excepted? There is no valid reason for such exception. Mr. Howard Palin should include them all except, possibly, the religious and scientific publications, and possibly, those engaged in promoting educational, agricultural and labor enterprises. The men who control the daily papers are not more corrupt, not more mendacious, not less regardful for the truth than are the men who publish papers less frequently. If this be simple justice to all parties, and publishers of newspapers and periodicals are alike

guilty of publishing lies, what words in the lexicons of the times are equal to the task of adequately portraying the deep degradation to which the nation is tending? If Mr. Palin is correct in the charge he makes, what force is there in the world that can arrest the degrading work of the untold millions of lies the press is publishing? Manifestly, mere words will not meet the requirement. Mr. Palin suggests figures. He would have the "easily detected falsehoods" multiplied by the "total alleged circulation," and multiplied again by the number of persons who read newspapers, for he says "a lie is surely a lie every time it is repeated." In this we have a basis for estimates. We are required to refer to the census figures of 1880. We shall deal only with the daily and weekly papers, and shall assume that as between 1880 and 1889 the increase of papers and circulation was 25 per cent. Those who choose may refer to the figures. They will find that in 1888, the total circulation of the daily papers amounted to, allowing 300 days to the year, 1,364,034,000 copies, and the weeklies to 1,264,256,768 copies, a total number of copies of 2,628,290,968. Mr. Palin says it is only necessary to "glance at any of the daily papers, casually, as it were," and "note the number of easily detected falsehoods." Now, suppose we put the number of "easily detected falsehoods" in each issue at five, then we would have annually set afloat the astounding number of 13,140,454,840 falsehoods, lies. But, Mr. Palin contends that a lie is a separate and distinct lie every time it is uttered, and to have a correct idea of the number of lies uttered by the press we should know how many persons read them. He says, "if each paper is read by several different persons, it is fair to still further increase the estimate, for a lie is a lie every time it is repeated" or read. That is to say, if five persons read the same lie, it is equal to five lies, hence, if each paper contains five lies, 13,140,454,840 lies are annually uttered by the newspapers of the country, and if each paper is read by five persons, it is equivalent to setting afloat 65,702,274,200, equal to 180,000,000 lies daily, including Sunday, and to 930 lies per capita daily of population, including men, women and children. Such is Mr. Howard Palin's

statement reduced to figures, based upon data approximately correct. It would not be proper to charge Mr. Howard Palin with intentional mendacity, it might not be "parliamentary," and yet, we assume that since the date of the publication of the first newspaper, no more mendacious statement than that made by Mr. Howard Palin, ever appeared in print. If it were true, then the Creator should cancel his covenant with Noah, take down his bow from the cloud, and drown the world again, for anything is better than a deluge of lies, the unrebuked and unbounded sway of the devil. If the press, to the extent charged by Mr. Palin, is engaged in lying, in polluting the minds of men, women and children, in defiling all things virtuous, in propogating wickedness, then the plagues of Egypt, fact or fable, dwindle to insignificance in comparison to the curse the press of the United States, is inflicting upon the country.

Mr. Palin is not content with arraigning the newspapers—the "daily journals" of the country. With the press he includes the lawyers, and says: "The journalistic liar is not the only profession of his class—side by side with him stands the lawyer, and it is by no means certain that the latter should not take precedence when it comes to down-right scientific work. His training from the very outset contemplates the defense of clients known to be in the wrong; contemplates in other words the suppression of the truth and the promulgation of deliberate falsehoods in open court with the avowed intention of misleading the jury. Thus it appears, according to Mr. Howard Palin's estimate, that journalists and lawyers are professional liars, the lawyer being, if possible, the greatest offender against human and divine law. In 1880 there were in the United States 64,137 lawyers. The increase in ten years, from 1870, was about 20,000; taking the same ratio of increase since 1880, it is fair to estimate the number of lawyers now in the country, at 90,000. This large army of lawyers, if we are to accept Mr. Palin's estimate, is constantly engaged in open court in the nefarious business of promulgating "deliberate falsehoods" in the interest of crime. But Mr. Howard Palin's statement is not true, it is not ap-

proximately true; on the contrary it is a stupendous falsehood, a monstrous slander. The trouble with the press is not that it lies, but that it tells too much truth. In numerous instances it panders to a demand for vulgar, debasing, vicious news, publishes truths that need not and ought not to be published, and thus feeds a depraved appetite. There are doubtless publishers of newspapers who are liars, and lawyers who would not hesitate to lie for a fee, but the sweeping declarations of Mr. Palin are in the extreme calumnious, and it is surprising, considering the standing of the publication which published them, that their author has not been properly rebuked by the parties slandered.

The workingmen of the United States have had great occasion for feelings of unkindness towards many publishers of daily and weekly newspapers, for what they have rightfully regarded as unfair treatment, but this course of injustice has not been pursued by all newspapers, nor yet by a majority of them, and even those which have taken a course well calculated to prejudice the public against the rights and interests of workingmen, have not been defamed as liars.

Lawyers are not professional liars, and it would be difficult to perpetrate a more astounding calumny. They do not lie in "open court." They can make no statement of fact to a jury not warranted by the testimony, and under the immediate eye of the court, they are not permitted, even were they disposed to do so, to distort facts. But we are not required to champion lawyers, nor yet the daily press, and what we say upon the subject of Mr. Howard Palin's villification of newspapers and lawyers, is prompted solely by a desire to contribute our share towards rebuking the vilest aspersion of two honorable and useful professions, that has appeared in print within the past quarter of a century.

THE Wicks tunnel on the Montana Central railroad is 6,200 feet long and cost \$1,500,000. It is through solid rock and required sixteen months steady work. It required twelve minutes for the first train to pass through the tunnel, but it is expected to reduce the time to eight minutes.

THE BROTHERHOOD OF LOCOMOTIVE ENGINEMEN.

It was the theory of Sidney Smith, that "of *individuals* living at the same period, the oldest has, of course, the greatest experience; but among *generations* of men, the reverse of this is true. Those who came first (our ancestors) are the young people, and have the least experience. We have added to their experience the experience of many centuries; and, therefore, as far as experience goes, are wiser, and more capable of forming an opinion than they were." It is not to be presumed that in the matter of wisdom, intellectual force, that former generations suffer by comparison with succeeding generations, but as generations have succeeded generations, new problems have demanded solution, and for their mastery not only the wisdom of the past has been required, but such additions as the generation called upon to expound the question, could supply.

Again, every generation, has had its special needs, or, to extend the periods, every century has had its demands to meet the requirements of an advancing civilization. It may be there are men of to-day who can provide things required for to-morrow—but it must be confessed that only in rare instances did the men of the 18th century make provisions for the men of the 19th century—indeed, the men of the year 1800, saw dimly, if at all—the wants of men a quarter of a century later—and they did not see even in their dreams the needs of the world in 1889. The men of the 19th century, who have reached the age of "three-score-and-ten," if age is to be measured by knowledge, are not only older than Methuselah, but have lived longer than from the creation of man to the deluge, and no violence would be done to language, if a dozen centuries were superadded.

And what of such propositions? Simply this, men are only required, when they act, to respond to present exigencies, the pressing necessity of the times—the best, considering the rapid march of events, the men of to day will do if they but lay foundations upon which the men of to-morrow may build with safety.

The men, who, in 1873 laid the founda-

tion of the Brotherhood of Locomotive Firemen, were endowed with as much prescience as usually falls to the lot of mortals—and the proof is found in the fact, that while changes required by phenomenal growth and expansion, have been made, the fundamental principles and ideas remain unchanged. And now the question arises, is there not a demand for a new departure in the Brotherhood of Locomotive Firemen? Not a new departure in principle or policy, but rather the application of the inherent principles upon which the Brotherhood was founded to exigencies which now confront the Order on every hand.

The *Magazine* assumes that the title of our Order is defective in that it does not convey to the mind a just comprehension of the status of its membership, in other words, the Brotherhood of Locomotive Firemen, has a far greater sweep than its name implies. This has been true during the entire period of its existence, and it has been fruitful of harm, while it cannot be credited with a single benefit. Say what we will, there is something in a name, far more than is usually admitted, at any rate, it must be regarded as universally wise and prudent, that the name of our Brotherhood should express, as far as practicable, the purposes of its mission.

The title of our Brotherhood is that of "Locomotive Firemen." The title is defective, because it is not sufficiently, nor justly comprehensive. It is less than the facts require. Let us see. Who are members of the Brotherhood of Locomotive Firemen? 1st, firemen; 2d, hostlers; 3d, engineers. A hostler is not a fireman, nor yet an engineer. An engineer is not a fireman, and yet, the membership of the Order includes them all. Hence, the *Magazine* is fully warranted in saying the name of our Brotherhood conveys a meaning far less than is warranted by the callings of its membership.

This defect, existing since the foundation of the Order, should be eliminated—and the name of the Order should express its true character. What is it? It is as it stands to-day, and as it has ever stood, a Brotherhood of Locomotive Enginemen. Necessarily so, because its membership, as we have stated,

includes firemen, hostlers and engineers, all enginemen.

This *Magazine* does not hesitate to suggest the eminent wisdom of changing the name of the Brotherhood from that of Locomotive Firemen, to that of the Brotherhood of Locomotive Enginemen.

The *Magazine* does not make the suggestion because of any sentiment of pride, but because the change is one of absolute propriety. "Locomotive Firemen," as applied to our Brotherhood, is a *misnomer*. It is an inapplicable title, because it is not only less than the facts demand, but is on its face a misstatement of facts. Our Brotherhood is larger, more comprehensive than its name indicates, and the character of its membership suggests and demands the change which the *Magazine* announces for the consideration of the membership of the Order.

The question arises what objections can be urged against the proposed change of the name of our Brotherhood? It will involve no change of laws or policy; simply that of title, and that in strict consonance with existing conditions of membership, about which there is no room for controversy. A fireman is an engineman; a hostler is an engineman; an engineer is an engineman. If the name of the Order should be changed to that of the "Brotherhood of Locomotive Enginemen," it would designate a fact, while that of "Locomotive Firemen" is less than the fact.

Is it to be surmised that an objection is likely to be found in the suggestion, that a member of the "Brotherhood of Locomotive Enginemen," would desire to join another Order, that he might have a larger insurance policy? Such an objection is easily answered by saying, that the parent Order could easily accommodate a member who desired a \$3,000 policy instead of one for \$1,500, since, if he desired to double his policy he would pay a double assessment. Upon the principle that a \$3,000 policy would require him to pay twice as much as a \$1,500 policy.

Is it suggested, that there are those who fondly cherish an old name for its associations, and would therefore object to a change. The *Magazine* would not treat lightly such an exception. It too, cherishes old names,

old associations, old friends, books and letters. But the *Magazine* would call a thing by its right name. The Brotherhood of Locomotive Firemen is more than its name imports; it is larger, broader, wider, more capacious. It is a "Brotherhood of Enginemen," and as such, it should bear a title in honest consonance with the facts.

NEGLIGENCE.

The decisions of courts in cases where railroad employes sue a railroad corporation for injuries sustained in the performance of their duties, bring into great prominence the question of "negligence," as will be seen by the following reports of decisions:

In Virginia in an action by an employé injured while uncoupling a car from some stationary cars, by the running of a coal train and pier engine into such cars, there was evidence that, when plaintiff went in between such cars, he saw such engine stalled on the up grade, and that there was at that time only about twenty feet between such stationary cars and the train, that he was delayed in his work by a tight coupling pin; that the train gave no warning by bell or whistle; that the escape of steam, as the engine climbed the grade, could be heard a long distance. The Supreme Court of Appeals holds that the plaintiffs' negligence was the cause of the injury, and he cannot recover,

Few words in the English language have a wider range of synonyms than negligence—and philologists have, therefore, devoted special attention to the term. In reading the Virginia case, the question arises in what regard was the employé whose duty it was to uncouple the cars negligent? A duty had to be performed; the employé was at his post and promptly attended to his duty. In this, there was neither disregard, inattention nor neglect.

The court in rendering the decision committed a grave error, since it is clear that the employé was not negligent. He was not inattentive. He could not be charged either with disregard or omission. He was watchful and prompt, and still the court held that his negligence was fatal to his claim. The employé when he went between the cars saw an engine stalled on an up grade and only 20 feet distant.

Ordinarily there was plenty of time to uncouple the cars, but a "tight coupling-pin" caused delay, and this delay resulted in disaster. In all of this there was neither negligence nor the semblance of negligence; the tight coupling-pin, of which the employé knew nothing, and could have known

nothing, occasioned the calamity, not negligence. And we doubt very much if the learned (?) judge could, if required, define the word negligence. The employé was not heedless, he saw the "stalled engine" on an up grade. He was not careless in manner nor method in the performance of his duty, on the contrary, he was thoughtful, considerate and deliberate, but found a tight coupling-pin, was delayed in the performance of his duty as an employé, in which he was injured, and being charged with negligence, was denied by the court, just compensation. When such decisions are made predicated upon negligence when there was no negligence, but on the contrary a prompt response to duty, there ought to be some way for a maimed employé to have his case tried upon its merits and by a judge who is capable of defining the term "negligence." Here is another Virginia decision:

In the same state while the brakeman, who was a minor, and upon his first trip, was coupling freight cars by order of the conductor, the conductor was so situated and so far away that he could not see the opening between the cars, nor the brakeman; so as to give the proper signals to slow up. The brakeman was killed by the cars coming together with great force. The Supreme Court rules that negligence is proved on the part of the conductor, for which the company is liable.

The one gratifying thing in regard to the foregoing decision, is that the court did not hold, that the brakeman, having been killed by the negligence of a coemployé, the railway was not liable for damages. The coemployé rot, has, we hope, been largely played out, and that we are to hear less of it in the future, since it is difficult to conceive of anything more exasperatingly unjust.

MAINTAINING RATES.

The New York *Standard*, in its issue of February 2d, says that "the bankers and the railroad Presidents have laid their heads together and determined that a new leaf shall be turned over in railway management. Hereafter there are to be no wars of rates, and everything is to be done in the interests of the stockholders. The country is to be divided up among the different systems; rates are to be fixed at such figures as the traffic will bear; and no system is to come poaching upon any other system's territory. What will happen to it if it does, would be pretty hard to say; it is assumed that the

dread of provoking chaos will be sufficiently strong to induce the various Presidents to stick to their agreement. Unquestionably, it is a good thing for the commerce of the country that rate wars should cease entirely. When rates between New York and San Francisco are, one month, less than between New York and Syracuse, and the next month as high as ever, the effect upon trade cannot but be evil. But it is, to say the least, very questionable if the true remedy is to be found in the practical consolidation of all the railways into one gigantic trust and the doing away with competition altogether. Anarchy is a dreadful thing, no doubt; but the absolutism that takes the place of anarchy is, if anything, the more to be dreaded of the two." It will be observed, if the purpose be to maintain rates, railroad corporations at once see the importance of federation, consolidation, unity of action, alone, single handed, they are powerless, federated they are all powerful. Could there be a more apt illustration of the wisdom of federation on the part of railroad employés to obtain and maintain fair wages? To obtain and maintain fair dealing in all things pertaining to employment is of as much importance as to obtain and maintain fair rates for freight and passengers. And who will deny, if railroad corporations deem it expedient to form an alliance to maintain rates, that it is equally advisable, and as desirable for the Brotherhoods of railway employés to federate to secure and maintain fair wages? The railroads want fair pay for the services they render; the same is true of their employés. To secure their rights the railroads federate, and in so doing set an example to the Brotherhoods of railway employés that ought not to be disregarded.

The New York *Dispatch* plumes itself upon taking "a broad view of the vast field wherein lie the best interests of all railroad men." In its broad view it would have members of the O. R. C. reduced to scabs and it would have members of the B. of L. E., because "paid double," hold themselves "one degree" above the members of the B. of L. F. The breadth of such views may be wondrous but they are incalculably thin. They embellish folly as moonshine does a mud hole.

PERSONAL VS. PRINCIPLE.

The course the *Firemen's Magazine* has deemed it proper to pursue of late, in defense of the honor of the Brotherhood of Locomotive Firemen, has, as we anticipated would be the case, created not a little agitation in the minds of certain persons who favor placidity and deprecate disturbance under all circumstances. Such people desire "peace at any price" or sacrifice, provided the commotion is the result of their own arraignment for acts done or indorsed, whereby wrong and injustice is done to others.

This *Magazine* is in no mood to make apologies. Satisfied that its manner of proceeding, relating to the policy of the B. of L. E., was demanded by every consideration of propriety, it does not relax in any degree its determination to proceed as it has begun. This *Magazine*, however, regards it proper to address a few words to a certain class, not members of our Order, who are, seemingly, disqualified to make a distinction between persons and principles, or persons and policy. That is to say, if the *Magazine* censures a policy, they will understand it as declaiming against persons. Let us be frank in this matter. The B. of L. E. has chosen to enact laws, which, viewed from any and from every standpoint, are grossly insulting to the B. of L. F. The laws disclose a deliberate purpose on the part of the B. of L. E. to do cruel violence to friendship and fellowship. They are laws which cast odium upon members of the B. of L. F. About this there is no mistake, no chance for misapprehension. The insult is sharply defined, is brought into bold relief. No one attempts to palliate the affront, the intended indignity. The B. of L. E. enacted at San Francisco that no engineer, a member of the B. of L. E., and a member of the B. of L. F., should ever represent his Division in a convention of the B. of L. E. Such a humiliation defies exaggeration. It was an insult of the most offensive character and unparalleled. It said, in effect, to members of the B. of L. F., who were members of the B. of L. E., "You cannot be trusted. You are wanting in honor;" and while thus stigmatizing the men, it intimates a gratuitous calumny upon

the B. of L. F. It was, in effect, slanderous. It defamed the B. of L. F. Not being satisfied with this aspersion of the B. of L. F., at New Orleans the B. of L. E. enacted that no engineer, a member of the B. of L. F., should from that time ever become a member of the B. of L. E. This was the climax—it was ostracism pure and simple. It was an expression of utter detestation of the B. of L. F. And now comes what upon any and every process of ordinary reasoning is inexplicable. The B. of L. F., after all of this insult, contumelious and opprobrious treatment, the rank and file of its membership and its grand officers still tried to cultivate amicable and honorable relations with the B. of L. E., and that there might be no controversy in that regard, stood by the engineers on the C., B. & Q., through all that fierce storm, making sacrifices, which, regardless of defeat, baptized the men and the Brotherhood with fadeless renown. Still, the B. of L. E., at Richmond, not yet satisfied with its insulting policy, goes ahead and appoints a committee to settle the strike and as completely ignores the B. of L. F. as if it were not in existence.

The *Magazine* took it upon itself to expose this shameful policy of the B. of L. E., but in doing this it makes no war upon individual engineers. It fights a vicious policy. It exposes a course of action that no member of the B. of L. E. publicly champions. The *Engineers' Journal* is as silent as a tombstone. What is said in opposition to the course taken by this *Magazine* may be justly condensed into this one sentence: "You are creating bad feelings." No one assails the justice of the *Magazine's* criticisms. No one pretends to justify the course pursued by the B. of L. E. towards the B. of L. F. No one can justify the policy of the B. of L. E. "Bad feelings," indeed! When the B. of L. E., at San Francisco, passed its odious law, the "bad feeling" began. Prior to this there was no "bad feeling," there was harmony, fraternity, fellowship. But when the B. of L. E. said no member of the B. of L. F. and a member of the B. of L. E. should ever represent his Division in a B. of L. E. convention, a "bad feeling" was engendered, and when at New Orleans a further indignity was offered the

B. of L. F., the bad feeling was intensified, and when at Richmond these odious laws were re-indorsed, and another insult offered the B. of L. F., the resentment of the B. of L. F. could not be further restrained. Every consideration of honor and self-respect demanded that the B. of L. F. should assert its dignity and independence, and this the *Firemen's Magazine* has done to the best of its ability. It is not responsible for the existence of "bad feeling." With all the power the B. of L. F. could command it sought to restore amicable relations, but every proposition was arrogantly repelled. Let the responsibility rest where it belongs. It does not rest upon the *Firemen's Magazine*.

This *Magazine* condemns the policy of the B. of L. E. It is a policy of unyielding hostility to the B. of L. F., and as such, we denounce it. We have no war with individual engineers. The *Magazine* is the friend of the B. of L. E. as an organization, but it is uncompromisingly opposed to its policy wherein the B. of L. F. is ostracised and insulted.

The B. of L. E., in a way well-calculated to arouse the indignation of every self-respecting member of the B. of L. F., virtually tells our Brotherhood that it will have nothing to do with it. This *Magazine* accepts the challenge. Let the divorce be complete. Let the two Orders in future stand alone, each upon its own dignity, independence and self-respect. The B. of L. F. has no further overtures to make. We simply place the responsibility where it belongs. The *Firemen's Magazine* will continue, with such ability as it can command, to vindicate the B. of L. F. We do not fear the final outcome. We are not solicitous about the verdict. We are simply interested in telling the truth, in exposing insult and in setting the Brotherhood of Locomotive Firemen in its proper light before men who admire justice and detest every semblance of aristocracy in labor organizations.

THE *Laster* refers to the "slave labor districts of Pennsylvania," and the designation is just. The slavery which Pennsylvania maintains in her mines is more infamous and in all regards more degrading, than any slavery ever known in the United States.

STANDING BY THE RIGHT.

Davy Crockett, the once famous backwoods hunter, statesman and philosopher of Tennessee, is credited with the saying, "First know you are right and then go ahead;" and Paul says, "and having done all, stand." To find the right is sometimes toilsome. It taxes men's patience, their powers of investigation, and demands sound judgment. Only men who desire the right ever find it, or, if they find it and do not act upon it, do not "go ahead," it is to them the same as if they had not found it. The demand is, not only to find the right, but to act upon it—stand by it. To do this requires moral courage—the very best type of manhood the world has ever produced, or ever will produce. It is the all-sustaining, transforming, revolutionizing, exalting principle. It is the one thing needful in human affairs. There are men who know they are right, but who lack the courage to "go ahead," and as men cannot be "strictly neutral," it is invariably the case that such men go wrong, not because they are necessarily vicious, but because they lack the courage to pursue the right and take the consequences.

This *Magazine* has pointed out as concisely as it was in its power to do, that it had become eminently right for the Brotherhood of Locomotive Firemen to inform the Brotherhood of Locomotive Engineers that the time had arrived to speak with discreet boldness of a matter, or matters, about which to remain longer silent would be accepted as a confession of inferiority on the part of the B. of L. F., and a willingness to wear the badge of humiliation and degradation—such self-abasement could not be tolerated—it could not be so much as thought of without surrendering all things which distinguish courage and reprobate poltroonery.

The B. of L. E. having assumed a superiority to the B. of L. F. in ways most offensive and sharply defined, it became this *Magazine*, the official organ of the B. of L. F., to administer such rebuke as the arrogance of B. of L. E. richly merited. There was nothing rash about it. The proceeding was deliberate, the result of cool consideration. It was the right thing to do, and the more we reflect upon the new departure the more our judgment approves the proceeding.

In this connection it affords us great satisfaction to say, not one member of the Brotherhood of Locomotive Firemen has so much as intimated that the *Magazine* has been wrong or indiscreet, on the contrary, letters have poured in upon us containing the most unequivocal indorsement of the utterances of the *Magazine*. We have before us, as we write, a letter from a locomotive engineer, a member of the B. of L. F., a man thoroughly posted in brotherhood matters, a "runner," in the prime of his young manhood, who dare "go ahead" when he knows he is right—and we take the liberty of giving a few extracts from a private letter in confirmation of what we have said. The writer says:

"I want to congratulate you on the fine appearance of our *Magazine* for 1889, and to say that the editorial in regard to federation, and the way the Engineers are acting in refusing our members admission into their order, meets with my hearty approval. You preach just the kind of sermons I expected you would, and just the kind I wanted to hear." * * * "We are all in favor of federation out in this Western country, and we have too much manhood and self respect to withdraw from the best labor organization on earth to join even the aristocratic B. of L. E. If they can get along without us, we can surely get along without them."

There is no mistaking such declarations, they have the ring of pure gold, and will pass current in the Lodges of Locomotive Firemen. The writer does not hesitate to state circumstantially that the B. of L. E. gave him the fullest recognition of acceptability as a member of that order—stipulating the one objection—his membership in the B. of L. F. That was the test. The member of the B. of L. F. must renounce his parent Brotherhood, wash himself clean of the contamination incident to association with the Brotherhood of Locomotive Firemen, and this fact, properly certified, he could enter the shining circle of the B. of L. E. Not much. The writer was not built that way, nor of that sort of material. The proposition was rejected with becoming scorn. The writer adds: "I am giving you my experience to show you how things

are working here, and I want to add that there are dozens of young engineers on the — who are faithful to the mother order, and will remain so."

Such declarations speak volumes for the B. of L. F. As the writer says, it "is the best labor organization on earth," at any rate, it is abreast of the best. The B. of L. E. in its efforts to degrade it made a fatal mistake and a fatal failure. This it may see and rectify. Thousands of engineers, members of the B. of L. E., are opposed to such a narrow, blind and bigoted policy. They feel kindly toward the B. of L. F. But whether the B. of L. E. recedes or stands, is no longer a proposition which the B. of L. F. will consider. The B. of L. F. can stand alone. It will shape its own policy, map out its own destiny and pursue its way quite independent of the B. of L. E. It will foster no antagonisms, but it will not be deflected from its course by any law the B. of L. E. has enacted or may enact. The day for pleadings and concessions has gone by, henceforth a policy of self-respecting independence—henceforth the motto will be "stand by the right." There was a time when the B. of L. F. pleaded and protested—when it was the victim of promises made only to be broken—of such things it has had enough. In future it will mass its resources of manliness and courage, and it will reach the destined goal, and don't you forget it.

FROM time to time comparisons are instituted between the railroad service in the United States and European countries, and all things considered, the United States stands first. We note that the Hungarian government runs the railroads of that country, and has a school at Buda-Pesth for the education of employes. In Hungary, when a young man enters the railway service, he expects to remain in it during life. He becomes a fixture. He don't quit to takesome other job—and this it is thought improves the service. It may be the right thing for Hungary and other European nations but wouldn't suit the United States.

THE Italian shoemakers of New Orleans have become so Americanized that they are demanding fair wages for their work.

PENNSYLVANIA HORRORS.

Pennsylvania, in many regards, stands in the front rank of the highly-favored states of the Union. She possesses natural resources of wealth upon a grand scale. Her wealth of coal and iron is incomputable. Honest labor in Pennsylvania ought to be fairly rewarded, the workingmen's home ought to be distinguished for contentment, for freedom from want, for all things worthy of our boasted civilization. But such is not the case. In large districts of this highly favored commonwealth, there are scenes of poverty, degradation, wretchedness and oppression which it would be difficult to parallel in any land within all the zones that belt the earth.

The New York *Herald*, one of the greatest newspapers of Christendom, sends its representatives into the anthracite coal regions of Pennsylvania, and in graphic vividness gives its readers pictures of horrors which ought to arouse universal indignation. The railroad kings and the coal kings are practicing in the anthracite coal regions atrocities which defy exaggeration. In a land, where heaven and earth are in alliance to make labor remunerative, and to make the lot of workingmen exceptionally free from anxiety, a few ravenous human wolves, like Corbin of the Reading railroad, the Drexel-Morgan syndicate and others of their type form combinations productive of starvation, revolt, misery and crime, until their infernal proceedings arouse Congress to action and produce wide-spread abhorrence. The New York *Herald*, in an editorial article of February 26th, captioned "The Reading Railway Company and the Coal Mines," says:

The rich men who brought on the horrors of the great strike in the anthracite coal regions of Pennsylvania last winter must have hearts of stone if they can read the report of the Tillman Congressional committee and be unmoved.

On another page will be found the second installment of the terrible arraignment of the coal barons, which the *Herald* has managed to secure in advance of its presentation to Congress.

Every citizen in the country should read this burning word picture of the enmillioned monster that feeds on human suffering, driving half-naked men, women and children out into the snow to perish, and planting its feet upon the bread trays and hearthstones of fifty thousand homes, simply that the price of coal may rise, to the misery of other helpless thousands shivering in the great cities.

This system should be blasted. It is a breeder of anarchy. It makes men go hungry in a land of plenty. It is the oppressor of the poor and the enemy of republican institutions.

To merely prate of the duty of the citizen to re-

spect the law in the presence of legally organized brigandage is a mockery of wrongs that cry out for justice.

The fact that fifty thousand starving miners remained on strike for months in bitter winter weather without resorting to lawlessness in the face of the heartless tyranny revealed in this Congressional report is proof enough of their patience and long-suffering qualities. They deserve prompt redress at the hands of Congress.

Let us stand guard over our civilization.

We hear much now-a-days about workingmen "antagonizing capital," but here we have a picture, or a whole gallery of pictures, each one well-calculated to excite fierce antipathy, in which capital is made, in the hands of gilded scoundrels, to impoverish laboring men, until, for the privilege of living, they are compelled to submit to the most degrading conditions. The *Herald* well says that the system of infernalism "should be blasted." It is a "breeder of anarchy," and anarchy would be an improvement upon such satanic order. Workingmen throughout the land should read the *Herald's* account of the worse than Russian rule in Pennsylvania, and remember that unless it is annihilated, it is as certain to spread as cholera, smallpox, or any other pestilence.

ROBERT G. INGERSOLL remarks that "when the rich combine it is for the purpose of 'exchanging ideas.' When the poor combine it is a 'conspiracy.' If they act in concert; if they do something, it is a 'mob.' If they defend themselves it is 'treason.' This being true, the question which forces itself upon the attention of the public is, can laws be so framed that the 'poor' shall in such matters as the eloquent Ingersoll refers to, have all the rights of the rich? The question is not a difficult one to answer, and it will, at no distant day be answered affirmatively.

Two hundred miles north of Sitka, is situated Douglas Island, a portion of which is said to be a solid mass of gold bearing ore, which upon calculation, it is estimated will produce \$1,200,000,000 of the precious metal, equal to the entire domestic product of the United States since 1793. One mine has been opened for which the owner has refused \$16,000,000.

DAKOTA has 4,300 miles of railroad in operation.

APRIL, 1889.

YES—NO.

The caption selected for this essay contains two of the smaller monosyllabic words in the English language. They are not poetic nor yet prophetic. They are never selected for euphony. The masters of oratory and eloquence find other vocables with which to embellish their periods when they desire to please the ear or captivate the mind. And yet, the words "yes" and "no" are imperial words. They are autocratic. They decide fates. They are decisive and conclusive. They have wrecked thrones and empires—governments, and they have preserved them. They are the words of courage, moral and physical; they are chivalric, knightly words. They are the exponents, the signs of ideas, which grasp all things good, beautiful and true, or that foreshadow a weak, vacillating, timid nature, without force of character, which is swayed by outward circumstances, and seldom or never by convictions, by conclusions, based upon balancing effects of act or policy. The world is full of instances illustrating the facts stated. The words "yes," "no," are usually replies to interrogatives, orally or mentally propounded. At least, we refer to such use of them for our present purpose. Take all the devastating wars that have scourged the world since the deluge, and there was a supreme moment when the little word, "no," would have sheathed every sword. From the time that Joshua forded the Jordan to take possession of the fair fields of Canaan down to the present, when the question of war was up for debate, there was a time when the question was asked, "Shall war be declared?" "Shall the slaughter begin?" If the reply was "yes"—

"Then shook the hills with thunder riven;
Then rush'd the steeds to battle driven;
And louder than the bolts of heaven
Far flashed the red artillery."

If the answer was "no," the "dogs of war" were restrained, and the people went forth in peace and security, to plow, and sow, and reap, and to gather the harvests. The melody of brooks answered to the minstrelsy of birds, the clarion of battle was hushed, and men were not required to contemplate fields of blood and carnage. We do not object to war if its purpose is to break the fetters of slaves and help them to realize the blessings of life, liberty and the pursuit of happiness. When the question is asked shall war be declared to emancipate man from the bondage of his fellow man when

he is found prostrate beneath the iron-shod hoofs of tyrants, the answer should always be "yes," for

"If there be on this earthly sphere,
A boon, an offering heaven holds dear,
'Tis the last libation Liberty draws
From the heart that bleeds and breaks in her cause."

All wars that have for their purpose the enthronement of the right, of justice, of truth, which propose to beat down injustice and tyranny, are right and must have the approval of high heaven. Heaven is pledged for the triumph of the right by human means, human agencies and effort. It is said that heaven helps those who strive to help themselves, but there are those who drool out feminine platitudes about a "good time coming," which will be ushered in by the interposition of some supernatural power. Such dreamers, find them where you may, if the question be, shall we rise, break our fetters, emancipate ourselves from bondage, throw off the yoke of degradation, disenthral ourselves from degrading vassalage? answer "no." It is the one little word that on such occasions expands to colossal proportions, and crashes like a thunderbolt. It paralyzes men's brawny arms, makes men chicken-hearted and white-livered, and accept bondage as a fore-ordained condition. In explanation, the men who answer "no," may say "the time is not ripe for war," or that the down-trodden masses are unorganized, that it will be arraying weakness against power," and when it is asked, "shall we federate for emancipation?" they still answer "no." Why? It does not require infinite wisdom to explain. Are they apostates? No, for the term implies that they had once been animated by noble ambitions and were the defenders of principles worthy of free men, and that they had fallen from their high estate. They never belonged to that class of heroes

"Who deem their swords,
On points of faith, more eloquent than words."

Nor are they necessarily traitors, nor yet, hypocrites who answer "no" when the question is, shall war be declared for the establishment in the world of a government in which the "rights of man" shall be recognized, and, if need be, perpetuated by war? They are simply cowards, often braggarts, demagogues, they are as incapable of comprehending liberty as a caged parrot, and could no more see "the shining footprints of her Deity" than a mousing owl. Their chosen blades are not "double-edged for this world and the next," and had they as much blood in their veins as is carried by an average elephant, they would not shed a drop of it to redeem a fellow man from bondage.

But dismissing such serious criticisms of the words "yes" and "no," it is worthy of remark that their potency is felt and ac-

knowledge in all the every-day affairs of life. It will be strange indeed if the reader, as his eye runs along these lines, does not recall instances in which had he said "no" instead of "yes," and *vice versa*, the stock of regrets in memory's store house would be indefinitely reduced. In this we do not refer to errors in judgment, mistakes incident to infallibility, but to cases in which every honorable consideration dictated a reply different from the one given. It were folly to complain that life's pathways are beset with temptations. It is man's prerogative to choose. No siren ever lured to destruction that conscience did not protest. No pathway of wrong was ever so bedecked with flowers that the eyes of the soul did not detect the hidden danger. The fiat of fate follows, never precedes, the victim's "yes" or "no." There was a time when every doomed man was the master of his own fate. The "yes" or the "no" was like a pebble at the fountain-head of a mighty river, it could, and it did, deflect the course of the stream. We do not propose to lapse into sentimentality. We are not in a melting mood. We are not boring for brine, and yet, in ten thousand instances the fate of many a man and many a family has been irrevocably decided by "yes" or "no." We take little stock in the oft-repeated Shakespearean proverb that

"There is a Providence that shapes our ends,
Rough hew them how we will,"

Unless this thing called "Providence" is a man's will. Fatalism robs man of the power to choose between the right and the wrong, and with this power eliminated, man ceases to be a man, and becomes a creature, the lowest in the animal kingdom, if not in the wide realm of animated nature. The freedom of the will, the power to decide, the courage to say "yes" or "no," to advance, to climb, to work out a noble destiny, to achieve victories for the right are the boasted birthright of man. But this inherent right, this all conquering power, may be used for man's unspeakable debasement, or, it may be abrogated with the same degrading results. Will-power, self-respect, fidelity to the right, moral courage, always have at command the words "yes" or "no." They are, "I will"—YES, or, "I will not"—NO. Little words, but on occasions of supreme moment, crucial ordeals, when destiny awaits decision, they expand to sublime proportions.

We are tempted to give illustrations, but we leave them to those who read and choose to suggest them for their own improvement, satisfied that the more serious their reflections, the more certainly will they be convinced that their destiny largely depends upon the right use of the monosyllabic vocables, "yes" and "no."

L. M. Opecue.

THE NAMES OF LODGES.

What's in a name? That which we call a rose,
By any other name would smell as sweet.

—Shakespeare

Though the rose would be sweet were it not call'd
a rose—
Thou evil, called good, would our peace still oppose—
Though gall would be bitter, were honey its name—
And a mouse, christened bear, were a mouse all the same;
Yet, who has not felt the strong power of a word,
The magic that thrills us when some names are heard?

—I. T. Watson.

Reading and glancing through the January number of the *Magazine*, I came at last to "Subordinate Lodges." Ordinarily I do not read the names of the Lodges, contenting myself with looking at the last in the list to ascertain the number, caring little for the name. No. 393, the last, pleases me much. "Three hundred and ninety-three Lodges," I said to myself, "is a good number, tells a grand story of advancement, of courage and work." And I said to myself many other things that were agreeable to myself and complimentary to the Brotherhood. I was in a soliloquizing, meditative mood, and without any purpose in view, began to read the names of the Lodges, and the more I read the more I became interested. The names served to bring the Brotherhood into bolder prominence, and I continued the pleasant exercise until, one by one, I had completed the list.

I noticed that early in the history of the order that "Hand in Hand" Lodge, No. 2, was organized. What a world of meaning in that name! United, hand in hand, union of purpose, of ambition, of resolves to stand or fall together. The name is a synonym of strength, of fraternity and of friendship. It is a good name. It could not be improved. And then comes "Adopted Daughter" Lodge, No. 3. I can fancy that the sturdy fireman who chose that name said, "the time will come in our history when the Lodge will be required to adopt the daughters of brother firemen who fall at their post of duty. It will be a father to fatherless children, will give them a home and watch over their tender years, and in many ways seek their comfort and guard them against the evils that surround the helpless." Following, comes "Charity" Lodge, No. 5. The name suggests that the members of the Lodge will learn and enjoy the "luxury of doing good," and will exclaim,

"True charity, a plant divinely nursed,
Fed by the love from which it rose at first,
Thrives against hope, and in the modest scene,
Storms but enliven its unfading green;
Exuberant in the shadow it supplies,
Its fruit on earth, its growth above the skies."

I liked the names "Excelsior," No. 11, and "Eureka," No. 14. The former is indicative of ambition. It is an ascending name, it

means moral elevation, while the latter is an exclamation of success, of hoped-for fruitions realized. It goes without the saying that "Industrial" is eminently practical, if not poetic, and means business from start to finish, while "Phoenix" has the ring of mythological lore, as pretty as it is expressive. "Connecting Link," suggests a chain which binds the members to the Lodge, and all the Lodges in Brotherhood bonds of unity and strength. No. 33 starts out with "Success" for a name, and signifies, I conjecture, that the history of the Lodge shall demonstrate the propriety of its name. "New Hope" is good—an intimation that

"Hope springs eternal in the human breast,"

And that the members of No. 37, as they meet with difficulties, say—

"For me—I hold no commerce with despair."

Old hope, or hope deferred, maketh the heart sick, but "New Hope"—

"Man's heart at once inspirits and serenest,
Nor makes him pay his wisdom for his joy."

It is pleasant to see a Lodge named "Blooming" for it suggests fruit, later on, or, is a reminder of that beautiful tree of the South land, which blooms and fruits at the same time. A blooming Lodge ought to be beautiful, and such, I conjecture, is No. 40. "Onward" has a get up and go sound in consonance with the spirit of the age. Not content to stand still, it moves—onward is not backward nor downward. It means robustness, courage, determination, and must be in close relation to "Triumphant" Lodge; No. 47, which speaks of victory, never of defeat. And now comes "Good Will." It was a part of the song of the angels to the shepherds as they watched their flocks on the plains of Judea. "Peace on earth, good will towards men." There is always a demand for "good will" and No. 52 can never have a surplus. And "Anchor" is beautifully significant. Hopes often center in the anchor when danger threatens. "Banner" is well calculated to excite pleasant fancies. Banners float in the breeze when armies are marching and when battles are raging. Not less felicitous is the name "United," borne by Lodge No. 60, and its motto should be, "United We Stand." "Hercules" is an appropriate name for a Lodge, because it signifies strength, a willingness to undertake tasks requiring strength of will-power to overcome obstacles and achieve victory. "Challenge" ought to signify courage, confidence in the purposes of the Brotherhood. In "Welcome" there is warmth, and every synonym of the word is full of fruition. In "Enterprise" we have a name that voices the spirit of the times, where all is activity and alertness. It means that No. 75 will keep up with the procession. In such names as "Self Help," "Perseverance," "Advance," "Confidence" and "Progress," every suggestion is in the line of growth, in-

fluence and elevation. "Peace" is a charming name. It taboos wrangling.

"Oh, peace! thou source and soul of social life;
Beneath whose calm, inspiring influence,
Science his view enlarges, art refines,
And swelling commerce opens all her ports;
Blest the man divine who gave us thee."

"Beacon" is well chosen, at once a guide and a warning. Many a tempest-tossed mariner has hailed with delight the beacon, and if No. 111 serves such a purpose the Brotherhood will make due reward of merit. "Fellowship" is something more than welcome. It is brotherhood in the best sense of the term, and is very properly followed by "Federation," a name that combines faith and hope, strength, courage and victory. No. 122 is well named. It is a name that lays hold upon victory, and

"The harder matched, the greater victory."

I like the names "Pilot," "Guide," and "Golden Rule." The latter, especially, is happy and is fruitful of pleasing and profitable reflections—a faithful *pilot*, a conscientious *guide*, is just what many a man needs in this life, where channels are treacherous and paths labyrinthian, and the "golden rule" acted upon will prove pilot and guide to all

"Poor wanderers of a stormy day."

"Protection" and "Union" are immensely significant, and the more the names are studied, the more their teachings will be found "just in time" to help the student out of many perplexities. "Just in time," is, perhaps, all things considered, the best time, not too soon, nor yet too late, it is an auspicious time. It is the time that takes affairs at the flood, and when the tide "leads to fortunes." "Echo" and "Sunbeam" are highly practical, while "Bee Hive" means, kill the drones and then gather the honey of wisdom from every opportunity and store it up for future use. "Good intent" means well, and when good intentions are worked out in everyday life, the harvest is always rich and abundant. "Fidelity" is a virtue of commanding importance and without it, decadence would at once take possession. "Friendly Hand," like "Hand in Hand," has a wealth of meaning suggestive of help and fraternity. "Oriole" is suggestive of brilliant regalia, perhaps, on parade, but "Provident" signifies prompt payment of dues and assessments, that when disability comes, if come it should, and as come it does to many, there can be no disputing the beneficiary claim, and widows and orphans rise up and pronounce blessings upon provident fathers. "Lucky Thought" is closely allied to "Just in Time," and a near relative of "Glad Tidings." "Liberty" has, as it ought to have, a place in the list of Lodge names.

"Oh, give me liberty!

For were even Paradise my prison,
Still I should long to leap the crystal wall."

"Neighbor" is a good name. Sometimes the question is asked, "Who is thy neighbor?" and the answer can only be that man who is ready to do a kindness. "Endeavor," I conclude, means with the boys of "267," that should they fail sometimes, they will "try, try again." "Home" is always sweet to the ear, to the eye and to the heart, and "Justice" is what the Brotherhood demands. "Tried and True" means that the boys of 316 will stand by their parent Order without wavering, even when they lay aside the pick and scoop for the throttle. "Covenant" signifies pledge. It abhors apostacy and is true to "Friendship," the beauties and blessings of which, doubtless, inspired the charter members of 375.

What's in a name? O, there is much in a name. "A good name is rather to be chosen than great riches." Having finished the list, and noted names of localities and persons, I gave fancy its coveted freedom, while all the Lodges passed in review, until I felt

"Like the Chaldean, who could watch the stars
Till he had peopled them with beings bright
As their own beams."

One of the Boys.

THE NARROW GAUGE.

*[A Time Table of the Narrow Gauge Railroad
leading from Time to Eternity.]*

The line from heaven by Christ was made,
With heavenly truths the rails are laid.
From earth to heaven the line extends
To life eternal, where it ends.

Repentance is the station house
Where passengers are taken in.
No fare for them there is to pay,
For Jesus is Himself the way.

The Bible is the engineer;
It points the way to heaven so clear,
Through tunnels dark and dreary here,
It does the way to glory steer.

God's love the fire, His truth the steam,
Which drives the engine and the train.
All you who would to glory ride
Must come to Christ, in Him abide.

Come then, poor sinner, now's the time,
At any station on the line,
If you repent and turn from sin,
The train will stop and take you in."

J. C. Muzzey.

"Travel by this road."

I DID.

Lo! that's the self-same, sweet refrain
Sang in the same seductive strain,
That long, long years ago I heard
And all my soul's best impulse stirred.

"No fare to pay, no fare to pay;"
'Twas there its chief attraction lay,
Because, of course, you understand
There is no woman in this land,
Nor any other land beside,
But dearly loves a dead-head ride.

You may be sure I wasn't slow
To pack my trunk and say I'd go.
No baggage master came "on deck"

To give the customary check;
Instead, there came the engineer,
Who said, "We don't check baggage here."

"No tea gowns, parrots, poodle dogs,
No fashion whims, no tony 'togs,'
Nor Mother Hubbards yet were found
In that fair land for which we're bound."
One treasure from my worldly hoard
I quickly took and went on board.
The one fair thing that I loved best
I dared to take and left the rest.

'Twas one fair, fragile, fragrant flower
That I had plucked in pleasure's bower,
And gladly wore upon my heart
Till of my life it grew a part,
And I had thought it easier far
From yonder heavens to strike a star,
Than from my life to strike the light
That all its shadowed ways made bright.

When we were fairly heavenward bound,
I soon discovered, looking round,
That each one of the passengers
In these not over-crowded cars,
Like me, held close the world's bequest,
The one fair thing that each loved best.

Soon the Conductor up the aisle
Came with a calm and luring smile.
Into his hand each fare was paid,
For each thereon his treasure laid:
The one fair thing that life could lend
To cheer him to his journey's end
Relinquished when 'twas just begun,
And said, "Thy will, not mine, be done."

Amazed, by me I saw Him stand
And my loved blossom straight demand.
"No sir," I cried, "your schedules say
There is no fare for us to pay.
By that I'll prove your road's a fraud,
I will not ride another rod.
Little care I for laugh or scoff,
Just stop your train and I'll get off."

I looked to see an angry frown,
But lo, instead, He sat him down
And said, "Thou canst not surely know
Those deathless joys to which we go.
The flowers of so much brighter hue
Thou wilt forget this ever grew.
This petty price, is't hard to pay?
Thy will be done, is't hard to say?
That thou these greater joys might see
I said it in Gethsemane."

"Thy forehead bears my seal and sign,
By this I know that thou art mine.
For thee I drank that bitter cup,
I will not lightly give thee up.
Dost longer doubt? Lo, I am He
Who died the death on Calvary."

He ceased: With deep and breathless awe
The nail print in his hand I saw.
Whereon to hide the cruel sight,
I laid my treasure and blossom bright.
Such grief and shame my soul did sway
"Thy will be done," I could not say.
Perchance He saw the quick tears start
And read the sentence in my heart.

And when at times I miss the flower
That I had plucked in pleasure's bower,
And sigh, "Ah, me! When shall I come
To those fair fields of endless bloom?"
He says, the while in awe I bow,
"'Tis but a little farther now."

And when I reach that brighter land,
When its full joy I understand,
And see those flowers beyond compare,
I shall be glad I paid my fare.

—Will-o'-the-wisp.

Concord, N. H.]*

Mechanical

Contributions to this Department should reach the Editor not later than the 5th of each month.

APRIL, 1889.

MR. EDITOR:—Having in a previous article insisted that the cross-head moves through the guides in both forward and back stroke of the piston, it would be inconsistent, it seems to me, to locate the fulcrum from, or by means of which a locomotive performs its work, anywhere except at the center of axle. I reason upon this question in this manner: A locomotive that depends on changing a reciprocating motion to a rotary motion by means of a crank for its motive power, can never move herself without the rotation of the driver. That the driver of a locomotive is turned from a fulcrum at the center of the axle, when the locomotive slips, is not disputed by any of our writers. Do we not agree, then, that the rotary motion of the wheel is due to the action of a lever with its fulcrum at the center of the axle? Then having determined that the translation of the locomotive depends on the rotation of the wheels, it occurs to me that we are agreed on the point in controversy. But some one interposes, and says "that the translation of the locomotive depends as much on adhesion to the rail as in rotation of the wheel." I have to admit the force of this remark, but *adhesion* is not *fulcrum*, and a locomotive developing her motive power in the manner I have stated, might be constructed in such a manner as to "translate" herself whether she adhered to the rail or not; and this without changing, as it appears to me, a single mechanical principle involved in the construction of the modern locomotive. I will give my scheme for accomplishing this later on, but will say here that I do not regard it practical; simply possible, and only introduce it to aid the mind in determining the "correct mechanical principle" involved. A machine might be constructed to move itself by adhesion to the rail without the absolute necessity of the rotation of her wheels in some such manner as the following: Suppose the back ends of both main rods were disconnected from the pins and connected to some form of gripping device that would engage the rail when downward and backward pressure were brought to bear on them, and the valve gear was so arranged as to control the motion of the pistons. By such an arrangement no doubt the device would move forward on the rail, but

would be more of a walking machine than a locomotive, and would differ from the modern locomotive in not depending for its motive power on changing reciprocating to rotary motion through the medium of a crank.

When I read "Vulcan's" proposition in the January number I thought that would settle the question of "fulcrum," but it seems not, for "A. D.," in the the February number, still "sticks to the rail," and applies the power to the driver through the frame. If the power is applied to the driver through the frame it must be applied at the axle. Now, we have located two points of our lever according to "A. D.;" where shall we locate the other? Where is the resistance? I can see but one place, namely, the pin. But this, in a wheel with the pin at the rail, would bring the fulcrum and resistance to the same point; and this, with the power at the axle, gives us a new kind of lever, one not included in the mechanical powers.

Here let me introduce a drawing to illustrate some points in connection with this question.

In the figure, 1 is a stick of timber resting on a roller, 2, at one end. This roller has holes (indicated by dotted lines) through it at right angles. Into one of these holes is inserted a bar, 3. A man standing at the point 6, and pulling in the direction of the arrow at the top, the whole combination will be moved in the direction of the arrow near the point 6, and we have a primitive locomotive. The question now is, where is the fulcrum of the lever, 3, that is made use of by the man to move the combination? According to Mr. Lockwood, "A. D.," and others, it is at the point 7. But why at 7 more than at the point 8? Have we a single lever with two fulcrums? Impossible! There is one fulcrum only, and that is at the center of the roller, and which represents the driver in a modern locomotive. Suppose we continue to turn the roller by means of the bar until it is embraced by the semi-circular cavity, 4, which corresponds to the axle-box in the locomotive? Does this cause a change in the points of the lever? I fail to see a reason why, and it will take a full grown d—l instead of an "imp" to make me believe it. There is a change of results, of course, but no change in the

points of the lever. Let us suppose, again, that after reaching the position 4, the roller strikes a lubricated surface, and slips. There is again a change of results, and Mr. Lockwood and others insist that there is a simultaneous change of the points of the lever, the fulcrum changing from the bottom to the center of the roller. I can not make it appear that way to me. The roller is rotated from a fulcrum at its center, and on this rotation, as a primary cause, the motion of the timber depends. No matter how perfect the adhesion, if the roller can not be rotated the device does not move. Then the fault is in the device. If the roller slips there is no motion of the timber, but the fault is not in the construction. It is outside of it. In the case of a man on a hillside, with a bar under a stone lifting, it never occurred to me that if he slipped, the relative points of the lever by which he sought to lift the stone, and by which he does eventually lift it, if at all, changed.

The only theory on which the fulcrum in question can be located at the rail is, that there is but one fulcrum, and that the universe. Even a balloon in the air rests on the earth, and the earth in turn is supported in some manner. If the rail is the fulcrum for no other reason than that the wheel adheres to it, the ties must be the fulcrum because the rail adheres to them, and then the earth because the ties adhere to it. I prefer to locate the point in controversy somewhere in the locomotive, say at the center of the driving axle. When I wish to move a locomotive from a fulcrum at the rail, I use a "pinch bar." And in justice to myself, though not a very old runner, I will say that I presume I have made several miles in that way, but I prefer the plan with the fulcrum at center of axle.

Knowing that I am in some danger of being called a "crank" on grades, I wish again to put my locomotive on one so steep that the wheels will not adhere to the rail, no matter how much weight may be put into the construction. In order to get up this grade I arrange the machinery so that I can construct a drum on the main axle between the wheels, with a diameter equal to the diameter of the drivers. At the top of the grade I secure a wire cable, carry it to the bottom of the hill, and after passing it once or twice around the drum, draw it tight and fasten the lower end. I now give the engine steam and the drivers turn but do not adhere to the rail. I fancy I see her ascend the grade "allee samee." Now where is the fulcrum? Have we anything here but the old problem of the windlass, or wheel and axle, with fulcrum at the center of axle, resistance at surface of axle, and power applied at the pin. The cable represents adhesion, not fulcrum.

Another view. Suppose you pull down

both wedges on the right side of an eight-wheel engine, leaving a half-inch of play between the boxes and jaws, having previously placed the engine with the right pins down. Now, give her steam, and if the fulcrum is at the rail as stated, and the power applied through the frame, the back jaws will be pulled ahead against the back surfaces of the driving boxes. On the other hand, if the fulcrum is at the center of axle, and the resistance at the surface of axle, the boxes will have to remain firmly against the front jaws of the frame. I have never tried this experiment, but the idea that the frame *pulls* against the boxes in that position and leaves all of the lost motion in front of them, seems to me ridiculous. Just think of the difference of *leading* a bicycle and propelling it in the proper manner.

Referring to my inquiry in the December number, the latter part of it was superfluous, as stated by "Vulcan" in the February number.

"Philadelphian" will please accept my thanks for his statement of the laws of momentum. Almost any one has an idea of what momentum is, in an abstract sense, but the laws governing its influence in mechanical construction is what we are not so familiar with.

There are other matters of which I would like to speak, but forbear for the present, as I have consumed all the space I deserve. In my next I shall try to give Mr. Lockwood's "hammer-blow" theory a little "tunk."

A. H. Tucker.

PHILADELPHIA, Pa., February 26, 1889.

MR. EDITOR:—If the joints and seams of a boiler, together with the throttle, whistle, and cocks and valves were air tight, what would be in the boiler above the water, after the steam has gone down? In answer to "Ash Hoe's" inquiry to above: 1st. Water is compounded of oxygen (symbol O) and hydrogen (symbol H). Two volumes or measures of hydrogen gas (H) to one of oxygen gas, (O). The proportion of the ingredients in weight is 88.9 parts of O to 11.1 H. It has its maximum density at 39° F.h.r. Changes to steam under the ordinary atmospheric pressure at 212° and to ice at 32° (Webster). In answer to "Ash Hoe's inquiry I can not see where there is any vacuum. When a volume of water is being heated the water or particles nearest to the fire become heated first and are lighter, than its surrounding bulk of water, rises to the top and expands driving the other particles down and they become heated. And so on until the whole body becomes heated through. This is termed simmering. But when the volume of water has passed this point, it is called boiling, and the particles now arising expand and form steam, or, as I have seen it termed "water vapor." Now

everything about the boiler is made air tight. The fire drawn and steam dies down and water in the boiler gets cold. Now comes the question: Is there a vacuum or not between water and top of boiler. I claim there is not.

Steam defined according to Webster: "The elastic air form fluid into which water is converted when heated to the boiling point—water in the gaseous state."

Now what becomes of the gases which are converted with the steam, after it condenses. I claim they do not impregnate with the water, but lie between the water and top of boiler, in the shape of air. There has nothing entered the boiler but water, that is compounded of O and H. And this is heated, and the particles rise and expand in the shape of O and H, and form steam or water vapor, which condenses again in the shape of water, leaving in its place particles of O and H in their proportionate values, destroying in my opinion the theory of vacuum. If I am right or wrong I leave for others to decide. I have known this from actual experience. Having brought engine in, drew the fire, had engine filled with water so that there would be two solid gauges, and engine cooled. When I came to raise steam, I have found that the first gauge of water was warm, while in steam gauge there was no pressure of any kind. Yet in placing the finger at third gauge I would feel a pressure of air coming from it. I claim that there was air between water and top of boiler after condensing of steam and the present steam was forcing a portion of it out, and would continue to do so, act and react until there was no water in boiler of which to make steam.

Seeking Information.

RICHMOND, VA., February 24, 1889.

MR. EDITOR:—I don't see where "E. S." gets any mention of brick arch on page 904, *December Magazine*, as I only spoke of dead grate with brick on top. The accompanying sketch may make my meaning plainer. B

A is the arch supported on water pipes, below, marked D, E is the dead grate with brick on top. With fire-boxes eleven feet long it is as difficult a matter to keep a uniform heat as in one two or three feet shorter. With the brick in front we can keep a hotter

fire, and it being closer to the flue sheet prevents the admission of cold air in a much surer manner than by keeping fire all the way; besides, there is almost always a small opening between the arch and flue sheet, so the gases that pass in the direction marked by arrow are heated more intensely than at any other part of the furnace. When anything occurs to allow air through the dead grate it alters the steaming nearly equal to a loose steam or exhaust pipe. I often wonder at not seeing a furnace door after the order of the sketch, which is common on English engines. The air is admitted by a slide similar to the ones I see here, but instead of striking a liner and passing over the arch into the flues it can only pass downward on the fire where, mixing with the gases, it passes into the flues at a high temperature. I think it will be voted impossible for smoke or sparks to be drawn into steam chests or cylinders running in forward motion, steam shut off.

I don't think "Canada" treats "Fireman" exactly right in blaming him for piston blowing and gumming up by the smoke. I never could see how it was possible for it to do so, when we note the position of the valve and piston, which are very much like a double-acting pump, the suction coming in at cylinder cocks and discharging at exhaust nozzle.

I think "Ash Hoe's" engineer is right. I have often seen boilers after cooling down. If the judge cock was raised you could feel and hear the air rushing in, so there must have been some vacuum.

W. A. Gore.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during March. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

Car axle box, T. B. Stewart.
Car coupling, A. K. Kline.
Stock car, S. W. Remer.
Railway rail, J. A. Woodbury.
Pneumatic railway signal, J. Olmstead.
Car brake, J. W. Jacobs.
Car axle lubricator, T. H. Paul.
Safety shoe for railway cars, Emery & Doyen.
Spark arrester, Hawkes & Paine.
Car heater, C. F. Pike.
Car axle, J. W. Hard.
Preserving wood ties, A. B. Tripler.
Railway switch, P. Carrigan.
Operating railway signals, R. Gidley.

THE news from El Paso, Texas, is to the effect that Mexico is to have another railroad, a line from Chihuahua to Cusihuiriachic, a large and prosperous mining camp in the Sierra Madre, west of the Mexican Central.

The Shaw Locomotive.

Single Slide Valve, Duplex Acting, Steam Counter-Balanced, Double-Cylindrical Locomotive.

MR. EDITOR:—In the February *Magazine*, pages 118 and 119, I endeavored to make clear by illustration and description the difference in "wear and tear" between the ordinary counter-balance locomotive, i. e. using reciprocating and rotating parts in combination, to the counter-balanced by rotating only, the counter-balance, as contradistinguished from a steam counter-balanced locomotive, the steam being controlled by a single valve with duplex action, acting upon duplicated rotary and reciprocating parts, moved by steam pressure in opposite directions to each other equi-distant from a common center. If any doubts the illustrations, the originals from which they were taken are to be seen at our Philadelphia office.

At the Chicago Exposition of Railway Appliances in 1883, the locomotive above shown was on exhibition and to it the medal, honorable mention and award for the best "locomotive balance" was given.

Messrs. Rand, McNally & Co., of Chicago, the celebrated railway printers, were desirous of showing their skill as designers, engravers and printers, with the understanding that there should be no limit as to the price they were to charge, but with the further understanding that the work was to be in the very highest style of the wood engraver's art, and their name to be attached as a warrantee of its excellence. The cut at the head of this article is the one produced by them in accordance with this understanding.

On this locomotive I have traveled more than ten thousand miles, most of it at com-

paratively a very high rate of speed, to prove the correctness of a mechanical principle. She has run in various services over thirty thousand miles.

But for the mechanical principles involved, and as successfully demonstrated in this locomotive, I doubt if I, a manufacturer of machinery for the manufacture of "specialties in paper," and as a manufacturer of such specialties, would be writing this article, and the many which have preceded it in these columns, to puzzle the brains of the many firemen who are "plugging coal to a Modoc," in hopes to some

day in the dim and distant future, become a master of one of these monsters of the rail, and a "Sir Knight of the Throttle." There is to me this abiding faith, that not one of them will prove any the less competent as a locomotive fireman or engineer for having pondered upon what I have written, and I know of no larger question delegated to mortal men than this, to the most skillful and honorable calling. Thirty thousand locomotive engineers and thirty thousand firemen in the United States, with the bite of the drivers of their locomotives earn the "fixed charges, interest and dividends" on nine thousand millions (\$9,000,000,000) of invested capital. I will give below some of the details of construction of this locomotive, which I trust will prove interesting:

DETAILS.

Built by the Hinkley Locomotive Works, Boston, Mass. Thirty-seven (37) ton soft coal passenger locomotive.

Total wheel base of locomotive and tender	42 feet.
Total weight of locomotive in working order	74,300 lbs.
Total weight of locomotive and tender	121,900 lbs.
Total weight of locomotive on driving wheels, about	47,000 lbs.
Diameter of driving wheels	69 inches.
Diameter of truck wheels	30 inches.
Diameter of cylinders, two on each side	10½ inches.
Diameter of cylinders equi distant to one	14.8 inches.
Length of stroke	21 inches.
Diameter of boiler outside of smallest ring	48¾ inches.
Number of tubes	161
Diameter of tubes	2 inches.
Length of tubes	11 feet.
Length of fire-box	60 inches.
Width of fire-box	35½ inches.
Height of fire box	66 inches.
Square feet of grate surface	14.8 sq. ft.
Square feet of heating surface in fire-box	101.25 sq. ft.
Square feet of heating surface in tubes	180.5 sq. ft.
Total square feet of heating surface	281.75 sq. ft.
Exhaust nozzle, 3-inch diameter	Double.

Size of steam ports inside cylinders	1x8 inches.
Size of steam ports outside of inside cylinders	2x8 inches.
Size of exhaust ports	25x17 inches.
Throw of eccentric	5 inches.
Travel of valve	4 inches.
Outside lap of valve	¾ inch.
Diameter of main axle journals	7 inches.
Length of main axle journals	7 inches.
Diameter of engine truck journals	4½ inches.
Length of truck journals	8 inches.
Capacity of tank	2,000 gallons.

RECORD.

On Jack-Screws, in position, as she ran at the Chicago National Exposition of Railway Appliances, 1883, and on other tests, over 100 miles per hour.

On the rail, 7 miles in 5½ minutes. One loaded passenger car.

On the rail, 60 miles in 50 minutes. One loaded passenger car, excluding slow-ups and stops, 61 minutes.

Urbana, Ohio, to Columbus, May 12, 1883. Two loaded passenger cars.

Eight consecutive miles—seconds per mile, 61, 59, 54, 49, 50, 49, 51, 51.

Eight consecutive miles—miles per hour, 59.0, 64.8, 67.7, 73.5, 72.0, 73.5, 70.6, 70.6.

Three consecutive miles—Seconds per mile, 59, 57, 47.

Three consecutive miles—Miles per hour, 61.0, 63.2, 76.6.

William E. Lockwood.

LOCH ÆRIE, March 5, 1889.

MR. EDITOR:—First and foremost in the Mechanical Department for March, I notice the article of our friend "E. S.," in which he defines his position again, and thus proposes to leave the wheel leverage, as continued argument on the question would only be a reiteration of former statements. As I have before explained when I left the "hammer-blow" discussion, I deem it useless to go over the same ground again and again, and unless something entirely new is brought up on the wheel leverage by some one, it may, perhaps, be as well to quit the subject, and I will only quote "F. T." on this matter, and leave it for the present. "F. T." says, "Forney" says, "if we regard the fulcrum as the point which is fixed in relation to the locomotive, it is at the centre of the axle;" and as we have tried to consider it as a completed machine, we cannot, of course, look at it in any other way, and accept Mr. Forney's statement as in our favor.

As I have expressed myself as somewhat in favor of "Side Rod," even if his information was at second-hand, I have nothing to add on this matter.

"E. S." then introduces the subject of lame men, and the difficulty of telling where the defects lies, and this reminds me of times gone by, in which I used to drive horses, and one of them had a limp in one of his hind legs. You had to watch closely to find out which leg it was, but after you found out that much all further search was encompassed with insurmountable difficulties, for during all the years I drove him, I could never fully determine where the difficulty was, whether it was in the hip, hock,

or fetlock, but as the horse would lose all traces of this lameness just as soon as he had been driven a mile or so, it did not greatly injure him for service, nor did I deem it best to resort to any heroic treatments, for fear I might make him worse. The valve motion of a locomotive, however, can be diagnosed much more readily, and as it can even be dissected without loss of blood or life, there ought to be no difficulty in finding and applying suitable remedies to any malady, which might afflict these parts. Bro. "E. S.'s" illustrations of valve motions and their ailments, on Page 215, of March *Magazine*, are certainly good and deserve careful study by all interested on this subject, and I am sure every fireman and engineer ought to be interested in this matter. I have ever been an ardent student of this important subject, because, at a very early period of my fireman's apprenticeship, I was thrown into intimate acquaintance with some "scrap piles," or "scrap heaps," as our boys designate them, which were a terror to all concerned, and of which we used to think our road had a monopoly, but it seems that other roads are afflicted with some of the same; vide "E. S." and "Brick Arch" in same *Magazine*. I have therefore carefully read "E. S.'s" article, and find that he makes the illustrations very plain, and shows what the trouble is in the distribution of the steam in diagrams A 2, and B 2, which he says is "too much steam in front," and thus far, "E. S." is correct, but when he says "it also indicates that the valve is too far forward," he has certainly made a mistake, which I believe may easily be excused, not for want of thought, but simply from a lack of time to reconsider the subject, for as we hear Bro. "E. S." has to devote thirteen hours to work, and after taking out a few hours for meals and relaxation, and seven or eight for sleep, he has not a great many hours left over, to con the problems presented and prepare them for the *Magazine*. With all due respect therefore for "E. S.," and his good intentions, let me say that when too much steam is admitted in front, it is an evidence that the valve is too far back, opening the front port too wide, and keeping it open too long, and that "E. S.'s" solution of the problem should therefore be just the opposite, that is, "to pull that valve back," and should be *push it ahead*, he will see this will not allow the valve to open the front port as wide, nor to keep it open as long, and of course it will add just that much to the back ports, and thus equalize them. The remedy which "E. S." proposes to apply, is to lengthen the eccentric blade, or rod, as we call it, to pull the valve back, but as this implies the use of a rocker-arm, and as I have tried to show that the valve must be put ahead, the proper remedy will be to shorten the eccentric rod, thus draw-

ing the lower rocker-arm back and throwing the upper arm and the valve ahead.

On Fig. 3 I can offer no improvement, but No. 4 is liable to the same correction as above pointed out for No. 2, and the remedy would be just the reverse to that indicated by "E. S." On No. 5 there is no specified side which is to be lengthened, but according to the diagrams given, I would shorten on the right eccentric rod to put that valve farther ahead, and lengthen on the left to put that valve back. I hope "E. S." will pardon these corrections, for I am sure he would have found them himself in due time, and while an "eccentric" never revolves true to the circle it was turned on, we ever find the "Strap" describing a true circle, and so may it be with our "Eccentric Strap."

Our contributor, "Brick Arch," while admitting that he has found "the full throttle and short cut-off theory" to work good with some engines, is inclined to question its application as a rule, because he has found a Rogers engine so badly adjusted in the valve motion that she would not run when cut back, where he is willing to admit she ought to have been. A master mechanic who will permit his locomotives to run in the shape described by "B. A.," has no proper idea of economy, and therefore cannot expect the cultivation of that virtue by the men in his charge, to whom he furnishes such tools to work with. I am sorry to say that there are a number of roads, which are penny wise (in repairs) and pound foolish (in fuel), who would rather spend thousands of dollars for fuel, than hundreds for repairs or improvements.

The "boys" still keep poking at me about the brick arch, when I have several times confessed my ignorance on that subject, and have never ventured to have anything to say about them.

Whenever "Brother Tucker" makes a "point," he does it so "sharply" and "pointedly," as to leave no room to doubt the "point," and I hope that the "points," while they are very fine, will be so plainly apparent, as to force conviction even upon Mr. Lockwood, who reminds me of the old Scotch lady, who said: "I am open to conviction; but show me the man that can convince me." I hope Bro. Tucker will succeed, where so many have failed, and get Mr. Lockwood to admit that the bottom of the wheel "gets there all the same."

Bro. "E. S." seems to have found more time than ordinarily, having another article in which he answers "Ash Hoe," and gives a curious instance of an engine pumping herself full while standing in the house, which is something that I never knew to happen on any locomotive in my charge, and I was employed as watchman in the roundhouse for four and one-half years, and

had from twenty-five to twenty-eight locomotives to look after every day or night. Nevertheless I can believe the story, for there is nothing contrary to the principles of natural philosophy in it, and the only reason I can give, why we never had a case like it here, may be in the fact that our hard coal locomotives are brought into the house with banked fires, and do not cool off between each trip, but often have fires in them for a month at a time. They have therefore only one chance to thirty of having the vacuum, and combination of open-heel cock to start a stream to fill said vacuum.

After answering "M. St. Peter" in regard to the questions asked by him, and accepting the pardon extended by Mr. Rauch, "E. S." gives us a little idea of his present, and past employment, in which I can heartily sympathize with him, for as before stated, I have been in the roundhouse business long enough to be pretty well acquainted with its attendant pleasures (?) and vexations. Our work differed very much, though from that described by "E. S.," for as stated we (that is myself and one assistant) had the charge of the roundhouse, oil and supplies and water tank, and also had to call the men who went out during the night or early morning hours. The locomotives ranging in number from twenty-five to twenty-eight were delivered to us in the roundhouse, and were also taken from there by their crews, and the fires brought in were supposed to be in good shape to go out with again on the next trip (usually about ten to twelve hours of an interval) so that we were generally not obliged to do anything to these fires, unless the engines were on irregular turns, and laid in over twelve hours, then of course we had to bar up the fire, put on fresh coal and see that there was a fair body of live coal in the fire box, to serve as a bed to start up the new fire when needed. We did not have to leave the roundhouse to take charge of incoming or outgoing engines, except at times to assist in wooding up engines which were to be cooled off for repairs or to be washed out, but nevertheless, between looking after the water and steam pressure in the boilers, watching the fires in the stoves and fixing the poor ones on the engines, building new fires in engines, which had been repaired or washed, watching the supply of water in the tanks, calling the men, furnishing oil and other supplies to outgoing and finding stalls for incoming engines in the house, or when its stalls (twenty-three in number) were full finding sheltered spots outside for the others, kept us so busy, that we were like "E. S.," in no great worry about "the fit of our suits," or "the set of our collars," or "our patent leathers or kids." Oh, no; when we got through we could go home, get a little breakfast, and then retire to our

virtuous couch, not even getting up for dinner, but sleeping like moles till 4 or 5 o'clock to be ready to go on again at 6 o'clock. On the day shift we had not so many locomotives on hand to look after, but in order to keep us out of mischief we had from one to three boilers to wash out, close up and to fill, sometimes several new fires to build, or, if not otherwise busy, we would turn to, to help the machinists, blacksmiths or boiler makers. I will not tell you about our hard coal firing on the road in this, but may some time give you some idea of what that is.

As an answer to "F. T.," would require a reopening of the wheel lever question, I will not make any reply, because it would involve a statement of ideas which have been fully stated several times already, and which can be found in back numbers of the *Magazine*.

"A Philadelphian" gives a scientific answer on momentum, and also on the diaphragm plate or sheet, which leave no room for question, or need any answer, and "F. T.'s" second article on steam is also explanatory and correct.

"Geo. E. Heath" asks "how to find the pressure of a 15x22 inch cylinder, with 130 pounds steam pressure." This question is rather vague, but as we are usually thinking on the power of our respective machines, and as the pressure on the piston is the only pressure that does us any good on a locomotive, I am inclined to think, that "Geo. E. Heath" alludes to this, rather than the pressure on the cylinder, which really does nothing toward turning the wheels. The rule to determine the pressure on the piston, is to multiply the area of the piston, by the pressure. The diameter of the piston is 15 inches as I understand "G. E. H.," this 15 multiplied by itself = 225 this multiplied by .7854 = 176 square inches which multiplied by the given pressure (130) = 22,880 pounds on the piston. The attention of "G. E. H." is, however, called to the fact, that with a boiler pressure of 130 pounds, not more than 90 is usually calculated to strike the piston, and as a matter of fact, even this pressure is far in excess of the average working pressure on the piston, for that depends on the point of cut-off, and exhaust, and the adjustment of the valves. Vulcan.

MR. EDITOR:—With your permission I would like to discuss the question asked by "Ash Hoe," in the February *Magazine*, page 117.

"Ash Hoe," are we to understand that there was a space in the boiler above the water before steam was generated? Of course we know that in actual work such is the fact, hence we will take it that way. If you will kindly read this through the conclusion reached will answer your question,

but it will be a different answer than that given by others in the *Magazine*.

The space in the boiler above the water to begin with is full of air. For convenience in following the illustrations let us conceive the boiler to be constructed of glass, that it is transparent, and that we see the process of making steam as it takes place within the boiler, and can view all the other visible changes. The fire is started; look there over the crown-sheet, along the sides of the boiler; you see little drops of water; they are gathering together, or appear to be, and are getting larger and are running down the insides of the boiler like the sweat on a pitcher of cold water in the summer time. As we look the space is beginning to fill with vapor; the vapor becomes very dense; but after awhile as the fire grows hotter this vapor disappears; the sweat begins to disappear; finally the space above the water is quite clear again, and looks like it did before the fire was started. But look at the water; do you see those bubbles coming to the surface of the water, burst and disappear? Yes; what are they? They are bubbles of hot air and each carry with them small particles of water. The water contains air and the heat from the fire passing through the boiler into the water makes this air hot and it gathers together in little bubbles which fly upward. When these bubbles come to the surface of the water they burst, and the hot particles fly out among the other particles of air, but lose the water they contained because the cold in the air as yet condenses the moisture; but the heat is disseminated and after awhile the air above the boiler becomes hot and capable of retaining moisture.

As the fire grows hotter and the heat within the boiler becomes more intense, the water bubbles and boils, spouts and rushes around hither and yon like the mad currents of the maelstrom. All this time huge volumes of heat are passing into the boiler from the fire. No water, steam, nor air escape from the boiler. The water is the medium which contains the heat; it contains it and holds it in solution (this is not a correct word but it conveys my meaning) just as truly as does the glass of water a spoonful of sugar. The water line is not lowered; instead of being lowered it is somewhat higher than before, owing to the heat expanding it. But you cannot see anything more in the boiler now than when the fire was built; but since there is nothing visible in the space above the boiling water don't think that nothing is there. What is there, you ask; steam. What is steam? Steam is heat held in solution by water. What is heat? Heat is motion. Under pressure a small volume of water will contain many thousand times its volume of heat. The steam gauge on this boiler now registers 140 lbs. Could

the entire pressure be removed instantly from that water in the boiler it would suddenly expand into steam and disappear before our very eyes. What would perform this wonder? Why, the immense volume of heat contained in the water. Very well; the steam gauge now registers "popping" point. We will knock the fire; the supply of heat is removed and no more passes into the boiler. It is passing out of the boiler, radiating as it is called. You can see it going off in wave like motions. You can see a great quantity of heat when it is in motion, otherwise it is invisible. You can see steam when it is in motion, but it is invisible when at rest. But keep in mind that every degree of heat which passes from that water out of the boiler had first to pass through the boiler into the water. It took nothing in with it, and, according to the proposition, it takes nothing out with it. Now the boiler has become cold enough to condense the steam and it fills the space above the water like a dense cloud. From a pure white color it turns light gray; from light gray to a dull blue; finally the vapor disappears and leaves a film and sweat of water on the inside of the boiler. Finally these all trickle down and (if the water was perfectly pure) the glass becomes clear.

What is in the boiler? Water and air. It was there all the time, only in a little different condition. Where is the vacuum, or partial vacuum? There is no room for a vacuum, nor a partial vacuum; the water and air occupy all the available space. No air will have passed out, nor a particle of the water; the only thing that has made any change is the heat, and that was passed into the boiler, making a physical change upon the water therein, but as it again passed out as it went in and took nothing out with it, and everything returned to the same form as before the heat affected it, there is no vacuum nor nothing else in the boiler, more nor less than what was there at first.

But you can cause a vacuum in the boiler. Suppose, when the gauge registered 140 lbs., instead of knocking the fire and allowing the boiler and water to cool gradually, that the temperature of the water and boiler could be reduced instantly to 20° below zero, and that the structure of the boiler was such as to resist the tremendous strain of such a sudden change. The steam would fly to the sides of the boiler and form a solid crust of ice, the water would be frozen; the air would be reduced to an exceedingly small volume and there would be plenty of room for a vacuum, and a vacuum as perfect as vacuums generally become would exist within the boiler until sufficient air could percolate into the boiler through the pores of the glass to fill the vacancy.

I would now like to discuss the subject of

momentum as propounded in the January *Magazine*. In discussing the subject I will differ with "Vulcan" and with "A Philadelphian," but I believe I can convert both to my way of looking at it. "A Philadelphian" is right in his definition of the term momentum and also how to find the momentum of a moving body, but when he states and solves the problem concerning the ship, and asks and states "with what momentum did she strike," he is getting the terms *momentum*, *energy* and *living force* and force of impact mixed. He could ask the question "what was the momentum of the ship when she struck," and his answer would be correct, that is, he would demonstrate his definition of momentum as stated at the beginning of the article, and 7,875,436 would represent "its (the ship's) quantity of motion." So it will readily be seen that "A Philadelphian's" definition of momentum and his method of calculating it are correct, but his question instead of being "with what momentum did she strike," should be "what was her momentum when she struck."

To make the matter more plain I shall endeavor at some future time to submit a discussion on the subjects of Energy, *Via Viva*, or living force, and the Force of Impact, which are closely related to momentum and to each other, and which will be of interest to all those engaged in operating transporting machinery.

Will some one please tell me how to find the horse power of a locomotive having 140 lbs. steam pressure, with 18x24 cylinders? I would also like to know how to compute the volume of steam which may be made from any given volume of water, and how many degrees of heat it would require in making the change? I would also like to know whether the formation of steam is caused by a physical or a chemical change in the water, and what is a physical change, and a chemical change?

Lewis H. Evans.

THE space that a body will fall through in one second is sixteen feet one inch. Remembering this quantity, it is easy to find how far a body will fall in any given time. In the first second it falls one time this quantity, in the second second three times; in the third second five times, etc. In other words, multiply sixteen feet one inch (16.083 feet) by one of the odd numbers, 1, 3, 5, 7, 9, etc. This is not the whole space fallen through in the given second. The whole space may be found by adding the whole together, or better yet, by multiplying the square of the time by 16.083. Thus the space fallen through in five seconds would be 5 x 5 x 16.083 = 40 ft. 2 1/2 in.—*American Journal Railway Appliances*.

The above item from our valued exchange is respectfully submitted to the readers of the Mechanical Department without any other comment than the old adage, that accidents will happen in the best of families.

Friction of Locomotive Slide Valves.

At a recent meeting of the English Institution of Civil Engineers, a paper on this subject was read by Mr. J. A. F. Aspinall, in which he stated that only scanty data existed as to the friction of slide valves, and that the few experiments which had been made were not of a very satisfactory character. Hence he was led to design an apparatus for graphically recording the force required to move slide valves during the whole of their travel. The apparatus consisted of a small hydraulic cylinder and piston, which was made to form part of the valve link. An ordinary steam-engine indicator was screwed on to one end of this cylinder, and an air valve was placed on the other. For pulling, the indicator was on one end of the hydraulic cylinder. For pushing, it was placed on the other end. A second indicator on the valve-chest gave a simultaneous diagram of the pressures on the back of the valve. The pressure on one side of the hydraulic piston being atmospheric pressure, that shown by the indicator at the other end was the force required to move the slide valve, less any friction of the apparatus. The author described the experiments made to determine the friction. The results showed that the relation between the pull or the push on the valve, and the pressures recorded by the indicator, could be expressed by a simple linear equation:

$$L_1 = 5.6 + 11.26 L.$$

where L_1 was the pressure due to the force required to move the valve, and L the pressure shown by the indicator. The results of experiments with the apparatus on an ordinary brass valve, a brass Allen valve, and a cast iron valve, were then given, both with the link in full forward gear and with the link notched up. A small excess of the pushing pressures over the pulling pressures was shown to be due to the steam pressure on the back end of the spindle. Samples of the diagrams and calculations were submitted. As the valve resistance was not uniform throughout the stroke, the causes of variation were discussed. These were the variation of pressure on the back of the valve, the variation of pressure on the face of the valve, the variation of pressure in the exhaust space, and the inertia of the parts in motion. As the most convenient measure of the valve resistance, the author took, not the mean resistance of the valve, but the resistance at midstroke, and he compared his results with the few experiments previously made. The author's results made the valve resistance considerably less than it had been supposed from previous experiments. He found the resistance of a valve in motion, with 127 lbs. to 139 lbs. pressure on the back, to range from 982 lbs. to 1,321 lbs. The valve was 16½ in. by 10 in. Taking one case, the total load on the back of the valve was 22,110 lbs.; the relieving pressure on one steam port, 1,800 lbs.; the relief due to steam in the valve passage, 980 lbs.; and the relief pressure on the exhaust area, zero. Hence the resultant load was 19,330 lbs. The force necessary to move the valve was 1,321 lbs.; the coefficient of friction was therefore 0.008. Similar calculations for two other valves gave coefficients of friction of 0.004 and 0.051. The lowness of the coefficient of friction was remarkable, especially as the temperature of the surface must be about 350° Fahrenheit. The author calculated the percentage of power lost in slide valve friction at 1.34 to 2.26.

The above, from the *Engineering Journal*, gives the result of some interesting experiments to determine the amount of power lost by the friction of locomotive slide valves. It will be noticed that the total load supposed to be on the valve was 22,110 lbs., that after the counteracting pressures were deducted, it still left 19,330 lbs. on the valve. The force necessary to move the valve is

said to be 1,324 lbs. If a pull of 1,321 could overcome the friction, imposed by a load of over 19,000 lbs., the surface must have been well lubricated and in good condition, and hence the result arrived at, that only from 1.34 to 2.26 per cent. of power is lost in moving the valve, is far less than the actual loss in practice. All engineers know that there is a big difference between the resistance offered by a valve which has just been lubricated, or is being supplied by a feeding device, and one which can only be reached with oil when steam is shut off, and which will get a dose every ten or twelve miles. It has appeared to me in actual practice that instead of a difference of a car or two in a hundred, as in the above, that five to eight cars more per hundred could be pulled, provided that pressure was taken from the back of the valve, or a proper amount and kind of lubricant furnished to keep the valves intact.

MARION, IOWA, March 6, 1889.

MR. EDITOR—In your March issue "Brick Arch" gives us some of his ideas on running locomotives with full throttle and short cut off. My short experience as a locomotive fireman has taught me to prefer the man who uses the full throttle and short cut off with steam of high pressure. There are a great many advantages resulting from doing so. By using full throttle the steam reaches the cylinder at boiler pressure, and by cutting off short it works more by expansion so consequently less steam is used, less water boiled, and less coal burned. I admit that there are some difficulties in using steam of high pressure, running with throttle wide open, and regulating the speed with the reverse lever alone. In the first place the link motion is not effective in cutting off at at less than one quarter of the stroke because the openings of the steam ports are then so small that the steam which is admitted to the cylinder is very much wire-drawn, and again with engines having small boilers if steam is cut off very short, when the release occurs it does not cause sufficient draft to stimulate the fire to make enough steam. In such a case it would be necessary to drop the reverse lever down and regulate the speed with the throttle, and also with a light train on a level track perhaps the speed would be too great with throttle wide open so that it would be necessary to partly close it in order to reduce the speed, but with engines having large boilers, pulling heavy trains, give me the man who runs with throttle wide open, and steam cut off as short as possible.

F. T.

—♦—
THE Old Colony Railroad Co. will complete their shops at Braintree, Mass., early in the summer. They will expend \$200,000 in building the shops.

Meeting of the Master Mechanics.

The Master Mechanics of the various railways of the country, are, confessedly, very important officials, and the sayings and doings of the American Railway Master Mechanic's Association are well calculated to attract wide attention. The next meeting of the Association will be held at Niagara Falls, June 18th, with headquarters at the International Hotel. We notice by circulars on our table that special consideration will be given to the "best method and material to prevent radiation of heat in boiler covering," and replies will be read and discussed upon the following questions:

1. What form of boiler covering do you consider best to use?
2. Give your reasons for the preference.
3. If you use asbestos or other composite covering, please say how it compares with wood in first cost and in cost of maintenance.
4. Do you find that composite covering causes corrosion of sheets or of jacketing?
5. Do you find that composite covering inconveniently interferes with the examination of boilers?
6. What is your manner of putting on composite covering?
7. Please give your estimate of the comparative value of wood and composite boiler covering as preventive of heat radiation.
8. Please give any other information you may have concerning different forms of boiler covering.

Among the matters that will come before the Association, questions relating to "driver-brakes, etc.," will have special prominence, as follows:

1. How many locomotives of each class, viz., passenger, freight and switching are equipped with driver-brakes on the railroad with which you are connected?
2. Of the above, state in detail how many are operated by compressed air, by vacuum and by steam? Which gives the best results, and why?
3. Give in detail the number of engines of each class equipped with each style of brake, viz., the Spread, the Pull and the Clasp. Which gives the best results, and why?
4. Are brake-shoes applied to *all* the driving-wheels? If not, please say in what respect and to what extent deviation from this practice is followed, and if unsatisfactory wear of tires has resulted.
5. From your experience, under what circumstances do you recommend the use of the driver-brake in conjunction with train brake? Do you consider the driver-brake should be used in making every stop, or for emergencies only?
6. Do you consider the braking of engine truck wheels to be of sufficient importance to warrant the additional cost of equipment and maintenance?
7. With what different brake-shoes have you had experience? Which do you recommend, and why? Please send drawing of same.
8. Please give results of experiments, if you have made any, showing the relative endurance of various kinds of brake-shoes, under similar conditions, also the effect of same on tires.
9. What ratio do you recommend between pressure of brake-shoe on tire and pressure of tire on rail?
10. What ratio do you recommend between pressure in pounds on each brake-shoe and the number of square inches of shoe in frictional contact with the tire?
11. How many engines of each class are there on your railroad equipped with the water-brake?
12. What is average cost of necessary materi-

al and labor fitting up this brake? Please supply blue print showing general arrangement of same.

13. Under what circumstances do you recommend the use of this device?

14. Has any unsatisfactory effects upon machinery resulted from use of this brake? And if so, how can they be obviated?

15. If you can give other information bearing on this subject, you are respectfully requested to give the benefit of the same to the undersigned.

Locomotive firemen, necessarily, take an active interest in the brake question, and by being informed as to the scope of the discussions upon the subject, will be interested in what the Master Mechanics have to say. Another important part of the programme is the "best proportion of flue and grate area in locomotives," and the following questions referring "to boilers using bituminous coal," will be of special interest to firemen:

1. Have you, in renewing boiler tube plates, or in building a series of new boilers, altered the number or size of flues, or altered the clearance space between them, without altering the length of flue or altering any other part of the boiler or engine?

If so, can you give comparative results, either fuel consumed for work done or in water evaporated, stating the exact change or variation you made which produced such results? This information should be given in answering any of the questions; and in quoting results, endeavor to distinguish between higher evaporative power ("free steaming") and increased economy in evaporation (more water boiled off per pound of fuel).

2. Have you made any such change keeping the flue-heating surface the same in total amount but putting in flues of larger diameter, so as to increase the gas opening through the flues; or made any such change, still keeping the flue-heating surface the same, but putting in flues of smaller diameter, thus decreasing the gas opening through the flues?

3. Have you made any such changes, either shortening or lengthening the flues, but keeping the total flue-heating surface the same?

4. Do you know of any instance in which reducing the flue-heating surface, or reducing the gas opening through the flues, increased in any way the efficiency of the boiler?

5. Have you made any changes in the amount of grate surface without altering the boiler or engine at any other point? If so, with what result? If you have knowledge of any experiments of this kind carried out on other than locomotive boilers, kindly quote them also.

6. In designing or ordering locomotives, do you proportion the amount of grate surface simply to suit the quality of coal likely to be used, or do you believe—if the boiler is to be in its most effective condition—that the grate surface should bear some definite proportion to the flue-heating surface, or to the gas opening through the flues? If you proportion, give the ratios you use, or would like to use.

7. Is it possible, within the narrow limits of deviation allowed in an ordinary locomotive, to give a boiler too large a grate surface?

A grate may be too long for a fireman to equally cover it with coal, or it may have too much air opening through it to suit certain qualities of fuel; but these points are not properly to be taken into a consideration of the question of absolute grate surface.

8. If to use a certain quality of fuel you have found it necessary to put at one end of the grate a solid "dead plate" or "drop plate," has such reduction of the effective grate area lessened the evaporative power or the economical efficiency of the boiler? In answering question 8, a note should be made as to whether, in making the

change, the clearance between the firebars (air space) was altered.

9. Have you in way improved a boiler by reducing the total grate surface, all other points remaining unchanged?

10. Are you familiar with any experiments tending to show that rapid combustion is, for steam purposes, more economical than slow combustion? If so, quote or refer to them, and say if you think the result is due to the higher temperature (commonly believed to accompany rapid combustion) transmitting a larger portion of its heat through the metal or to a more thorough burning of the fuel?

This matter has a close bearing on the whole subject, for, other things being equal, the smaller the grate the more rapid is the combustion.

11. What is the present limit, in locomotive practice, to the number of pounds of good clean coal that can be fully burnt per hour per square foot of grate surface?

12. Are there any facts from which it may be reasonably inferred that this limit will in the near future be exceeded?

13. How many pounds of water (from and at 212°) will one pound of good coal evaporate when the grate is thus working up to its highest limit?

14. What is the minimum amount of fine surface per square foot of grate that will do this high duty?

Locomotive firemen, by virtue of their calling, are brought into close relations with Master Mechanics, and, as the mechanical department of the *Magazine* fully demonstrates, locomotive firemen are becoming, more than ever before, students of the machine, and the questions which specially engage the attention of Master Mechanics, must be those in which firemen will take special interest. We shall watch the deliberations of the Master Mechanics in convention, and hope to be able to present to our readers much valuable information when the proceedings of the convention come to hand.

PHILADELPHIA, March 13, 1889.

MR. EDITOR:—In reference to finding the pressure of a cylinder 15x22 inches, engine carrying 130 pounds pressure indicated on steam gauge, I have the following rule given me by a civil engineer: "Diameter of cylinder multiplied by diameter of cylinder, or, in other words, the square of the diameter multiplied by .7854 multiplied by pounds pressure on steam gauge of boiler." Thirteen to fifteen per cent. is generally allowed for loose fittings, etc. I would be very much pleased to know whether this is the right answer or not. Respectfully,

A Philadelphian.

The Locomotive.

The Rogers Locomotive Works, Paterson, N. J., are building eighteen locomotives, with 18x24-in. cylinders and 63 in. driving-wheels, for the Eastern Railroad of Minnesota.

The Richmond Machine & Locomotive Works, Richmond, Va., are building additional shops and putting in new tools with the intention of increasing their capacity for building locomotives to 100 a year.

One of the locomotives recently built for the Strong Locomotive Company is at work on the Susquehanna division of the Erie, and is reported to be doing good work in handling heavy fast passenger trains with economy and dispatch.

Our Taunton (Mass.) correspondent was in error last week in writing that the Mason Machine Works were building narrow gauge engines for the Revere Beach railroad. These engines are being built by the Taunton Locomotive Manufacturing Company.

The Cooke Locomotive Works in Paterson, N. J., being unable to secure additional room on the site at present occupied, have purchased land in a much more convenient location, adjoining the Erie tracks in Paterson, where they are now erecting extensive and well-arranged buildings for their shops.

President Clark, of the New York, New Haven & Hartford, is reported to have awarded the contract for building ten 1½ in. cylinder and 24-in. stroke passenger and freight engines to the Rhode Island Locomotive Works. Plans will be furnished by Mr. John Henney, superintendent of motive power for the road.

Small compound locomotives are to be used for hauling freight to the Paris Exposition of 1889. M. Decauville, the builder of portable railway plant and equipment, has issued a circular stating that there will be about 12½ miles of track of 22.68 inches gauge, laid with rails weighing about 14 and 20 pounds per yard. The cars will be hauled by compound engines, weighing 9½ tons empty and 12 tons in working order. Over these lines will be transported the 40-ton guns which are to be exhibited by the Minister of Marine. The track will be of the Decauville system, the steel rails being riveted to steel cross-ties. A part at least of the line will be laid with the "portable" track.

During 1888 the Baldwin Locomotive Works, Philadelphia, largely exceeded any previous yearly output, the number of locomotives built being 737. Of these, two were of special types, one being a handsome locomotive and car combined for the government of Nicaragua, and one a rack-rail locomotive for a Brazilian railroad. Of these engines 188 had two pairs of driving-wheels connected, 275 had three pairs of driving-wheels coupled, and 272 were of the consolidated type, with four pairs of coupled wheels. The latter included two locomotives with 21x26-in. cylinders and twenty-one with 22x28-in. cylinders. In all ninety-three locomotives were exported to the following countries: Australia, Brazil, Canada, Central America, Cuba, Ecuador, Mexico, and New Zealand.

The Schenectady Locomotive Works furnished the following table showing the locomotives built by them in 1888:

Cylinders.	8 wheel.	10 wheel.	12 wheel.	Consolidation.	Switch, 6-wheel.	Switch, 4-wheel.
14 in.	1
15 in.	2
16 in.	10
17 in.	8	10	..
18 in.	81	94	10	..
19 in.	40	4	..
20 in.	13	20
Totals	89	134	13	10	42	13

This is a total of 301 locomotives, the largest output ever made by these works in one year. The large proportion of heavy engines is noticeable. The average weight of these 301 engines, exclusive of tender, was 98,000 pounds. The works now employ about 1,500 men.

Bridge and Iron.

The Eiffel tower, now being erected at the entrance of the Exposition grounds at Paris, is to be, when finished, 951 feet high.

The Phoenix Bridge Company recently completed a heavy iron bridge over Germantown avenue, Philadelphia, for the Philadelphia & Reading railroad.

The railways of the United States, if placed continuously, would reach more than half way to the moon. Their bridges would reach from New York to Liverpool.

The St. Louis Bridge and Iron Company, has recently taken several contracts for highway bridges, including one of 120 feet span over Loutre Creek, in Montgomery County, Mo.

The tracks of the Reading road are equipped with a 30 pound rail, the Pennsylvania with one of 85 pounds, the New York Central with 80, the Erie with 76 and many others with rails of about the latter weight.

The Poughkeepsie bridge is now very nearly completed, and the first train passed over it December 20. The bridge proper and its approaches can be made ready for regular traffic in a very few days, and it now only waits the completion of its connecting lines to come into full use. The live west of the river has still two or three months' work to be done upon it. East of the river one connection is already made, but there is still a great deal of work to be done on the line to Brewsters, from which most of the bridge traffic is expected to come. It will probably be summer before the bridge can be considered as full opened.

The output of steel rails in the United States fell off nearly one-third from those of 1887, the total reported last year having been 1,528,657 tons against 2,290,197 in 1887. It must be remembered, however, that 1887 was an exceptionally prosperous year, when some 13,000 miles of new railroad were built, or almost twice as much as last year. The difference in new construction will account for the falling off in sales, and it is probable that the regular demand for renewals was fully as great, if not greater last year than in 1887. This, after all, the demand upon which the mills have to rely for a steady business, and that it should be well kept up is an encouraging feat of the trade.

On December 25 last the first train passed over the new Chesapeake & Ohio bridge over the Ohio river, at Cincinnati. The bridge is 5,320 feet long, and including all approaches, 17,000 feet in length. It has two spans of 490 feet each, and one of 550 feet. It is double tracked for railroad trains, has wagon and street car ways 11½ feet wide, and foot passage 5 feet wide. It is calculated to bear the following strain: Two consolidation engines and tenders, with 14-foot base, weighing each 101,000 pounds, coupled, on each track, followed by a uniform weight of 2,500 pounds per lineal foot for the entire length of the structure; the concentrated weight of 10,000 pounds on 10 feet of each wagon way, followed by a uniform weight for the whole length of 80 pounds to the square foot, or about 900 pounds to the lineal foot; on each foot way 500 pounds per lineal foot from end to end. A wind pressure of 30 pounds to the square foot on the entire surface, including cars has been provided for. The total cost of the structure, including real estate, was a little over \$5,000,000. Ground was broken for the first caisson in June, 1887, and work in iron was begun in March, 1888. The bridge was built by the Phoenix Bridge Company, and, according to the Cincinnati Gazette, from which this account is condensed, the other contractors were, for the pneumatic work, Scoy Smith & Co., of New York; and for the masonry, Mason, Hodge & Co., Frankfort, Ky. Superintendent Ephes Randolph has had general supervision for the constructing company, with Captain A. H. Sawyer as Resident Engineer. For the bridge company's work Engineer J. S. Deans has been responsible, with General Foreman A. B. Millekin as first assistant.

Rolling Stock.

The Georgia Pacific Railroad will build a car shop at Birmingham, Ala.

The Talladega & Coosa Valley Railroad Co. will build a repair shop at Talledega, Ala.

The Kentucky Central Railroad Co. will build new shops, probably at Lexington, Ky.

The Southern Pacific Railroad Co. contemplate building repair shops at El Paso, Texas.

The South Baltimore Car Works, Baltimore, Md., are building a foundry 84,220 feet. The foundry is to be used for making car wheels.

According to most trustworthy reports, the cost of car repairs is now about 10 per cent. of the whole operating expense of all railways.

The vestibule train on the Northwestern line, between Minneapolis, St. Paul and Chicago, is said to be the handsomest train in the world.

Receiver McNulta, of the Wabash road, has leased agricultural works at Springfield, Ill., which, it is stated, will be converted into a car building and repairing shop.

The Standard Car Company has been organized in Bridgeport, Conn. to build, repair and deal in real railroad equipment. The capital stock is \$10,000. Goodwin Stoddard is President.

There is unusual activity among the manufacturers of iron and steel cars, and it is estimated that the whole movement of coal on some roads could be made in iron cars at about two-thirds of the expense incurred in using the ordinary cars.

The South Baltimore Car Works are building for the Baltimore & Ohio Railroad 200 gondola cars, thirty-four feet long, and 50,000 pounds capacity. They will have the American continuous draw-bar. John B. McDonald has been chosen President of these works.

The Beal's Brake Company, of New York, has recently been reorganized. The newly elected officers are: President, T. B. Atkins; Secretary and Treasurer, R. W. Gilbert; Directors, W. D. Ellis, Jr. Cochran and H. B. Hammond. Mr. James Howard is retained as General Manager of the new company.

The Burton Stock Car Company are very busy. Among their recent orders are a number of their improved stock cars 36 feet long for the Chicago, Rock Island & Pacific R. R., and they are also building 20 horse cars 41 feet long, with Monitor roofs, Miller platforms and M. C. B. standard trucks and equipped with air brakes. Their plant at Wichita, Kan., covers twenty-seven acres, and they employ 300 men.

The American Railway Equipment Company has been incorporated in New York for the manufacture of the Stearns patent car box and other standard improvements. The incorporators are O. S. Burr, George G. Saxe, A. S. Hatch, Thomas R. White, Jr., O. S. Stearns, Herbert S. Ogden and Hon. Wm. Fullerton. O. S. Burr, President; A. S. Hatch, Vice-President and Treasurer; Thomas R. White, Jr., Secretary. The capital is \$1,000,000.

The Dunham Manufacturing Company, Boston, has made sales of its storm-proof car door recently to the Cleveland, Columbus, Cincinnati & Indianapolis, the Wabash Western, the New Jersey Central, the Union Pacific, and the Milwaukee, Lake Shore & Western roads. The same company reports recent sales of its Globe ventilator to the Boston & Albany, the New York Central, the Memphis & Charleston, and Pullman's Palace Car Company.

The St. Charles Car Company, St. Charles, Mo., did a business in 1888 of the value of \$2,200,000, and expended \$1,000,000 in improvements. Besides the passenger coaches and the 3,129 freight cars turned out, 3,000 car wheels were moulded and 100,000 tons of cast and wrought-iron work completed. The company employed 900 men, and the average weekly payroll amounted to \$7,500. The company intend increasing their capital stock \$1,000,000 for the purpose of raising money to build new shops.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
Matthy House, Washington, D. C.

NOTES FROM WASHINGTON.

From all that I have seen and heard in Washington during the past six weeks, I hardly know what to select that would be of the most interest to the readers of the *Magazine*. When this reaches you the inauguration will be an old story, the great change of government will have been accomplished without a jar and the wheels will still be moving round without friction or loss of motion. But now, as I write, the city is alive with preparations for the great event. Up and down the long avenue, where the grand parade will pass, workmen are busy with saw and hammer putting up seats for the thousands of spectators. The hotels are filled with cots, every available inch of sleeping room is being utilized and all is bustle and activity. People are pouring in from all parts of the country, the streets are filled with carriages and blocked with pedestrians and the whole scene is one of gaiety, animation and expectancy.

Washington is very beautiful, with its many miles of solid, asphalt streets, lined with blocks of stately houses and so delightfully clean that the snowy draperies of the windows and the delicate colors of carpets and upholstery are a joy forever. The great public buildings are of white marble and, with commendable wisdom, the founders of the city placed them long distances apart and in various quarters of the city so that it should be built up in all directions. Over every building where government business is transacted floats the United States flag and wherever one looks, outlined against the blue sky, streams this beautiful emblem of freedom. Every morning this winter the first object upon which my eyes have rested has been the magnificent Capitol, from which I am separated only by a narrow park. Day after day when I have had an hour of leisure I have wandered through its broad corridors, studied the sculpture and paintings, watched the never-ending throng of people or sat in the galleries and listened to the debates which decided the affairs of the nation.

Whatever one's taste, he may gratify it in Washington; here, in the highest degree, are literature, art, music, the drama, society, politics. I have attended the President's card-receptions, the cabinet parties, the lit-

erary clubs, the musicales, the art exhibits, the conservatories, have inspected the various departments, gone to Mt. Vernon and been to the top of the monument. What a place for sight-seeing! There is no end to it, and when one attempts to write it up the task is herculean. This afternoon we went out to the barracks and listened to a concert by the famous Marine band, one of the finest in the world. Afterwards we went through the navy yard and on board the ships, saw them making cannon and shells, and visited the museum where may be seen every kind of war like weapon, from the old flint-lock musket to the latest improved Springfield rifle, from the cannon used by Cortez, in 1493, to the Gatling gun which fires 800 rounds a minute.

With a party of ladies I called on Mrs. Cleveland and remained an hour. By the time these lines are read she will no longer be the "first lady in the land," but she will still be one of the sweetest and loveliest of women. However harshly the public may criticise Mr. Cleveland, there can be but one sentiment regarding his wife, that she has borne her honors modestly and gracefully and has sustained the dignity of her position with noble graciousness. There are very few women so young and inexperienced, lifted suddenly into so exalted a station, with the eyes of the world upon them, who could have discharged the trying duties with such universal praise and approval. All of her sex have reason to feel a pride in her and it is a pleasure to offer this imperfect tribute to her lovely character and peerless womanhood.

There are many handsome houses in Washington but very few attractive homes. Indeed the city is wanting in genuine home life. There is so much to consume the time, so much to distract the attention, people are almost inevitably drawn into the vortex of society, there is so great a struggle to meet the demands for money, that all these combined destroy the peace and quiet essential to a calm and happy home. With so many outside attractions, an evening alone with one's own family, by one's own fireside seems dull and tiresome and becomes the exception and not the rule. This is one reason out of many why this city is not desirable as a permanent place of residence.

Among the many queer characters here none is more widely known than Dr. Mary Walker. My first desire whenever I see her is to go down on my knees and say in supplication, "O, Mary, take off those pantaloon!" Why will she wear the ungainly, uncomfortable, undesirable things? But she does, and a man's shirt and vest and coat and boots and overcoat and silk hat. She is a slim, little body, with her hair cut short, but as far as you can see the figure you can tell that it is a woman. "O, yes, she is good

for nothing but to hang around woman suffrage conventions," said a member of Congress with whom I was talking as she passed. Ay, there's the rub. Dr. Mary hates the equal suffragists, utterly disapproves and condemns their principles, and they repudiate her from top to toe. She never attends their meetings or is recognized by them in any way. She was a faithful and efficient nurse during the war, she is a good citizen, there is not a blemish on her character. And yet she has done more to injure the cause of woman's progress than can ever be estimated, by her unwise attempt to break down that necessary barrier for mutual protection which is afforded by a distinctive dress for each sex.

With the feeling that I am trespassing on space I must hasten to close this letter. How little one can say in these short columns. I have been particularly interested in "Women in the Departments," of whom there are several thousands, and at some future time hope to write my impressions. With so many entertaining subjects at hand, there is but one thing to do and that is to stop.

This week four territories were admitted into statehood and unfortunately Washington came in deprived of woman suffrage. There was a strong disposition in the Senate to ignore the recent action of the Supreme Court in that territory and recognize the right of women to vote, twenty-two Senators signing a petition to that effect, but there was so much danger of its delaying the passage of the bill that it was abandoned.

"H. B. H.," St. Louis: The poem was not enclosed in quotation marks and no credit given. We would like to publish it entire, as it is timely and excellent, but it would require more space than we can spare, as you will see from the crowded condition of our columns.

The Senate Committee on Woman Suffrage this week reported in favor of a sixteenth amendment enfranchising women, but in the tremendous rush at the close of the session, it is not probable that it will reach a vote in this Congress.

"M. E. C." a fireman's sister, of Brightwood, Ind., writes very cordially of Lodge No. 14, and urges its members to make themselves heard more frequently through the columns of the *Magazine*.

ANOTHER "Fireman's Sister," from Lindsay, Ont., writes in complimentary terms of J. Scott Lodge, No. 136. She expresses a wish to hear from Red River Lodge.

LIFE'S STREAM.

Life seems to me like a flowing stream. As we launch our boats at the head of that stream little do we think of the many rocks and whirlpools that we are to come in contact with, and unless we guide our boat clear of those rocks we will be eternal wrecks before we reach our destination. Yes, we go sailing down the chasm of life almost forgetful that it has a destination, and beware of those little streams that lead out to unknown courses. The one leads to everlasting life, the others go plunging o'er the dark stream to eternal death. Now, which way are we going to choose? That broad and smoothly flowing stream or that which flows over the jagged rocks? That broad and rapid one has many temptations to lure us onward, and the farther we go the swifter the current propels us. Are we going to let our boat be carried downward by the natural current, man's gratifications, or are we going to apply the oars and steer for the shore of safety? Now, many have already gone over that dark chasm and when near its awful brink only then do they realize their situation. But ah, too late, they have got within the current where no man can ever turn aside. So take a lesson, my reader, as you sail down that stream where the water is smooth, keep near the shore while yet you have an opportunity to reach it, for you will surely go within that current where you are hurried to destruction. And yet along this stream think back how often some one has held out a branch of everlasting life to us and we would not grasp it. We think the journey long, and it will be yet time to cast our anchor on solid grounds, but how often, when we make an effort to cast it in those turbid waters, do we find nothing but sand and not the solid bottom that we expected. Now, my friend, stop and think how far down that stream you have already gone. When you look back does your course look straight, or have you entered those many little inlets that lead you astray? Or have you already heard that almighty roar of the awful cataract, or are you upon smooth waters? Think of the situation ere it is too late. For every stream, however small, leads out into the ocean, and once upon it we are lost forever without a life boat good and strong. That boat is the one we have called the smaller streams, upon which we must be carried to the deeper waters. Stop and examine and see if it will stand the waves that will toss it about while yet you may, for once upon those deep waters it is too late to cast anchor. Ah, how many are out upon deep waters to-day without even a boat, even a hope to cling to. How often we look up that stream on which we came our long journey and say, Oh, how I wish I had chosen the right course while yet among the smaller streams, and built my boat good and strong to ride through this stormy life without a trouble, without a strife. This is a journey we all must take. To some it may be long, to others short, but if you wish to reach your journey's end in safety, make preparations and choose well your course while yet you may.

A Fireman's Wife.

BINGHAMPTON, N. Y., February 6, 1889.

TEMPERANCE.

June 18 is set by the Pennsylvania Legislature for the men to vote on the prohibitory amendment.

A three years' course of study, with a system of reading for "seals," modeled upon the Chautauqua plan, is being prepared for the use of Loyal Temperance Legions by Mrs. Helen G. Rice and Miss Anna Gordon.

In forty-eight out of seventy five counties in Arkansas no licenses are granted and prohibition is well enforced. In five counties liquor is free, in the other twenty-two there are many towns which grant no license. Women vote by petition on the question of license in Arkansas.

Mrs. Miller, of Lafayette, Col., on whose farm a rich vein of fine coal has been discovered, is a public spirited woman and gives away land freely as sites for public buildings; but every lot given or sold is accompanied with the stipulation that the land shall revert to her if liquor is ever sold upon it. In this camp of a few hundred souls, she has refused \$2,000 for a lot upon which to build a saloon.

I desire to be distinctly understood that I would not spend my time and money to save those men who vote to perpetuate the soul-destroying liquor traffic, but I am glad to protect the women and children who have no vote, and who are by far the greater sufferers. Any man with a family who deliberately goes to the polls and votes to reestablish dramshops in our midst deserves the contempt of all his fellow men.—*Henry H. Faxon.*

A novel reason brought the Rev. Mr. Kempkin to New York City. He had been an active leader in the total abstinence work of Germany, and his wife had studied law in that country. She had passed the examinations very successfully, but being a woman was not allowed to practice. Her husband thereupon decided to come to the United States, where his wife would be free to use her talents. Mr. Kempkin had organized thirty-one total abstinence societies in Germany during the last year, and will be a valuable acquisition to the work for Germans in this country.

In a letter from M. A. Gault to the *Christian Statesman*, describing the present situation in Iowa, occurs this statement: "Since the Supreme Court decision that liquor may be handled in sealed packages, and that the power of regulating commerce between the States belongs solely to Congress, the State (Iowa) is flooded with liquor, and our prohibitory law is virtually nullified. One may see every day at almost every depot these boxes unloaded marked *glass*. An entire car-load was shipped to Marshalltown and sold out in a single day."

Representatives of the executive committee and of the board of superintendents of the National W. C. T. U. were in session two days last week at the headquarters of the society in Chicago. Plans for the year's work and for carrying out the decisions of the late convention in New

York City were considered. These plans involve those departments of the society's work known under the general heads of organization, prevention, evangelization, social and legal. Arrangements were made for annual appropriations to superintendents for their department work. It was determined to organize a National W. C. T. U. reading circle, to disseminate a knowledge of the principles and methods of the society. The kindergarten method of teaching and its adaptation to home training will be a special feature of the work of this reading circle. The work to be prosecuted at Washington this winter will be in the way of endeavoring to secure the passage of an amendment to the National Constitution, a bill for the protection of women, and the Blair educational bill.

What is this gracious object lesson of manhood's magnanimity fitted to teach? Much every way, but to my thinking chiefly this: Women are more to blame than men that they are so discounted in church and state to-day. A majority of men in this country and this age have so far outgrown the false notion of their own inherent right to rule over women, that if we but had the courage of conviction and that sense of dignity which ought to mark us as daughters of the Lord Almighty, men would, within a twelvemonth, seat us beside them upon the throne of government in church and state, governing the world jointly as He meant they should when "to them He gave dominion." From the day on which they were called out into the crusade work a baptism that was nothing less than "newness of life" has rested on the women of Illinois. Their very first general petition (owing to the peculiar nature of our local option laws) asked for the ballot on the license question; their second convention declared that woman ought "to have the power to close the dramshop door over against her home." They always took it as their major premise that man and women were to work on side by side, shoulder to shoulder for the prohibition of the liquor traffic, and that this meant going together to the polls. Gently, but with the persistence of gravitation, they went to men's conventions, wrote their resolutions and placed them in the hands of some good man who was always there ready and glad to "help these women;" steadfastly they reasoned of "righteousness, temperance and judgment to come;" they utilized postoffice, press, and telegraph wire; pulpit and platform always saying "Prohibition first, woman's ballot afterward;" both are parts of one tremendous whole; what God hath joined together let no man put asunder." Truly, "we have what we take the most pains for," and women must be up and doing if these days they expect the cooperation and fealty of men in politics, ecclesiastical and secular. Wherever they have done this, the ruling power represented in the manhood of church and state have said, "It shall be as you wish;" wherever they have meekly kept silent or mildly yielded the ground they have found themselves left out. *Concert of action, prearrangement of plan; sweet reasonableness in debate: this is the only way in purpose, these on the part of women command not only the respect, but the brotherly good will of American men.*

Frances E. Willard.

EDUCATION.

The Lincoln *Beacon*, of Kansas, says that Fort Scott has four women on its Board of Education.

The Minister of Instruction in France has been applied to by the Japanese Government to send out to Japan two French woman teachers with university degrees to fill posts in a large girls' school. There are two English, two American and two German governesses as well.

Soldiers' wives, daughters, widows, and orphans have reason to bless that auxiliary organization of the Grand Army of the Republic, the Woman's Relief Corps. During the past year \$80,000 has been used by its numerous societies in carrying on their work of making homes for the helpless, caring for the sick, and assisting others to earn an independent living. The president of the Relief Corps is Mrs. Charity Rusk Craig, the daughter of Governor Rusk, of Wisconsin.

Mrs. Millicent Garrett Fawcett does not put much faith in the argument that women's minds are necessarily inferior because men's brains are slightly heavier. In a recent lecture, she called attention to the fact that the heaviest brain ever weighed was that of a famous naturalist, and the next heaviest that of a washer-woman who had never been remarkable for anything. The inference seems to be that there was no well established relation between brain-weight and brain-power.

The women students at Cornell are jubilant over the fact that half of the scholarships given this year were won by women. Rather curiously, too, the scholarships in question were given as prizes for the best records in mathematics, architecture, and botany, two branches at least in which the masculine mind has been held to be invincible. The examinations were impartial and the papers of the fair competitors are pronounced among the best that have ever been submitted.

The Working-Girls' club, of 401 Shawmut avenue, three years ago numbered eighteen girls, and now there are 140 connected with it. There is no fund, no annual subscribers nor honorary members. The girls pay one dollar a year, and this entitles them to all the class work. There has just been opened a school to teach girls to read. In this work the girls of the club help, and a large number of girls and women, principally of the servant classes, gladly avail themselves of the opportunity. The club girls can all read. They join the cooking, dressmaking, millinery, or singing classes, and help in all charity work; for although most of the club girls are in the factories and are poorly paid, they realize there is work to be done for the poor children. Once in two weeks, twenty of the very poor children come to the club-rooms for candy pulls, pop-corn parties and games, the club-girls entertaining them. In hopes of obtaining money to carry on the instructional work of the club, this winter a concert and course of lectures will be given at the Church of the Unity, on West Newton street. These girls should be encouraged in their work.

Of the last graduating class at Cornell University, ten per cent. were women, but those women won sixty per cent. (three out of five) of the fellowships. The subjects in which they were so successful were botany, architecture, and mathematics. President Adams, in addressing the association of Collegiate Alumnae, which met at Cornell, said that the women average a little higher than the men in the university classes.

The Chicago Woman's Club comprises many of the finest women of that city. They have undertaken various lines of usefulness. Not the least of these is an effort now making in behalf of children who do not attend school. The club has found that there are 57,391 such children in that city. The law requires twelve weeks' schooling in a year for each child of school age. The club petitioned to have the law enforced. Women know that ignorance is the foe of representative government, and they have taken the matter in hand for the sake of public welfare. New buildings will be required. Much expense and many changes will have to be made, but the Woman's Club will not leave the matter till schools are provided for all the children. Success to them!

"I see by the papers this morning," interrupted George Parsons Lathrop, "that President Cleveland thinks the newspapers are lying more now than usual." "Every public man thinks that," said O'Reilly, "but I imagine it is not true. I rather think that the gossip of which we are apt to complain is the safety-valve of our security, after all—the balance-wheel of humanity, as it were. Formerly men were afraid of the devil and of the law; now they shun public opinion and temper their actions because of that irresponsible little cuss who goes about with note book in hand photographing the world as it runs. No; newspaper gossip, while it may be overdone, is the safety of our homes and institutions, and in time what evil there is will cure itself. I am a believer in the freedom of expression and in the mission of a well-tempered press."

An anonymous writer discusses in the last *Lippincott* the subject of "old maids," in which she says that "There is a larger proportion of single women in old England than in New England, a larger proportion in New England than in the Western States. A more liberal education for women adds recruits to these ranks. According to the first alumnae catalogues of Vassar College, only one-third of its graduates had married. The more thoughtful and refined a woman becomes, the more she asks in one who would be her life long companion, the more deliberately she takes a step on which so much depends. The natural headlong impulse to love is cooled by the deliberate; cautious look ahead. And the social scientist can give us no other reasons why under the present condition of things this class must be a large one. Is it not time that it had a recognized place, and that the lives of the persons in it should be freed from everything that prevents their being healthful and true?"

DOMESTIC.

Until the end of the fifteenth century ladies pinned up their dresses, with wooden skewers, and when pins were invented they were held in high esteem as New Year's gifts.

Proud parent: "How's that for a baby?" Old Bachelor: "Well, my experience with babies is limited, but I should think this one might possibly be worth bringing up." [Struck suddenly with an idea.] "Why not try it?"

Is marriage a failure? "I should say *not*!" remarked an Oregon farmer. "Why, there's Lucindy gits up in the mornin' milks six cows, gits breakfas', starts four children to skewl, looks after the other three, feeds the hens, likewise the hogs, likewise some motherless sheep, skims, twenty pans o' milk, washes the clothes, gits dinner, et cetera, et cetera. Think I could hire anybody to dew it fur what she gits? Not much! Marriage, sir, is a success; a gret success!"

A Roman Catholic priest, the other day, who was examining a confirmation class in the south of Ireland, asked the question, "What is the sacrament of matrimony?" A little girl at the head of the class answered: "'Tis a state of torment into which souls enter to prepare them for another and a better world." "Good," said the priest, "the answer for purgatory." "Put her down to the fut of the class," counseled the curate. "Leave her alone," said the priest, "for anything you or I know to the contrary she may be perfectly right."

The Yorkshire (Eng.) *Post* has been opening its columns to a discussion of the domestic service problem, in which the servants have had their thrir say. Mrs. Alice C. Scatterd says that having questioned many women during the past two years why they did not go into domestic service, the tenor of the answers seems to agree upon four points: Removal from their own people; difficulty of meeting marriageable men of their own class; the restraint involved in the continuous work and dwelling under the employer's roof, and the fact that the wages do not allow saving enough for support in old age. The remedies suggested by Mrs. Scatterd are: Day service, coöperative housekeeping, foreign servants, and a scheme for a safe investment of earnings which shall yield a higher rate of interest than the Postal Savings Bank.

Mrs. M. N. Rogers in *The Union Signal* of 1888 said in regard to keeping boys at home evenings that the whole philosophy of the thing lies in keeping the mind busy at work or play. Children are restless and must be employed to be contented. Let parents plan to give themselves wholly to their children two or three evenings in a week. Invite their playmates to spend the evening with them, and find out whether or not they are the boys you would have your sons associate with. Have games, such as authors, checkers, the menagerie, the eye tests, French charades, making poetry, shadow buff, par-

tomines, the moving circle, proverbs, etc. Of course parents must make out their own programme. In one family it will be charades, in another drawing, in another whistling, or popping corn, taffy pull, etc. If there is the slightest musical ability in your family, cultivate it carefully. If you can't afford a piano or organ, buy your boy a concertina or violin. The mere possession of an instrument will awaken a desire to use it. If possible let the boys have some place for a play room where they can litter as much as they please. The masculine heart delights in a den. If your boy loves bugs and bumble bees, encourage that taste and introduce him to Mother Nature by helping him make collections, and give him works on natural history, give him books to read which combine instruction with amusement, by such authors as are known to teach pure morality.

Should not husband and wife be equal partners? Both are supposed to work for the good of the home. Often the woman has the best brain for business; if she is never consulted, so much is lost to the family. Then if the husband dies, should the wife have to assume charge of affairs in total ignorance? Would it not be better that she should help plan and know about everything pertaining to their home. Also she should hold the property during her life-time the same as he would if she died. In her weakness and inability (that men prate so much about, she should have the same to help herself and family with that the man would have, and that without having to settle an estate. Many times this would keep her family together instead of breaking it up. A man and woman make a home by their united efforts; if they lose all their children by sickness, or happen to be childless, and the husband dies, the wife has one-third—the rest goes to his relatives. If she dies he has the whole. How hard do you suppose a man would work under such a law?

A little grand-daughter of Mrs. Mary A. Livermore dislikes to be made to mind. One Sunday, after some outbreak, her father got down the Bible and showed her the text, "Children, obey your parents." She looked discontented, but went on reading the chapter, while her father went up stairs. Presently she pursued him, Bible in hand, calling eagerly, "Papa! papa! It says some more. It says, 'Parents, provoke not your children to wrath,' and that is what you do to me every day!" The same little girl was lately told by her grandmother that she would have to "work like a dog when she grew up." "Why?" she asked. "Because you are very healthy and strong, and also very bright and capable," said the elder lady, "and in this world people who can do things generally have to do them." The child pondered a moment, and then said: "I don't think dogs have to work very hard. There are five of them at play out in the yard now." Afterwards, whenever she met a woman carrying a lap-dog, she would nudge her grandmother and say, "Grandma! grandma! There's a dog that does not have to work hard."

INDUSTRIES.

Australian ladies are taking up silk culture with good success.

From January 1, 1888, to July 1, 1888, sixty-six patents were issued to women.

Mrs. Isaac A. Murchison is reported as being the second woman in North Carolina to be licensed to practice law.

Mrs. Ira McLain has been awarded the government contract for running twenty-three mail routes in Dakota for the next four years.

It is said that there are over five hundred firms in New York City employing from one to two hundred girls and women in making neck ties.

Dr. Sargent is a young lady physician from St. Louis, who has charge of the Maternity Home of the Woman's Homœopathic Hospital in Philadelphia.

The "Emma Lazarus Working Girl's Club" is a society recently organized in New York City among Jewish girls. It already has over eighty members.

Harriet Hosmer first introduced the permanent magnet as a motive power; and Elizabeth Smith, a New Jersey woman, patented a mower and reaper.

There are nearly two hundred type writer girls in the city of Minneapolis, Minn. They are employed mostly by wholesale houses, in law offices and in the offices of manufacturing establishments.

Mrs. Martha Strickland, Detroit's woman lawyer, argued a motion in a divorce suit recently, before the Supreme Court of Michigan. This is the first time that a woman ever appealed to that tribunal in the capacity of an attorney.—*Queen Bee*.

Mrs. Margaret Parker, a Scotch lady, at present stopping at Wright's, Santa Clara County, is interesting herself in the solution of the problem of domestic labor on this Coast in order to supply care-worn women of family thoroughly trained female help who shall be temperate, honest and willing to work.

Miss Sarah S. Schermerhorn is a Southern girl, having been educated and living in New Orleans and the South, but who is a practical newspaper girl also. She is now in Cincinnati with the Cincinnati *Telegram*. She is also an expert stenographer. She reported campaign speeches for different papers during the summer.

In 1886 Messrs. Fuller and Warren, of Boston offered two thousand dollars in prizes for the three best wall paper designs. Miss Wheeler and her mother took the first two, and their pupil, a Miss Clark, the other. Two hundred and sixty designs were brought into this competition, seventy being sent from Germany, France and England.

Mademoiselle Caroline Schultze, the young Polish lady whose thesis, presented to the Paris Medical Faculty, has made such a stir, is only twenty-one. She is said to be the youngest can-

didate for the degree of doctor who ever appeared before the Faculty of Paris. The subject of her thesis was "The Woman Physician of the Nineteenth Century."

The *Cabinet Maker* is a new class-journal published at Indianapolis by Messrs' Reeves and Kelley, and is well edited by Mrs. S. West. Miller. This is one of the instances which shows that women can occupy unique positions. The journal represents mechanical interests, and Mrs. Miller evinces that ready talent for combining the practical and artistic in a most readable form.

In Russia, a country which is generally regarded as steeped in barbarism, an Imperial Ukase has empowered women to study pharmacy. In Sweden the postal and telegraphic services have been open to women for the last quarter of a century, and since 1871 they have had access to the Universities, and to the study and practice of medicine. In Austria the government has given a grant towards the training of women as apothecaries and chemists.

The advance of woman in education in the industries and professions, and in a general recognition of her own worth and responsibility, indicates that we are pushing forward to the time when women will receive equal wages for the same work and have an equal chance for the honors when there are any; when no law on the statute book shall teach her inferiority in the marriage relation or in the state, and when no minister shall preach her subjection, and no editor shall dream of furnishing "Honey for the Ladies." In short, when the world will agree with Robert Browning that in designating classes and characteristics of people they should not be divided into men and women but on other lines.

The *Journal of Industrial Education* gives some very suggestive statistics on the relation of crime to a lack of industrial education. It shows conclusively by figures taken from the Eastern Penitentiary of Pennsylvania and from the Joliet prison that the criminal classes are largely fairly educated, and have mostly been Sunday school scholars, and are not wholly intemperate but that the most common generic fact among them, east and west, is that the convicts know no trade. While in round numbers four-fifths have a common-school education, nearly a tenth are college graduates, nine-tenths have been attendants in Sunday schools, and one-fourth total abstainers from intoxicating drinks; but about nine-tenths have received no industrial training. The costliness to the State of this lack of technical training aside from the diminution of industrial products may be seen from the fact that the arrests made in Chicago in the year 1886 cost that city over a million of dollars. The city of London pays a third of a million dollars annually to the support of its trade schools but its arrests for crime are in proportion to its population but five-sixteenths those of Chicago. There is nothing so costly as crime.

MISCELLANEOUS.

"Do you expect to keep Lent, Mr. Gayboy?"
 "Oh, yes, sorter half way keep it; that is, my better half keeps it."

"What a pity it is," says a city clergyman, "that there are so many sweet sinners and sour saints."

Old lady (rushing into drug store)—"Say mis-ter, I want some paint."

Obliging Clerk—"Yes'm. Face or fence?"

Irate passenger (as the train is moving off)—"Why didn't you put my luggage in as I told you, you old ———. Porter—E-h, man! yer baggage es na sic a fule as yerself'. Ye're i' the wrang train!"

They were viewing the leaning tower of Pisa.
 "What do you think of it, Ellsba?" asked Mrs. Porkchop. "Don't it strike you as bein' a little crooked?" "It's the worst out o' plumb thing I ever seen," replied Mr. P. "The contractor couldn't build a chicken-coop for me."

Old Mrs. Bentley—When d'ye s'pose Joshua, they're going to git these telegraph wires underground? Old Mr. Bentley—I dun know; I see there's a prominent telegraph official died two or three days ago, an' is to be buried to-morrer. Old Mrs. Bentley—Well, Joshua, that aint much, but it's suthin'.

Many women never rest. They seem not to understand what rest, real rest, means. To throw one's self down with a newspaper or book is not rest; it is only a change of occupation. To sit down and keep the fingers flying over some sort of fancy work, as if one were pursued by a demon of unrest is certainly not rest. But to lie in full length on a hard surface, arms extended at the sides, head back, with no pillow, eyes closed, all cares and worries dismissed, this is rest; this will smooth away wrinkles in the face and in temper; this will give an air of repose to the tired, anxious, nervous woman; this will take away many an ache, and straighten out the rounded shoulders and craned out necks.

A committee propose to celebrate at New York City, on April 30th, the inauguration of Washington as President of the United States. The day has been made a legal holiday in the state, and a fine programme has been arranged. Of course no recognition is or will likely be made of the fact that women formed half of the United States over which Washington was chosen to preside, or that the agonies and sacrifices out of which the young nation had been born had been equally shared by women. It is a matter of rejoicing that women are beginning to honor the noble of their own sex, both the living and the dead, and by long continued insistence on making prominent the woman side of our history the time will certainly come when to the popular thought the words citizens, people, nation etc., will include women as well as men.

The advance of woman into all positions of honor and profit has been fought by men with all the might of their inherited prejudices just

as is her political equality to day. In fact, he has made it just as hard for her every step of the way as his splendid masculine intellect, and the possession of the opportunity, made possible. The cruel injustice which denied to woman through all the ages, until God raised up brave women to command the modern Pharaohs to let his people go, the right of personal property, possession of their children, education, industries, of protecting themselves before the courts, of administering to the sick, of interpreting the Scripture—the denial of all these would be inexplicable were it not that men and women alike are the heirs of the barbarism of the past. Woman's weakness was man's opportunity when as yet he was nothing but a fighting animal, and so custom passed into precedent. In the progress of the race every restriction laid on woman has benumbed the conscience of man and so the burden of the age has lifted but slowly. But we rejoice that it is lifting.

It may be asserted, in a general way, that wherever in the United States you do not find dancing you find kissing. In communities where dancing was disapproved I have seen "string games" called for and carried into practice at entertainments held in school-houses, and even at church sociables. In such places church-members—and, for aught I know, deacons—take part in the amusement; and I have seen it develop a friskiness, so to speak, in grizzled men, which made them, one would say, anything but seductive or beguiling to the young and fair. Among those of earlier years kissing becomes in such communities a systematic pursuit, like hunting or fishing. Young girls whose parents object to it are neglected are disliked; a young man in such a village told a friend of mine, with some indignation, that she was the only girl in town whom he had not kissed. It is of no use to object to it as immoral where the church members are committed to it. Perhaps it can not be called immoral; but when society has reached a certain stage of refinement these games vanish. The symbol of that increased refinement is usually dancing. Dancing, whatever its drawbacks, serves practically as the antidotes to kissing games; where one begins the other dies out. They do not seem to flourish side by side; at any rate, people rarely go back from dancing to kissing. Granting, for the sake of argument, that it is necessary to have some amusement, the choice lies, in our villages and their scattered families, between these two forms of relaxation. Which is the better of the two?

Omaha Dame—It would have just been a blessing if you'd heard Mr. DeSainte lecture last night on "The Wrongs of Women."

Husband—Oh! It would!

"Yes, it would. Mr. DeSainte talked beautifully, and he said women had no rights at all; he said women to-day were as much downtrodden as ever; he said we were mere slaves, abject slaves. What do you think of that?"

"I think Mr. DeSainte is unmarried."

FRANCHISE.

It took the women suffragists of Massachusetts eleven years to secure to married women the right to their own clothes.

It is estimated that 200,000 women cast their votes at the recent municipal elections in Great Britain.

That all civilized governments are tending to the political equality of woman is evident to any one familiar with the current history of the world.

In England, single women and widows have had full municipal suffrage for eighteen years. Mr. Gladstone says they exercise it "without detriment, and with great advantage."

The Twenty-First Annual Washington Convention of the National Woman Suffrage Association was held January 21, 22 and 23, having public morning and evening sessions in the Congregational church and executive afternoon sessions in the Riggs House parlors.

At a recent joint session of the literary societies of Vanderbilt University, Nashville, Tenn., the question of woman's suffrage received a spirited discussion in the presence of a large and cultivated audience, the question being decided in favor of woman's ballot.

If I had been created a woman instead of a man, I should hate to be told, on going to the polls, that I was on a par with state prison birds and idiots; and I believe in doing unto others as I would that others should do unto me.—*Geo. R. Scott.*

ENGLAND'S Premier, Lord Salisbury, in a speech at Edinburgh, November 29, declared himself to be in favor of woman's suffrage, and the editor of the *Pall Mall Gazette*, in commenting upon the fact, said that should a bill be presented to Parliament, the *Pall Mall Gazette* would heartily support it.

NINE states will this winter petition for municipal suffrage. Ohio and New Hampshire are called upon in their constitutional conventions to amend the state constitutions by striking out the word "male" from the qualification of voters. All these facts look to the certain end—the establishment of equal political rights for women.

No wise person believes in any "reform against nature." If I believed the limitations of sex to be inconsistent with woman suffrage, I should oppose it; but I do not see why a woman cannot form political opinions by her baby's cradle, as well as her husband in his workshop, while her very love for the child commits her to an interest in good government.—*T. W. Higginson.*

It was ladies' day in the Ohio Legislature, January 18. Mr. Kennedy's bill to allow women to vote at municipal elections was under discussion. The discussion for both sides was interesting and

at times humorous. The vote upon the bill resulted in a tie which defeated it. On motion the vote to reconsider was carried, and the bill was again resuscitated and referred to the committee on Judiciary. Politically the bill was divided as follows: In the affirmative there were thirty Republicans and seven Democrats. In the negative there were fourteen Republicans and twenty-one Democrats. Thirty-four members failed to vote at all.

THE Woman's Suffrage Party State Committee profess to have advised that 2,000,000 women were registered and voted at the election last week in England, Scotland and Wales, for members of the new city councils. The Countess of Aberdeen is at the head of the wealthy, influential ladies who have united to enforce the right of their sex to resist any attempt to deprive Lady Sandhurst, Miss Jane Cobden (daughter of Richard Cobden), and the other ladies who have been elected to the councils, of their places therein on any legal pretext. The report that Lady Sandhurst will be made a member of the London Board of Aldermen is thought to have good foundation.

BUT do not misinterpret what I say into a depreciation of the work of those glorious and divinely called women who will not be understood till after they are dead—women like Susan B. Anthony, who are giving their life for the betterment of the condition of their sex. Those of you who think that women have, under the laws of this country, an equal chance with men, are ignorant of the laws. A gentleman writes me from Maryland saying: "Take the laws of this state. A man and wife start out in life full of hope in every respect; by their joint efforts, and, as is frequently the case, through the economic ideas of the wife, succeed in accumulating a fortune; but they have no children; they reach old age together, and then the husband dies. What does the law of this state do then? It says to the widow, hands off your late husband's property; do not touch it; the state will find others to whom it will give that, but you, the widow, must not touch it, only so much as will keep life within your aged body, that you may live to see those others enjoy what rightfully should be your own." And the state seeks the relatives of the deceased husband, whether they be near or far, whether they were ever heard of before or not, and transfers to them singly or collectively, the estate of the deceased husband and living widow. Now, that is a specimen of unjust laws in all the states concerning womanhood. Instead of flying off to the discussion as to whether or not the giving of the right of voting to women will correct these laws, let me say to men, be gallant enough, and fair enough, and honest enough, and righteous enough, and God-loving enough to correct these wrongs against women by your own masculine vote. Do not wait for woman suffrage to come, if it ever does come, but so far as you can touch ballot boxes, and Legislatures, and Congress, begin the reformation.—*Rev. De Witt Talmage.*

For Woman's Department.

TO-MORROW.

Ah! Who can tell what to-morrow will bring,
Whether it be joy or sorrow?
Though to-day may be fair,
Yet a mantle of gloom
May enshroud us in darkness to-morrow.

We are here to-day yet our feet may stray
To that land of silence and beauty;
When to-morrow shall come
Our lips may be dumb—
No more will our hands do their duty.

When in silence they rest, folded over the breast
That has ever been filled with deep sorrow,
When our cold lips are pressed
With no answering caress,
Then for us there will be no to-morrow.

To-morrow! That word hath a charm for us all,
And we look for its coming with gladness:
Though the morn may be fair
That heralds the day,
To some hearts it may be bring naught but
sadness.

Then let us forget not a kind word to speak,
To those now encompassed with sorrow—
It will cheer the sad heart,
It will brighten life's way—
It will lighten the cares of to-morrow.
Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

FORT WORTH, TEXAS, February 24, 1889,

To the Editor of Woman's Department:

Looking over the *Magazine* of January, I find it larger and more beautiful than before. I see also that a "Fireman and Engineer's Sister," has been requested to give us more news from her little sod house. I should have added as she did that there were no "trees or even a sprig for the birds to rest upon," and I will also tell you now, as I should have done then, that the letter in the October number was written from Clarendon, Donley county, Texas. I must have overlooked dating it. Please do not confuse the description given there with this place for they are dissimilar in every respect.

Clarendon was in the center of the twenty-seven counties in the extreme northwest of Texas, known as the Panhandle from the shape of the State on the map. The country is very much like the Kansas prairie; and people are holding down claims there too, but that was not my business there, I knew many who were however, and agree with the sister in thinking it requires "bravery" and patience too, more than I would ever be able to command I think. Yet the result will surely justify this. The country was entirely new except that a few men, cattle kings we call them here, had lived there, until a railroad was built through there in the spring of 1888, that was when I went there, this road connecting with Denver, Col. and Fort Worth, Tex., caused many towns to spring up along the route. The roundhouse and machine shops were at Clarendon, also the passenger and freight divisions; thus we had quite a nice little town, but at times the utter loneliness of it all made one wretched beyond compare. If, as the sister says, it was "part of God's wise providence that it should be so," this is a cheerful view to take of it, but I would often think that it

would have been quite as easy for Him to have planted at least one tree to the county tall enough for every one to see it, though there were a great many more than that, in the county; we could not see them without taking a long drive. Not so very long either for within one mile of the town was what was called there "The Basin." It was a deep hole some 25 or 30 feet deep by 100 feet square, I think, and in there the little trees, wild peach and flowering ash grew as thick as they could be almost, their tops stuck out over the top and the birds and their nests were all there. It was a strange, weird place, one could fancy all kinds of things about it, but know nothing. We used to go there, myself and some twenty little girls and boys, some afternoons and what a jubilee those children did have while I tried to read or sat down and looked at those dear trees.

There were little sod houses there, too, their owners nice, refined people as ever lived anywhere. Often they had a nice piano or organ with late magazines and books. We also had here a literary society that met once every month and everybody attended it. The house was always full, we had no select society or rather it was all select. What jolly, unconventional times we did have and the fun, the picnics and fishings. I had lived all my life in Texas, but this frontier experience was as different from anything I had ever seen or experienced before as if I had never been inside the State. It was in Clarendon that I saw the first Indians that I ever did see, and all the preconceived ideas of the noble red man were gone a glimmering. There were seven of them, they came in to get supplies; six men and one woman. She was a little chumpy squaw, dressed picturesquely enough, but if any of the blood of the beautiful Pocahontas was in her veins, the beauty had long since been extracted. She wore a red shawl, that was all; it seemed to have a cord run through, some six inches from the outer edge and gathered closely round her neck, the end falling back like a sailor's collar or a cape fringed, the shawl was belted in at the waist and had angel sleeves, the skirt was more divided like the fashionable leglettes, fringed down the outer edge, and she rode like the men did. Her feet were as "brown and bare" as Maud Muller's; no beautiful beaded moccasins, like the ones we frequently see, adorned this forest maiden, only a red shawl beautifully, brightly red, nothing more. Still the creature somehow looked coquettish. They always rode in a gallop, Indian file, one by one. I lived near the switch yard and as the yard engine was standing out there, they all galloped over there, reining up seven abreast to look at it. After a silent survey of some thirty minutes they all rode away to the southwest, one by one, the little squaw the last one, and the red gleam from her bright costume could be seen for miles on the prairie. Clarendon was a pleasant place, in many respects, to live.

[Thanks for this interesting letter. Come again and sign your name.—Ed.]

LILY McFADDEN'S LAMENT.

My dear Shandy Maguire,
Please let me inquire,
And in truth, my dear Shandy, reply.
Does it please you to madden
Poor Lily McFadden,
And leave her forlorn to die?

Dear Shandy Maguire,
When touching your lyre,
Do you think of the love you inspire?
Do you know how you sadden
Poor Lily McFadden,
And do you want to see her expire?

Dear Shandy Maguire,
Have you one fond desire
To make the sun of my life shine brighter?
Then write words that will gladden
Poor Lily McFadden,
Dear word, that you know will delight her.
— Lily McFadden.

ASHLEY, PA., January 21, 1889.

To the Editor of *Woman's Department*:

I have just finished reading the *Magazine*, it being later than usual. I am surprised to think the B. of L. F. would bother about federation with the B. of L. E. They have forgotten when they were firemen. When I read how they snubbed the firemen at their Convention I cannot help thinking how plainly they show their ignorance. I could say much more about them but I will leave that for some of the brothers to do. They should spunk up and tell those upstarts what they think about them and when there is another strike, B. of L. F. men, remember how contemptible those men treated you. I have not said anything about the Lodge yet. They are doing splendidly, pay their dues and assessments promptly. There was but one member who refused and he was expelled.

Cora Lee.

MANASQUAN, N. J., January 23, 1889.

To the Editor of *Woman's Department*:

Just received the *Magazine* for the new year, and now, I thought, is the time to write. Have been a faithful reader of your most interesting book ever since I've been married, and to-day found it real delightful, and must needs read it before my work was done. I won't bother you with compliments on railroad men, as I imagine it gets tiresome to the "Ed.," but I will say this, I feel proud of the Brotherhood, and think it a grand organization, and although the C., B. & Q. strike has made our spring bonnets come up short, yet it is all for the best, and I admire the grit the boys have in our Lodges. I know quite a number of real nice "railroad boys" in our pleasant little town, and I quite disagree with some lady friends of mine who say they wouldn't marry a railroad man. I tell them if they knew as many real manly fellows as I know they would change their minds. Would like to write something interesting, but as I am quite domestic, could find more interest in pretty things for the home, and being a young housekeeper find lots of interest in the dreadful lunch-pail, etc. My husband is a member of Fairmount Lodge and is unable to attend, as it meets in Philadelphia and he

is running down here. But I tell him I wouldn't say a word if he did "stay" late at the Brotherhood, but I imagine he thinks I only say so.

With many good wishes for the Lodge and its interests I will stop directly, else my letter will reach the waste basket, and I would never get over the disgrace. Yours.

A Fireman's Wife.

ARGENTA, ARK., January 30, 1889.

To the Editor of *Woman's Department*:

As I am a regular reader of your valuable and interesting *Magazine* and have not seen anything from our little city or from No. 304 in a long time, I thought I would write a few lines. This will be my third letter and if this escapes the waste basket as my others did I may write again.

Our little Lodge here seems to be flourishing. Of course we women folks know nothing only from outside appearances. Our town is building up real fast now and is improving every way. Lots of weddings and talk of more soon. I don't hardly know though whether to call that an improvement or not, but I guess it will be in the long run.

It was reported nearly all winter till of late that our worthy Master, John Powers, had been blindly led by Cupid till he was pierced in the heart and was to have been married on the 3d inst., but the 3d has passed and gone and we find him still in single harness.

When Bro. Power was at the Convention some one sadly mourned and missed him.

We have several boys from the C., B. & Q. on our roads here and I think that any railroad company might be proud to have such nice young men in their service. But alas! no one is proud of a "tallow pot" but his wife, mother or sister. If the boys could only know how the prayers of loved ones at home ascend to the good God who created us they would do better.

Death has visited the home of Bros. Frank Barreille and Sidney Willbanks in the last three months and taken from them the only child of each, both bright little boys.

May God bless the B. of L. F.

Nancy Lee.

A PORTRAIT.

He is a good fellow and fires on the road,
And East Syracuse is his place of abode.
His infantile friends are all happy to, that
He can bark like a dog and can meow like a cat.

He has just one hobby, and that is to pass
All his time that he can at catching black bass.
By his fire where wet fish-lines you once might
descry,
A sweet baby's clothing is hung up to dry.

For a daughter has come to him and his wife,
To add to the blessings and burdens of life.
A lugubrious look is sometimes on his face,
But his heart is quite jolly whatever takes place.

He ne'er gave assent to man's wonderful creeds,
But lives a religion of actions and deeds;
He does unto others as he'd be done by,
And unless he's been fishing, he'll not tell a lie.
I can vouch that he is, and I'm glad that I can,
Neither devil nor saint, but a good honest man.

M. H. L.

THE BROTHERHOOD.

APRIL. 1889.

NEW YORK, February 22, 1889.

MR. EDITOR:—I would strongly advise Mr. Rauch to discontinue writing for the *Magazine* until his "fits" subside. If he has found nothing in it to stir up his ideas since he sent the 8x8 puzzle, he must be not only as dull as an "ox," but as thick-skinned as a pachyderm. For the information of Mr. Rauch (who by the way was a delegate to the Engineers' convention and very much opposed to federation) allow me to state that the men on the elevated system work as near nine hours a day as the company deems expedient, and in that time rattle off from sixty to eighty miles a day, which on an unyielding road-bed like the L is more trying and tiresome than 100 to 120 miles on a surface road. We have small engines and so much the worse for us, as they are not large enough to do the work required of them; viz., pull five overcrowded coaches. In many cases we have to contend with "scrap-heaps," and when we fail to do what is practically impossible; i. e., make the time, we are rewarded by being put back firing for a month or so, that is where the good treatment comes in, and it is owing to the kindness of the understrappers and not the M. M. or his superiors. We get \$2.00 per day if we fire a year and have a clear record. We only pay \$20 to \$30 a month rent or live with Italians, and it is very evident that after supporting a family, etc., there is an enormous surplus with which to buy "white shirts" "picadilly collars" and "satin neckties." It goes without saying, that a man who dresses as Mr. R. says spends little or no time or money in liquor saloons. The nine hour system was introduced on the Elevated about three years ago without any assistance from Mr. Rauch, and it is strange that he is apparently much disturbed because we do not toll from twelve to seventeen hours for about \$1.50 and dress like sewer diggers. If we are to judge of the severity of his "fit," by the extent to which his February article was a misfit he must indeed have had a hard time of it. But when his mental equilibrium is restored and he surveys the field coolly, dispassionately and critically he will clearly see that the day is not distant when eight hours or less will constitute a day's work not only on railroads but in stores, workshops and all departments of labor in the United States. To that it is coming and our enemies whether in disguise or unmasked will have to submit to the inevitable. Of course Mr. R. is an old man and not good for much; it is therefore not difficult to see why he should distort facts and resort to subterfuges to curry favor with his superiors thereby making his position secure, but in doing so he should confine his Munchausenisms to matters less easily susceptible of

Correction.

COGITATIONS.

BY SWITCH.

MR. EDITOR—At our last regular meeting, a circular was read.
And it stated red eyed law on assessments and on dues,
And the members, one by one, took the floor and said:—

"Worthy Master and brothers, that circular states my views."

Payments in advance
Is the climax of finance,
And the delegates at Atlanta who made the law
Were not firemen of pretense,
But men of common sense,
And for a more wholesome measure men never
wagged a jaw.

MR. EDITOR—With an industrious Collector, and an honest Receiver,
Our subordinate Lodges will never be in debt.
"Spot cash" will be their motto, and in that I'm a b-liever,
And when once adopted 'twill be the glory of our Order, you bet.

There may be some rebelling,
And there may be some expelling,
But the "cash down" members of the Order who remain

Will prove true in calm or storm,
Until Gabriel blows his horn,
And whether victorious or defeated, will try, try again.

MR. EDITOR—On former occasions, direct, without evasions,
I have told you my calling, and my probable career.
I've referred to my condition, and my laudable ambition
To get on the right side of a cab and be an engineer.

You bet, I am not shaking
About my undertaking;
I am hustling for the throttle, and keep it full in view;

And when I do get there,
You may bet your life, and swear,
I shall be, as I am now, a Brotherhood fireman
forever, staunch and true.

BINGHAMPTON, February 16, 1889.

Editor Firemen's Magazine:

As I have not seen anything in the *Magazine* from Magnet Lodge No. 227, I concluded to be the first to break the silence that has so long prevailed. Although we have had little to say, we have been very attentive listeners. I wish to say that our membership is not very large and regret that so many of our brothers are on the different roads and branches, making it quite difficult to attend meetings, but I can say that they always manage to be on hand with their dues quite promptly, which is the one thing for the good of the Order. We extend a vote of thanks to Mr. Lawder for presenting the Lodge with a set of marble gavels, which we appreciate very much. May the boys remember him in their patronage. We also extend a vote of thanks to Mrs. E. M. Vernold for presenting the Lodge with a beautiful set of plush coverings for our pedestals, made and handsomely worked by herself, which not only shows her appreciation of our Order, but also her excellent skill. May more of our brothers be so fortunate as to possess a wife with such excellent taste and judgment, and I hope more of the ladies will take this as a gentle hint to go and do likewise.

G. B. Warner.

"IS MARRIAGE A FAILURE?"

Written in reply to the request of Mrs. Ida A. Harper, in February Magazine.

"Is marriage a failure?" I very much fear

A number will tell you it is;
Put me down with the ayes, and my vote is sincere,

Which you'd know if you'd gaze on my phiz,
You could see a most sad and disconsolate look,
Which I fain in my heart would disguise;
'Tis a far-away glance, to the tryst at the brook,
Where I spooned 'neath my bachelor skies.

If a fellow could only resist the desire
To embrace a coquettish young maid,
Put a brake on his feelings, and smother the fire
That the witch in his bosom had made,
He could sleep in the morning as long as he'd choose
And enjoy all the comforts of life,
But when married, Lord pity the wretch who'll refuse
To kindle the fire for his wife.

"Is marriage a failure?" You bet! and you know

All the numberless tricks of your sex
To allure a poor devil, till churchward he'll go,
Disregarding the nods and the becks
Of the Benedictine, ridiculing the pride
He assumes as he steps down the aisle,
With some charmer who'll there be yoked on as a bride,
How the dough-head goes off with a smile!

For a month he may think liquid honey rolls down

In a stream from the gods to his lips,
But just wait till the charmer salutes with a frown,
And his joys she will quickly eclipse;
Then he'll sigh for his bachelor freedom once more,
And he'll think of the nights that are gone,
When he flirted and frolicked around with a score,
Instead of being buckled to one.

Let a twelve month roll round and look out for him then,

Note how slowly he'll move on his pins,
His conceit is all gone, he's the saddest of men,
And his wife may have crushed him with twins
If she asks him to solace the dear little things
When they're teething, dear Madam, I'm sure
He'll be agile as ever, as outward he springs,
From their concert of squalls, through the door.

"Is marriage a failure?" Come here with me now

And note where the bangs used to be;
Do you think that in maidenhood days such a brow

Would be left for inspection of me?
If you do you must think her a fool, which she's not,

It was always her earnest desire
To attend to the frizzes which danced on that spot,
Till she captured poor Shandy Maguire.

Ask Solomon's ghost, it will tell you, my dear,
A very remarkable story,
About how Old Wisdom walked off on his ear
From his throne in the height of his glory.
He is known as the wise, by some Scriptural rule
Written down in the far away ages,
But the ladies soon made him a driv'ling old fool.
Though he ranks as the wisest of sages.

"Is marriage a failure?" 'Tis worse; 'tis a fraud

'Tis the biggest parading to-day;
And, if justice were done, 'twould be quickly outlawed,

And be driven from mankind away;

For when once a poor fellow is tied neck and heels
To the skirt of some petticoat tight,
Oh! he never can budge, half an inch, save he steals
Like a thief, to his pals, in the night.

"Is marriage a failure?" Ah! yes, for the men.
We're all but a parcel of slaves;
We're corralled by our wives like young colts in a pen,

Till we're carried feet first to our graves;
Oh! then, how they'll flam out and go for a mash.
The moment they tie up our toes,
Providing we leave them a wallet of cash,
To crimson their cheeks like the rose!

"Is marriage a failure?" Come, boys, circle round,
And vote as your ears will dictate,
If you do, what a thundering aye will resound
From poor victims of merciless fate!
If we only the fetters of wedlock could fling
Far away, and again, boys, be free,
We'd delightedly dance and melodiously sing,
Every heart bubbling over with glee!

Shandy Maguire.

POCATELLO, IDAHO, February 10, 1889.

MR. EDITOR:—The convention at Richmond is over, the great C. B. and Q. strike is ended, and what is the position of the B. of L. F. to-day? Have we not all been compelled to swallow the bitter pill of shame and mortification? Who administered it but the Brotherhood of Locomotive Engineers? Were we not led to believe that the offensive clauses of their constitution would be repealed? Have we not stood by them as a unit in the past? What is the result? They fail to repeal any portion of their constitution that effects our interest, and add insult to injury by utterly ignoring us in the settlement with the "Q."

They have hurled insult in our faces, and defied us to help ourselves.

Is our organization to tamely submit? Are we slaves, that we must consent to be ruled by the prejudices of the aged, moss-grown fossils of the B. of L. E.? What magic is there in the B. of L. E. that yearly draws from us so many of our noblest and best men?

Brothers, arouse in your dignity and manhood. Accept the gauntlet they have cast at your feet. Refuse to be drawn from the Order that has protected your interests; cease to be apostates; love the parent that has nourished your infancy; be forever true to the principles and policy of the noblest Order under the sun; be staunch as the "Rock of Ages" to our beloved Brotherhood, and in five years, be assured, the haughtiness of our would-be superiors will be a thing of the past. Compel them to swallow the pill that has been gall and wormwood to us, and driven the hot blush of humiliation to the face of every true fireman.

Brothers, cease to cringe and crawl at their doors for admission, cease to infuse new and younger life blood into the veins of their Order, and teach the ancient fossils who voted in the majority at Richmond that your manhood will, at last avenge a cruel insult.

The remedy lies in our own hands, for this in-

justice and wrong; shall we use it and cure the evil? or, shall we say with downcast face, and bended knee to P. M. Arthur and his order, "As ye will it, our masters."

Frank Walton.

NEW YORK, February 22.

Editor of the Firemen's Magazine:

Mr. E. J. Ranch sets out in his letter in the *Magazine* for February (page 114) to be exceedingly sarcastic, and the intensity of his emotion, as he handles his pen, makes sad havoc with his grammar. Judging from his letter, there are men in the world with instincts that make their very souls recoil at the thought that other men actually want to be clean. But their ignorance must be his excuse for such wildly uncouth fancies, for in the region where Mr. Rauch has run an engine the grand primeval forest trees are all the witnesses he had, and it did not matter the least even if he dressed in a manner fit to make a tramp blush. But here in New York, where civilization predominates and manners in a measure are of some account, the common decencies of life must be observed, and picadilly collars, white shirts, neckties, etc., etc., must be worn (by the way, *who* wears them?) for, if firemen here were clothed in the garb that it is but fair to assume Mr. Ranch used, the "police" and "Board of Health" would promptly and properly interfere.

By the way, when the "engineers" struck on the Manhattan road, and the officials there felt that they had the firemen with them, what did the firemen do? Why they just stiffened up their gorgeously white Picadilly collars, tied up their fine neckties, donned their "biled shirts," and stood by the engineers all the way through like little men.

Picadilly.

CHICAGO, February 24, 1889.

MR. EDITOR:—Chicago Lodge, No. 95, gave its twelfth annual ball, Thursday evening, February 21st, at Martine's West Side Academy, Ada street, and it must be acknowledged that it was the peer of all that 95 has held, in point of attendance, as otherwise. There were upwards of two hundred couples present, and nothing occurred to mar the pleasure of any one present. Prof. Bolger, with his skilled musicians, rendered the latest, and it must be said that Tom is getting there in great style. He was at his best and did his best to please all. The supper was served in the basement of the hall, and was all that could be asked. Much credit is due to the committee of arrangements, Bros. Wallbaum, Mahoney and McDonough, for their noble efforts in making such a good showing in these trying times, as it is chiefly to the brothers named that we owe our grand success. I would say a word to our sister Lodgee, and it is this, always be sure when in any undertaking that you appoint good live brothers to take charge; if so, you will always meet with success; but always be sure you are right before you make the appointment. We regretted very much the non-appearance of our Grand officers, as we know they would have enjoyed themselves

had they been with us. The ball lasted until daylight, when the orchestra sounded the notes of "Home, Sweet Home," then the merry crowd retired to get some needed rest. We hope to see those smiling faces with many more at our next ball, as we shall always do our best to make such occasions pleasant and enjoyable for our friends.

Fraternally,

Jas. Leahy.

HAMILTON, ONT., January 29, 1889.

To the Editor of Firemen's Magazine:

It affords me pleasure to write a few words to the *Magazine* to let our American brothers know that Maple Leaf Lodge is still in existence and all its members in good standing although the assessments have been rather heavy to support our brothers on the C., B. & Q., still we are ready and willing to aid them in gaining the victory. I don't know how our American brothers are treated in regard to engines, but we don't know what engine we are going to get till we go to the shop, and can't get enough steam in some of the scraps to keep the pumps from freezing. The engineer gets a cuslon to sit on and the fireman has to be content with his coat or a bundle of hemp for a cuslon. Why don't the boys on the G. W. Division of the Grand Trunk Railway see into this, if they are Brotherhood men at all. Bro. Fields has got home and he has the sympathy of all who know him, and though he has lost his hands, he says he never felt better in health than at present. Bro. McCallum has entered the bonds of matrimony. We have not got the cigars yet, Bill? Hoping to hear from some of the Maple Leafs who are abler correspondents than myself. I will close.

Straight Stack.

FAREWELL.

[In memory of Little Fred Hefter, who died February 16th, 1889. Dedicated to his father by Joseph E. Evans.]

Dear little Fred, thy heavenly face
Has left in my heart a vacant place.
I would give the world if my arms could entwine
That dear little angel boy of mine.

First in the morning, at break of day,
Driving with kisses my slumber away,
Brighter his smile than the sunbeams shine,
That dear little angel boy of mine.

And all day long, with his winsome ways,
Drawing the sunshine from gloomy days,
His prattle and laughter would still combine
To add to my love for that boy of mine.

And as the shades of eve would enclose,
And wrap my darling in sweet repose,
Not all the wealth of the richest mine
Could lessen my love for that boy of mine.

Closely I pressed to my aching breast
The bird in my heart who had made his nest,
And I knew no cause in the world to repine
If heaven would spare me that boy of mine.

But greater than mine was the Saviour's love.
His angels bore my darling above,
And I know in the mansions of Jesus divine
Is waiting for me, that boy of mine.

"Suffer little children to come unto me and forbid them not, for of such is the kingdom of Heaven."

MINNEAPOLIS, MINN., Feb. 17, 1889.

Personals.

E. S. RIGBY, member of Headlight Lodge No. 217, on Logansport Division of the Vandalla, is one of the live men of the Order, who keeps posted and is well up in the work of the Brotherhood.

HENRY ZINK, *Magazine Agent* of Eureka Lodge No. 14, is on the Vandalla and runs into Terre Haute. It would be difficult to scare up a more genial and companionable man, besides, he has the true Brotherhood spirit.

The genial Secretary of Confidence Lodge No. 102, was remembered on Valentine day in a manner to afford him special satisfaction. The Valentine came in the shape of a seven pound girl and Bro. Krull and all hands are supremely happy.

MINGLED expressions of pleasure and regret fell from the lips of Bro. C. E. Long, of No. 41 when he found it was a girl instead of a boy. Bro. Long may not be as happy as he would like to be, but he feels the importance of the situation just the same.

E. H. BRENNAN, of Headlight Lodge No. 217, running on the Logansport Division of the Vandalla, is a Brotherhood man in the best sense of the term, which in these times means as much or more than at any period in the history of the Brotherhood.

One "Osmer Briggs," lately employed on the Dakota Division of the Northern Pac. Co. is understood, is traveling as a Brotherhood Fireman, and wearing a badge of the Order. He is a dead beat, and B. L. F. men are requested to keep a look out for him.

CHAS. SCHERMERNHORN, of Tried and True Lodge No. 361, recently visited Terre Haute in quest of pleasure, and for a time, became the guest of the Sheriff. It is a sad commentary upon the times, when bolts and bars deprive a man of his liberty, just because he is a good fellow.

LEVI MATTIKS, of Mount Vernon, Ohio, and a member of Franklin Lodge No. 9, was recently married to Miss Pearl Porton, one of the fair daughters of the Hoosier state. Hosts of friends congratulate the happy couple, and wish them their full share of prosperity and happiness.

The *Mattoon Star* of recent date says: "Charley Singleton and H. Greenmeyer went to Evansville recently, being provided with passes that read 'Pass Singleton and Greenmeyer, Mattoon to Evansville; cause, busted.'" If a pass is ever valuable to a passenger it must be when he is "busted." Is it so Charley?

VICE GRAND MASTER HANNAHAN was recently in the beautiful city of Mobile, Ala., accompanied by his charming wife. While in the city they were the guests of Bro. Carney, where every want was anticipated and supplied. During his brief stay, Bro. Hannahan addressed a meeting composed of Knights of Labor, painters, carpenters and joiners, locomotive firemen and engineers. The attendance was large, the address able and audience appreciative. Alabama Lodge is in good shape, the membership being wide-awake and progressive.

P. C. WINN, of Chicago, writes an interesting account of a ball, given on January 23 at Apollo Hall, Chicago, under the auspices of T. P. O'Rourke Lodge, No. 241. The attendance was large, there having been two hundred couple in the grand march. The programme announced eighteen different dances, and the occasion was one which afforded the guests the largest measure of enjoyment. The ladies were beautiful, the gentlemen gallant and the music superb. On such occasions the hours go by on tip toe, but leave for the guests many happy memories.

GEORGE HOFFMAN, a member of J. M. Raymond Lodge No. 49, has opened the Rockaway House at Hot Springs, Ark., and is prepared to afford first-class accommodations to guests at satisfactory rates. The Rockaway House is advantageously situated, having direct street car connections with the depot, and we certainly wish Bro. Hoffman success in his enterprise.

F. J. KISTLER, of Franklin Lodge, No. 9, is widely known as a man of energy. Everybody says, "Joe is a hustler from way back," and is widely known by the sobriquet of "Coal King of Columbus." He is a man who has set the example of organizing circumstances and shaping them to his will—something that any man can do more or less if he has the will.

We had the pleasure recently of meeting in Terre Haute Brothers Daniel Cadden, Chas. N. Halk, J. H. Kirwan, Chas. Schermernhorn, Walter E. Ensign, and James Hovan, all members of Tried and True Lodge, No. 361, of Vincennes, Ind. These are locomotive firemen who place the right estimate upon the Order and have a full appreciation of the benefits and blessing it confers.

The beauties of coöperation were brought out not long since, when the Firemen on the Western & Atlantic had grievances which they submitted to the engineers, and which the engineers sent back, declining to coöperate. Such samples of coöperation are well calculated to make Brotherhood Firemen exclaim—"Saw my leg off."

TO EMPIRE LODGE.

Here's to Empire Lodge, 2, 1 and 2,
As the boys are traveling this wide world thro',
And doing that which we all ought to do—
Adding members to Empire, 2, 1 and 2.

Here's to Lench, the friend of all firemen,
Who helps them along, the best that he can,
He works like a hero, as all ought to do,
And enjoys the advancement of old 2, 1 and 2.

Now the next I shall notice is Henry French.
He is a staunch one and is always found in the trench;
He works all the day, and does all he can do
To add to the members of old 2, 1 and 2.

He's just been advanced from the left to the right;

He's running an extra, and 'twill be his delight
Whatever engine he has, to stand by her, true,
And he carries the good wishes from old 2, 1 and 2.

Now here comes the dandy, George Walker by name,
But he carries the respect of the girls just the same.

But the boys just joke with him and give him the cue,
For he's the life and the rusher of old 2, 1 and 2.

Well, here's to the rest of the jolly good boys,
Who handle the scoops as if they were toys,
But when you want men who are honest and true,
Just call on the Empire, old 2, 1 and 2.

Well, I'll stop with my muse, but I hope you'll enjoy it,

Though it comes from the pen of a greasy mechanic,

But here's to the health of the boys dressed in blue,

And may you all prosper as old 2, 1 and 2.

Mechanic.

WATERTOWN, N. Y., Jan. 23, 1889.

Correspondence must in all cases be brief and to the point.

Subscribers must begin with the January, April, July or October number and expire with the year.

Change of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

APRIL, 1889.

It is a mistake to suppose that a railroad bed is made of feathers.

A GREAT many railroad officials have been caught in the act of stealing their tracks, while others have been known to steal the entire road.

AN old soldier seeking employment of a railroad builder, was asked if he could spike rails, he replied, "certainly if I can find their touch holes.

THE agents of the *Firemen's Magazine*, who are actively engaged in securing subscribers are doing a noble work for the Order. Roll in the subscribers, boys.

THE *Firemen's Magazine* is winning golden opinions from courageous men throughout the country. It has won its place in the front rank and is holding it grandly.

MR. HENRY S. IVES, the Young Napoleon of finance, who swallowed several railroads is now playing "water-loo" in Ludlow prison and is on his way to Hell-ena via the C., H. & D. where he will have time to Sing Sing like a mocking bird.

THERE are "no flies" on the *Firemen's Magazine*. It is "all right." It is keeping up with the procession. We want more subscribers; our brother firemen can obtain them; shall we have them? Well, that depends largely upon the energy of the agents, and the work of the membership of all the Lodges. We ought to have 50,000 subscribers, and can have them, if all hands will work for the success of the *Magazine*.

As an illustration of the extraordinary mildness of the winter the New York Central locomotives as late as January 24th were still taking up water from the troughs between the tracks, a condition of things unprecedented in the state of New York.

THE *Magazine* is putting forth its best energies to maintain the honor, dignity and independence of our noble brotherhood. It is worthy of the support of every Brotherhood firemen. If our brethren will take hold of the matter in earnest, every one of them can send us a subscriber. We ask our brother to do this, or to make an effort in that direction.

How we have grown in a hundred years, is shown by the statement that the collection of duties at the port of New York for the first year, beginning August 5, 1789, amounted to \$366,038 85, and for the year ending December 31, 1888, the duties paid, amounted to \$140,880,080.15. Those who enjoy such problems can work them out at their leisure. They will find the growth most remarkable.

It is stated that Mr. George J. Gould, son of Jay Gould, is responsible for the dismissal of Mr. A. L. Hopkins, from his business relations with Mr. Jay Gould. Mr. George Gould, it is said has his father well under subjection, and is running things pretty much as he sees proper. Mr. Jay Gould is very rich, so it is said, but if he does not keep an eye on that boy, he may yet exclaim, "By George, we are bursted."

OUR readers, engineers and firemen, will be interested in reading a description of a "non-exhaust steam engine," taken from the *New York World*, and which appears in our department of selections. It is a highly readable account of an invention (?) which should it pan out power, will at once and forever redeem the term "crank" from derision, and place the name of the inventor at a dizzy elevation above all others who have taken the steam engine route to fame.

JUST IN TIME LODGE, No. 149, held its seventh annual ball and reunion, February 14th, and, as usual, it was a brilliant affair. Through the courtesy of Bro. J. F. Hough, we are in receipt of a large book, embellished with photographs of the Grand Officers of the Order with brief historical sketches. The book constitutes a new departure in the festivities of the Lodge, and is an evidence of enterprise and culture. The guests having each received a book, it becomes a treasured souvenir, always recalling the pleasures of a delightful occasion.

THE industrial affairs of the Missouri state prison, at Jefferson City, "reviewed from the standpoint of a convict," by G. W. Dixon, appears in the *St. Louis Globe-Democrat*. Mr. Convict Dixon writes like one who has given the subject patient consideration. It appears that of the 1,800 inmates of the Jefferson City industrial school, 950 are the employés of "contractors" who whether willing or unwilling, "knowing the terrors of the powers that be," are "persuaded to perform their tasks." Mr. Convict Dixon, who is undoubtedly an educated gentleman, assure the readers of the *Globe-Democrat*, that trades are not learned in the Missouri penitentiary—more properly "factory" or "industrial college"—only parts of a trade, as for instance, "a man to work in the shoe shops is not required to know all about making shoes, since he may be a welter, a beeler, a stitcher or a laster without knowing anything about the other parts. In the tailor shop a man may know how to run the long seams in a pair of pants without knowing how to do any other part of the work, and so it is in all the shops here." In doing this piece-work, the convict students become very proficient. They have no cares upon their minds, no wives and children to support, no rent to pay, no grocery bills to settle, they can attend strictly to business. They have three square meals a day, are not overworked, if sick, have a good doctor, and if religiously inclined, have a spiritual adviser entirely worthy of their confidence. Mr. Convict Dixon, says, his fellow students do their work better and faster than the skilled competitor on the outside," and that "the cost of making a pair of pants by these unskilled workmen is less than 4c, a pair of overalls costs about 3c, a coat costs 10c, and a vest about 4c or 5c. In the saddle shop men who stitch are required to do ten saddles a day in winter and eleven a day during spring, summer and fall." In the tailor shop, these wards of Missouri, "turn out seventy-two pairs of pants a day," at less than 4 cents a pair. Now, suppose the same number of vests and coats are turned out daily. In that case, the great state of Missouri turns out 72 suits of cloths daily at a cost, in labor of 18 cents each, or a total cost of \$13.14. In a year of 300 days, the great state of Missouri supplies 21,900 suits of clothes, at a labor cost of 18 cents each—better than "outside skilled labor" could supply—and at a labor cost that would make paupers of all honest people who attempted to compete with convicts, and what is true of clothing, is doubtless true of every other article manufactured. A convict is required to make a dozen shirts a day. His wages, 45 cents a day, makes the labor cost of a shirt less than 4 cents, and an average of 10½ saddles a day, at 45c, makes their labor cost of a

saddle about the same as that of a shirt. In this way, states are manufacturing criminals in every direction by making it impossible for honest artisans to compete with prison labor. Mr. Convict Dixon, believes, in justice to all parties, that the wages of convicts should be advanced, and that prisons ought to be run on the coöperative plan, the convicts sharing in the profits. This plan Mr. Convict Dixon believes "would encourage men to work more willingly, to do their work better, and to work more days, besides it would save many young men from a second term by giving them a few dollars on which to live on going out, till they could find some honest way of making a support. Under the present system at expiration of term the convict is given a suit of clothes, so flimsy that a hard wind would blow it to pieces, and just money enough to take him to the place from which he was sent, where, without money, clothes or friends, he is forced to steal or go hungry and naked." The management of prisons should be at once and forever divorced from all ideas of profits. The talk about reforming prisoners in prisons under present regulations, is futile. The proof is abundant. What is wanted is to deter men from the commission of crimes. To do this, torture is not required. But take the prisoner and put him into a cell and keep him there, feed him and clothe him properly—but keep him in his cell, let it be well ventilated and comfortable, but during the entire term, keep him locked up—and when he does get out, he will not, except in rare instances, be incarcerated for a second term. In proof of this, the most vicious and incorrigible villains are brought to terms. They can't bear solitary confinement. Put a felon into a cell and keep him there, even one year, and he will rarely take the chances of going to prison again. Such a policy would empty the prisons of the country.

* * *

WE have information from Rock Island, that Mr. John A. Murrin, was on the 18th of February, appointed and confirmed as the Superintendent of the Water Works at Rock Island. Mr. Murrin was a passenger engineer on the C., B. & Q. system, and was one of the heroic strikers in that long contested struggle. He is a thorough engineer, and takes the responsible office to which he was unanimously chosen by the City Council of Rock Island, with the utmost confidence of all parties, that his administration will give satisfaction. One by one the victims of the "Q" strike will find employment, but they will not see the day that they will have a regret for the effort they made to secure justice at the hands of a heartless, grinding and autocratic corporation.

DIED OF DRY ROT.

Division No. 321, of the Brotherhood of Locomotive Engineers, Disbands.

We reproduce the headlines of an Associated Press dispatch, sent from Philadelphia February 20th. The dispatch was as follows:

It is learned that at a meeting held here Sunday night, the members of Enterprise Division, No. 321, of the Brotherhood of Engineers, decided that the division be abandoned. It is said that there was an unusually large attendance at the meeting, and the resolution that the division be dissolved was adopted without a dissenting vote. A committee was appointed to wind up the affairs of the division, and to return the charter and other papers to the general offices of the order. The division was composed almost exclusively of Reading railroad engineers, and was one of the largest divisions with which the Reading engineers associated themselves. A few of the Pennsylvania men belonged to the division.

One of the members, who has been prominent as an agitator, explained his vote in the affirmative by saying that he had been threatened with discharge if he did not leave the order.

One of the ex-members of the division was asked what effect the wiping out of No. 321 would have upon the engineers of the Pennsylvania railroad system. "I am not in a position to speak for them," he said, "but I know that they, in common with the Reading engineers, have been long since satisfied that the order has become powerless to protect their interests, and of late has been simply a means of taxing all of us enormously for the support of the engineers thrown out of employment by the ill-advised and unsuccessful strike on the Chicago, Burlington & Quincy road, and I have no reason to believe but that they are as tired of this as we are. These are the reasons that principally caused us to disband."

"One of your members has said that he voted for the resolution to dissolve because he had been threatened with discharge if he did not leave the order. Do you know of any such threats?"

"I do not. We wound up because there was no use in our any longer keeping up the organization. Out of about one hundred members not more than a dozen were in good standing."

"Then you died of a sort of dry rot?"

"That's about the size of it."

The account relating to the collapse of Division No. 321, of the Brotherhood of Locomotive Engineers, as given above, seems to be so explicit as not to admit of doubt. The probability is that Division No. 321, B. of L. E., has ingloriously ceased to exist. We know nothing of its history except what is contained in the dispatch which we reproduce. The dispatch may do the division great injustice, but if it is true, then Division No. 321, B. of L. E., for the good of the Brotherhood it dishonored, has not died a day too soon; indeed, it would have been better for the order if it had never been born. It must have been infirm from its birth—totally disqualified for the rough-and-tumble battle of life. One member, so says the dispatch, voted to disband the division because "he had been threatened with discharge if he did not leave the order." That member will be required to sit for his photograph for the benefit of working men

in every division, lodge and assembly of organized labor throughout the land. Look at him. He's a dwarf—nothing big about him, except his hands and feet. God's, what a head he has on him! What a neck! Look at the curve of his spine—pipe-stem legs—his abnormally developed chest and abdomen. Look at the loose, pregnant hinges of his knees that bend in the presence of the boss, that "thrill may follow fawning." Take him *tout ensemble*, all together, from head to heels, and he's just the fellow to vote in the affirmative to disband a division or a lodge, because "threatened with discharge if he did not leave the order." It would take the brains of a thousand of such men to meet on equal terms a gallinipper. When a man votes "aye" in response to a threat, he has no more claims to manhood than a cockroach, he has no more claim to courage than a sheep, no more claim to independence than a galley-slave—and yet such mental and moral pigmies get into labor organizations as tape-worms get into the stomachs and intestines of men.

Another member of Division 321, B. of L. E., favored disbanding the division because of the strike on the C., B. & Q., and this member seems to be the spokesman for eighty-eight out of one hundred members. These eighty-eight refused to pay assessments to maintain their heroic brethren, who were struggling for victory over a soulless corporation. They loved money more than honor. The proud name of their Brotherhood, its historic triumphs, its influence in securing fair play and fair treatment in a hundred contests were totally valueless when thrown in the balance against a few paltry dollars. Such men were born to be the willing victims of power. They are fair weather sailors, dress parade soldiers. They are not for the storm nor the battle. The more of them in any labor organization the more unfortunate is that organization. After all, there is nothing in the action of Division 321, specially strange. Such incidents have occurred before in the history of labor organizations and all other organizations. Human nature, always the same, has it freaks, only in rare instances is the birth of monstrosities accounted for. No one, we presume, could tell how or why Division 321, B. of L. E., happened to have only twelve courageous, mentally and morally well formed men to eighty-eight deformities. In large litters of pigs and pups it often occurs that one is more or less abnormal—minus a tail, a foot, an eye, or perhaps with two tails or an extra leg or a double head, but seldom does the paternal display equal that of Division 321, in which eighty-eight members all have "dry rot," at the same time fatally. Most certainly do we congratulate the twelve engineers, who escaped the "dry rot" pestilence.

For the Magazine:

PLAYING WITH THE CHAIRS.

See the children in their play,—
Playing with the chairs!
Who can see the sport that they,
On a stormy winter day,
Are in innocence enjoying,
All their everglades employing,
And not wish again to be
Back to childhood's days when we,
Free from life's encroaching cares,
Danced around our mother's knee
Playing with the chairs?

Now they have a train of cars,
Which, of course, are chairs;
Nothing their enjoyment mars,
Health the gate of mirth unbars,
Hear their shouts of laughter gushing,
As their train, in fancy, rushing,
Dashes on around the curve
With a joyous sweep and swerve,
While the precious ones it bears
Wildly strain each little nerve
Clinging to the chairs.

Now they form a pallsade
With a row of chairs.
Were there ever arms arrayed
Strong enough for that stockade?
Not from clashing sabres gleaming
Comes the light so strangely beaming,
But the merry, dancing light
Streams from laughing eyes so bright,
Little diamonds set in pairs;—
Bless each little unplumed knight
Playing with the chairs!

Now they scamper to and fro,
Climbing on the chairs.
Rosy cheeks with health aglow,
Little tongues that prattle so;
Little feet that gaily patter
Keeping up a merry clatter
Till the shades of evening steal,
When the little loved ones kneel
And repeat their simple prayers,
Ere repose their lashes seal,
Kneeling by the chairs.

When the evening's work is done,
And the empty chairs,
Implements of childish fun,
Are adjusted one by one;
Still the little ones are dreaming
Of their colors proudly streaming
From the little parapet,
Nor in dreams do they forget
Any pleasure that was theirs;
For in slumber they are yet
Playing with the chairs.

Are we not like children too,
Playing with the chairs—
Doing much as children do?
Are there many "big folks" who
Never let their fancy wander,
Never in a day-dream ponder?
Yet, perhaps we sometimes make,
In our blindness, this mistake:
That our necessary cares
We would for an hour forsake
To play again with chairs.

—Geo. W. Hall.

STANBERRY, Mo., March, 1889.

* * *

We have received from the editor and publisher, J. L. Rengnalt, Esq., *Railway World Office*, 420 Library street, Philadelphia, a magnificent volume of 445 pages, devoted to a description of the "development of the transportation systems in the United States" from the earliest times to the pre-

sent, "in water channels, roads, turnpikes, canals, railways, vessels, vehicles, cars and locomotives." The book also furnishes information relating to "the cost of transportation at various times and places by the different methods," in a word, the book is a compendium, of the important matters of which it treats, of the highest value. Every page exhibits a thorough knowledge of the subjects brought to the attention of the reader, and a wise comprehension of what the student of transportation requires. In the prospectus the editor says:

The work gives a comprehensive sketch of the fundamental features of American railways from the beginning to the present time, in connection with their relations to each other, to rival and auxiliary land and water transportation agencies, and the communities served. It shows the influences to which railways have been subjected; gives the number of miles of railway constructed by each company in each year before 1880, and similar information relating to subsequent additions to mileage; contains an elaborate compilation of rates and the cost of transportation by different methods and at various periods, including the charges of typical classes of lines and the cost of movements on common roads and water routes; and presents numerous details relating to the construction, capitalization, equipment and management of railways. A considerable portion of the contents is devoted to descriptions of the principal stages of engineering and mechanical progress, by which wonderful national, industrial and corporate results have been achieved.

The book contains a number of full page illustrations, and is sold for \$5.00, which, all things considered, makes it one of the cheapest, as it is one of the most valuable, contributions to the industrial literature of the century.

* * *

THE *Employer's Magazine* says the Union Pacific Railway Company has reduced the pay of its section men 15 cents a day, and adds: "On what basis of justice, right or necessity can such be justified? What manner of man is responsible for it, will anyone assume it and attempt to justify himself? Is it simply because they can? Will they justify themselves with might, the might of the robber? Had want reached so close the hearthstones of the stockholders or bondholders of the Union Pacific that such desperate measures were necessary? If so it is very doubtful if the relief will be lasting if it gives any at all. A reduction in wages on men, who as it was only barely existed, takes the form of oppression; the oppressors of the past certainly have nothing to be happy over, the reaction has often overwhelmed them." The Union Pacific Railway Company don't stop to ask any questions with reference to the wants and rights of its section men. It sees how it can pocket 90 cents a week of their honestly earned wages, and it takes the money regardless of consequences. It is simply robbery, but there is no redress.

GRIEVANCE COMMITTEES.

The laws of our Order provide for the appointment of Grievance Committees by Subordinate Lodges. The idea of a Grievance Committee is comparatively modern. Owing to this fact it is quite probable the legitimate prerogatives of a Grievance Committee are not well understood. Certain it is that in numerous instances this grievance business has been sadly overdone. Nothing is more unfortunate than for a Grievance Committee to go roaming about in search of grievances. It recalls the exploits of Don Quixote and his squire, Sancho. When a Grievance Committee starts out for the purpose of finding a grievance, they are pretty sure to find something, and frequently, in calling it a "grievance," bring the matter and their mission into ridicule.

It appears from reports, that some of the Subordinate Lodges have had a sad Grievance Committee experience. The Grievance Committee having been appointed, regards it as an imperative duty to find a grievance, and at once the eyes of the committee become telescopic, far-reaching in their vision, besides, their hearing becomes super-sensitive. They can see a grievance as small as a pin-head a hundred miles away, and though the noise it makes is not more than the buzzing of a blue tailed fly, it is magnified to the roar of good-sized thunder. As a consequence, the Grievance Committee, exalting its mission and expanding its sphere, starts out to examine the grievance. Arriving on the spot their eyes suddenly become microscopic, and the little pin head annoyance is enlarged to the size of a mountain. Then begins the work of investigation. Facts having been obtained, the work of reporting begins. Work progresses slowly, but the end is reached at last, and then follows discussion. All of this takes time, and all the time the Grievance Committee is under pay it is eating into the finances of the Lodge, and in some cases the Grievance Committee has absolutely bankrupted the Lodge. In such cases the real grievance is the Grievance Committee itself. It becomes an annoyance. It keeps the Lodge in constant hot water. The grievances reported are simply that class of infelicities incident to and inseparable from human affairs. To call them "grievances," such as require special action, or any action at all on the part of the Lodge, or the Brotherhood at large, is to do violence to common sense. Nor is this all. It often becomes painfully notorious that the Grievance Committee assumes arrogant airs. It blusters. It gives out warnings of coming troubles, and instead of righting wrongs multiplies annoyances, and instead of pursuing a pacific course foment feelings of unrest and insecurity. And all this time it is on pay, reducing the cash in the treasury and menacing the very life of the Lodge.

It should be understood that it is no part of the duty of a Grievance Committee to hunt grievances. A real grievance don't have to be run down. It comes to the front with bold impudence, and every one recognizes it at once. A grievance is a flagrant injustice of policy, it is the dethronement of the principles of right; it is such an outrage that to endure it without protest is degradation.

For the present, at least, the Grievance Committees of Subordinate Lodges can well afford to be conspicuously quiet, at least they are not required to be on the war path. They are not to overlook grievances, but they are not required to go about with a lighted candle to hunt for them, nor to unduly magnify every unfortunate incident into a grievance.

The *Magazine* is clearly of the opinion that the time has come when the Grievance Committees can go to work on their engines or in any of the departments of their employment with positive and great benefit to their Lodge and to the Brotherhood at large. The Brotherhood stands in great need of peace and quiet. The current year should be one of growth. The supreme demand is to repair our good ship after the "Q." storm. Our ambition should be to build up the Lodges, strengthen them in every way possible, and to do this effectually we want just as few petty annoyances as possible. The mission of our Brotherhood is peace, not war. Peace is the rule, war the exception; and having been in one of the greatest battles that ever fell to the lot of any brotherhood, we must now recuperate. To do this it is of the greatest importance that we have the largest amount of quiet throughout the entire jurisdiction, compatible with honor.

* * *

At a coroner's inquest, held at Lancaster, Pa., January 24, on the death of Conductor John C. Ryan, killed in a railroad collision, it was shown that the engineer and fireman, having been on continuous duty, sixteen hours, were both asleep, and when awakened it was too late to avoid the collision. It is the old, old story. The question arises, who is to blame? It is not clear to the minds of all men, that it is something in the nature of a crime to permit, engineers, firemen, conductors, switchmen, and telegraph dispatchers, to be on duty for sixteen hours? Men in such responsible positions, ought not to be on duty over ten hours, in fact, eight hours should be the limit, except in extraordinary cases, and the public is so profoundly interested in the matter, that the laws should provide a severe penalty in every case where men are on duty over ten hours.

* * *

No ASSESSMENT, special or beneficiary, for April.

SOME MORE COGITATIONS.

BY SWITCH.

MR. EDITOR:—I think you know me better than
to believe I am a crank,
I never bottle moonshine and call it lager beer.
You know I'm in the habit of speaking pretty
frank,
And of saying a locomotive fireman is a God-
ordained equal of a locomotive engineer.
This being the naked truth,
All the way up from youth
I have had a holy horror of hypocritical cant.
I am simply what I am,
An ambitious workman,
Who declines to appropriate what other people
plant,
Thus you'll see when I glide
From left to right hand side,
When I lay down pick and scoop, and become
an engineer,
"For auld lang syne, my dear,"
Don't you doubt or fear,
I will stand by my old Brotherhood, to memory
ever dear.

MR. EDITOR:—I am studying federation, that I
may make no mistake,
About the advantages it will confer, and which
includes, I am informed, the heroes of the brake,
Locomotive firemen and the brave men of the
switch.

For the present the B. of L. E.
And the old O. of R. C.
Hold their heads altitudinal and frown
As if they were Shahs,
Sultans, Kings or Czars,
With a divine right to rule and wear a crown.
"Nuff said," let 'em go,
I'll never cry "whoa,"
While the right is cloven down by the wrong,
And here I swear—amen—
I will train with the men
Who make federation, for the good of all, their
theme and their song.

MR. EDITOR:—I am told by those who know, that
you have an office cat,
A feline institution with a voracious appetite,
And I'm also informed that the animal is awful
fat

By being fed on poems your correspondents
write.
Since I heard the news,
I've been troubled with the blues,
For every night your cat visits me in dreams,
And I hear its caterwauling,
While poems overhauling,
And I fancy I can hear the agonizing screams
Of some poem I have written,
Not intended for cat o' kitten,
A production I had hoped would win applause—
A poem plump and fat,
Fed to your office cat,
Mangled and torn by its tigerish teeth and claws.
I have no ambition
To write cat meat composition,
I contemplate with horror such a fate as that,
But if you so choose,
To mutilate my muse,
May the d— fly away with your voracious office
cat.

THE paper entitled the *Railway Mail Service*, by Thomas L. James, ex-Postmaster General, in *Scribner's Magazine* for March, is of great interest to the general reader. It tells the whole story of the mail service from colonial times to the present, and the facts are of a character that enable the reader to comprehend at a glance, not only the magnitude of the service, but the continental grandeur of the republic. The

illustrations are numerous and enable the reader to comprehend the rapid strides of development that have been made during the past century, from 1789, when there were but seventy-five postoffices, and 1,875 miles of post-roads. In 1888 there were 143,712 miles of railway post-roads to say nothing of water routes and stages. There are now about 55,000 postoffices and the extent of the mail routes is about 375,000 miles. The paper by Mr. James begins with the man on horseback, carrying the little mail pouch with a few letters and papers, and ends with the fast mail coach sweeping along at the rate of fifty-five to sixty miles an hour, with its immense freight of letters and printed matter. "The railway mail service," says Mr. James, "at the close of the fiscal year ending June 30, 1888, gave employment to 5,094 clerks, matter was distributed on 126,310 miles of railway, and 17,402 miles additional closed pouches were carried. There were also operated forty-one inland steamboat lines on which postal clerks were employed. The postal clerks travelled (in crews) 122,031,104 miles by railway and 1,767,649 miles by steamboat. They distributed 6,528,772,060 pieces of ordinary mail matter, and handled 16,001,659 registered packages and cases, and 1,103,083 through registered pouches and inner registered sacks."

IN Boards of Trade, on 'change, in all of the great centers of trade, merchants, capitalists and railroad kings talk glibly of the food crops of the country. They estimate the leading crops of 1888 about as follows: Wheat, 405,000,000 bushels; corn, 2,000,000,000 bushels; oats, 700,000,000 bushels; rye, 25,000,000 bushels; barley, 59,000,000 bushels; buckwheat, 14,000,000 bushels, giving a grand aggregate of 3,200,000,000 bushels, an average of fifty-two bushels for every man, woman and child in the country. Without work, without the working man, not one bushel of the products named would have been produced, and yet, it is a lamentable fact, that in a land, receiving the baptism of fabulous abundance, there exist such monsters of greed as "Old Hutch," of Chicago, who are permitted to place even food beyond the reach of the poor, or compel them to take less than their demands require to enable them to perform their task.

GOVERNOR SAMPLE, of Washington Territory, has a poor opinion of the Pinkertons, and private detective agencies, and says "they are mere organized bodies of ruffians on a par with the Chinese high-binders, and offering for hire to become the instruments of the rich and strong for the oppression of the poor and weak." That is the God's truth, and for telling it Governor Sample is entitled to universal applause.

SUBSCRIPTIONS TO THE MAGAZINE.

At the first Biennial Convention of the Order, held at Atlanta September, 1888, the *Locomotive Firemen's Magazine* was enlarged sixteen pages, from a book of eighty pages to one of ninety-six pages. Several other improvements were ordered, all of which went into effect January 1, 1889.

These changes, while giving the editor and manager more space for valuable matter, have also increased the cost of publication.

In making this appeal to the membership of the Brotherhood of Locomotive Firemen, we shall indulge in no fanciful phrase. We perform a duty which we owe to the Brotherhood and to the *Magazine*, in calling attention to the importance of making the strongest effort possible, not only by the *Magazine* Agents but to the entire membership to increase the circulation of the organ of the Order.

It is a work in which all can be useful and efficient. Manifestly, the *Magazine* Agents of the various Subordinate Lodges are charged with an important duty, and here and now we appeal to them to redouble their zeal, to make a prompt and thorough canvass of the communities in which they reside, and as extensively as possible, for subscriptions.

We call upon the officers of Subordinate Lodges to give this matter their earnest attention and to aid in every way possible to give to the *Magazine* a circulation worthy of its merits.

We appeal to every member of our good and grand Brotherhood, to put his shoulder to the wheel and load the subscription car with subscribers, for our book, *their* book, the Brotherhood book, the *Firemen's Magazine*, which, in shine and storm, always champions the rights of the toiling masses. The past year has been fruitful of the most trying ordeals to the Order, its financial resources having been taxed to an extent hitherto unknown. Our Brotherhood has been equal to every emergency, but the strain has been one of great severity, and we mention these facts, because they operate as a bar to the offering of premiums, as has been done in former years. But we hold that this intimation of lack of financial ability to offer premiums, should inspire the membership with greater zeal to roll up a splendid subscription list. In this case we appeal directly to the loyalty of the members, to their brotherhood love and pride, to their devotion to the welfare of the Order, and to their determination to win success.

We think we know to whom we appeal. We think we know the "boys." For years, we have marched, and fought, and bivouacked together, when victory has come to our standard we have rejoiced together and when defeat has come, we have not folded

our flag nor trailed it in the dust, nor has the enemy demoralized our ranks. We come to you now, brothers, comrades, and ask you to take hold of the *Magazine* and secure for it a rousing list of subscribers. What shall be your reward? The plaudit, "Well done." Shall this, our appeal be in vain? We will not believe it. We believe that every true member of our Brotherhood can secure at least one new subscriber. Will you do that? our faith is that you will try—and that you will try, try, again, and that you will succeed.

The *Magazine* is winning golden opinions beyond the boundaries of the Brotherhood. Men who know, who are capable of judging, and who are not members of our Order, pronounce it the *best* publication devoted to labor interests in the country. It is our high ambition to have the *Magazine* not only maintain its high position and reputation but to advance to still greater prominence and influence.

Will you help us? Will you make this work your own? Will you take hold of it with a will? Good. We are not mistaken, we feel the grasp of your brotherly hands. Your great hearts throb in unison with ours, and your eyes say "we will." Well, begin at once—and the pages of the *Magazine* shall glow with honest and merited eulogiums of your courage and constancy.

In obtaining subscriptions, please observe that the law specifically points out how they shall be received. 1st. All subscriptions must expire December 31st of the year—and for the current year, on December 31st, 1889. That is to say, no subscription can be taken running into 1890. If a subscription begins, say on the 1st of April, it *must* be for nine months, ending December 31st. A subscription cannot terminate before that date, nor will a subscription be taken for any period, except as stated. The subscription price is \$1.00 a year. The year begins January 1st, 1889, and ends December 31st, 1889. Subscriptions must in every case end December 31st, 1889—as for instance:

Subscriptions beginning with January, will be for one year	\$1.00
Subscriptions beginning with April, will be for nine months	75c
Subscriptions beginning with July, will be for six months	50c
Subscriptions beginning with October, will be for three months	25c

and so on, all ending December 31st, 1889.

Having made this matter as plain as possible, we do not hesitate to say that we are sanguine of success, believing that the members of our Order will respond in the true spirit to this our appeal for their assistance.

Toledo Blade:—It hurts a man just about as much to burn him in effigy as to have his shadow on a wall butted by a goat.

THE DIFFERENCE IS IN DOLLARS.

The New York *Dispatch*, sought to palliate the blunders the B. of L. E. has made in the course it has chosen to pursue toward the B. of L. F. by seeking for illustrations drawn from Masonry. The effort was a failure. It could be more severely characterized. Having unfolded the mysteries of Masonry, without damage to the ancient order, or advantage to the B. of L. E. the writer, in the *Dispatch* of February 17th still champions the aristocratic idea, that a locomotive engineer is a superior being to a locomotive fireman. He says, "In regard to the article printed on page 147 of the *Magazine*, there is this to be asked: If there is no difference between a fireman and an engineer, why is the latter paid double the amount received by the former? The editor's sarcasm is delicious, but the fact remains that an engineer is one degree above a fireman." In this we have the confession that the difference between an engineer and a fireman is not in character, integrity, education, intellect, honor, probity, social standing, religion or morals, in nothing that pertains to good citizenship, but in pay, the engineer receiving "double" pay, therefore stands twice as high as a fireman in the estimation of the *Dispatch* man, and the *Dispatch* man labors to have engineers entertain the same "double" estimate of themselves. The difference is in dollars. The engineer, because he is "paid double," is therefore, according to the *Dispatch* man's estimate, "one degree above a fireman." The question arises, were the delegates to the Richmond convention, in refusing to abrogate their offensive laws, and in ignoring the B. of L. F. in appointing the "Q." committee, animated by the "double" pay idea? Does the B. of L. E. assume to be "one degree above" the B. of L. F. because engineers are "paid double"? Do locomotive engineers endorse the aristocratic idea, championed by the New York *Dispatch*? Nothing more essentially asinine was ever put in print. It is stupidity, drooling idiocy, but it is in consonance with "strict neutrality" and stubborn opposition to federation. The B. of L. E. cannot afford to pay the *Dispatch* man for its efforts to boost it into such disgusting prominence. Let it once be understood that the B. of L. E. predicates any superiority over other organizations of Railway employes on a cash basis, and from that moment it sinks to fathomless contempt, and if it does assume any superiority over other labor organizations it must be on pay. Aristocracy in the United States, is not indigenous to the soil; it is not an American idea. Here, all men are "born equal," the poor man is the peer of the rich man. The New York *Dispatch* man would reverse the programme. Taking counsel of his own conceptions of dignity and honor, independence and self-respect, he would esteem any man

who receives a greater *per diem* than himself, his superior, as "above" him and in contemplating such a colossus of wealth as Jay Gould, a Vanderbilt or an Astor, would dwindle to such contemptuous insignificance in his own estimation, that to discover him at all, a microscope would be required. No, no, a switchman, a brakeman, a fireman, is the peer of the engineer. This miserable aristocratic idea merits universal detestation. It is offensive anywhere, in labor organizations it is repulsive, odious, infamous to an extent that defies proper characterization. It will not win. It will effectually down the organization that adopts it. If we are to have an aristocracy let it be based upon honor, integrity, moral courage, independence, self-respect, let it be an aristocracy distinguished by the Brotherhood of man and the fatherhood of God. Let it incorporate Peter's declaration that "God is no respecter of persons"—rather the paltry pomp based upon dollars.

* *

The Chicago *Herald*, of February 14th, prints a statement, showing that a great revolution has been inaugurated in the order of Knights of Labor. The *Herald* says:

At the Indianapolis convention many of the members felt that while they could not indorse the wild notions of Tom Barry neither could they accept Powderly's administration. Some of those in attendance got together, and after attempting to discover what was wrong and to devise a remedy they came to the conclusion that the whole trouble lay in the fact that the order had departed from its original principles of secrecy, and that the only remedy was in a return to those principles.

It appears from the *Herald's* information that the revolution has been quietly progressing, and it is stated that "in Chicago alone, more than a score of assemblies have cut off all communication with the general executive board, and have organized as a part of the new secret order. The work is done in this way: The secret organizer picks out ten anti-Powderly men—parties whom he can trust. These ten organize with a new charter on the secret plan, with a secret name, under the most binding obligations. Then the ten charter members feel their way with the other members and lead them into the secret order by twos and threes, in a quiet way, until they have captured a majority. Then they go back into the old assembly long enough to vote it out of existence." It is claimed that Mr. Geo. Schilling is at the head of the movement, and that its progress is such as will leave Mr. Powderly out in the cold. Now for the other side.

Rochester Post Express.—Betting on the result of the National election is a good deal like laying a wager on the possibilities of a woman hitting a mark with a stone.

THE name of every member who is not squared up when the next returns come in will be stricken from the grand register and his policy cancelled. The law prohibits a delinquent from being carried on our books and we shall be governed accordingly. In this we mean business.

* * *

THE Knights of Labor in the employment of the Oregon Improvement Company, at Seattle, W. T., in January, ordered a general lockout, because the company was furnishing rifles to members of the Miner's Union. Trouble was avoided by the company, which made concessions to the Knights.

* * *

THE horses designed for the fire department of New York City are all sent to college, where they graduate before entering upon active work. The college has been in operation since 1882 and has graduated 400 students. The success of the college has been so great that it is suggested that West Point must look out for its laurels.

* * *

THE New York *Dispatch* says, "Perhaps the O. R. C. never did really accomplish wonders." Perhaps it has. It "wholly failed to meet the requirements of organized labor," and made it necessary to organize the Brotherhood of Railway Conductors, which, with gigantic strides, is marching to success. The B. of R. C. is accomplishing wonders.

* * *

THOSE who know Col. G. W. Howard, Grand Chief of the Brotherhood of Railway Conductors, regard his name as a guarantee of the triumphant success of the new Order. Col. Howard did not enlist in the noble enterprise without knowing what he was doing. On the contrary, he gave the subject that consideration due the undertaking, and then quietly surrendered a position worth to him \$5,000 a year, that he might give the power of his influence to an organization having the welfare of labor at heart. Such men know no such word as fail. Every step they take means victory.

* * *

WM. C. UTTERBACK, member of Tried and True Lodge, No. 361, died at Vincennes, February 12, 1889, and was buried at Terre Haute on the 14th. The remains were accompanied to Terre Haute by Bros. Daniel Cadden, Chas. W. Halk, J. H. Kernan, Chas. Schermerhorn, Walter E. Ensign and Jas. Hogan, all of No. 361. The funeral at Terre Haute was conducted by Tried and True Lodge, No. 361, and Vigo Lodge No. 16, the pall bearers being an equal number of the members of the Lodges named. Bro. Schermerhorn, of No. 361, officiated as Chaplain, and the obsequies were, as ever, solemn and imposing. Thus, one by one, our brethren drop away.

AMONG other strange things told of the Chinese, is that a person convicted of any crime in China, except that of murdering one of the royal family, can hire a substitute to take the punishment, even if it is death. The rate they pay those substitutes has lately advanced about 20 per cent., and the cause is laid to the English. If such a law prevailed in the United States a great many scoundrels now sheltered in Canada, would be doing business at the old stand.

* * *

WE take pleasure in calling attention to J. S. Townsend's fine nickel adjusted movement watch, adjusted to five positions, Isochromein, fifteen jewels in settings, gold screws, micrometer regulator, double sunk dial, red marginal figures, patent reversible pinions and positively non-magnetic. This movement, Mr. Townsend assures us, is gotten up especially for railroad use and is guaranteed to meet all requirements of the service and is sold at \$15.00. Mr. Townsend's place of business is 1554 Wabash avenue, Chicago, and we feel assured that those who desire to purchase a watch will find them in all regards equal to the description.

* * *

THE GREAT STRIKE ON THE "Q," is the title of a small volume just issued from the press of Messrs. Elliot & Beezly. The author, Mr. John A. Hall, is "ex-yardmaster on the C. B. & Q. system," and was one of the strikers, and therefore writes from the standpoint of personal observation and experience. The work has not appeared a day too soon. In a general way, railway employes were informed in regard to the more salient features of the strike, but the history, as presented by the author of the book, will prove in many ways a most valuable acquisition to the labor literature of the times. Our purpose at this writing is not to review the work at any length, but rather to call the attention of the readers of the *Magazine* to the fact that it is now before the public, and to say that the treasures of information it contains are of the highest value to all who desire to possess a thorough knowledge of the notable struggle. The book is dedicated to the "fraternally combined labor organizations of the country," and in his preface the author says: "To obtain justice, and obtain it legally, the weak must organize. Whatever may be the ideal to which labor reformers aspire, the first step must be organization. This is a living protest against monopoly and injustice, and the means by which we must reform our social system if we would last as a nation." We most cordially commend Mr. Hall's history of The Great Strike on the "Q" to our readers. Orders should be addressed to John A. Hall, Room 17, 164 Washington street, Chicago, Ill. Price, \$1.00.

UNMASKING HYPOCRISY.

Dishonesty takes on many forms, among which hypocrisy is probably the most common. It is always the guise chosen by the cunning knave. The hypocrite is a conscienceless creature. He is the Pharisee, who to be seen of men, and for a pretense, makes long prayers while engaged in "devouring widows' houses." Like "the devil, he can cite Scripture for his purpose." He appears like "a goodly apple," but is "rotten at the core." His *forte* is dissimulation; in false professions he is always loud. The modern hypocrite, the better to make duplicity serviceable, is very apt to put on pious airs. He gracefully wears the cloak of religion, and in his private intercourse and public addresses, takes great interest in the souls of men, and quite likely at such times he is pondering in what way he can make his deceit most profitable in the way of gaining some one's confidence and of improving his financial condition. But abandoning such reflections for the nonce, we turn our attention to one E. H. Belknap, who, in February 1888, was a conductor on the C., B. & Q. Paul Morton, who won imperishable notoriety as a champion of mendacity, was just the sort of a fellow to appreciate the talents of E. H. Belknap. The C., B. & Q., when it concluded to resist every demand for fair, honorable treatment of its engineers and firemen, had a pressing necessity for scabs, and E. H. Belknap, a member of the O. R. C., filled the bill. Be this as it may, E. H. Belknap, in association with one W. C. Cross, signed a circular, dated Burlington, Iowa, March 10, 1888, captioned, "Position of the O. R. C's." and addressed "To all members of the Order of Railway Conductors." Mr. Belknap, in addressing "all members of the Order of Railway Conductors," says:

We can assure you that the O. R. C. has made a great record for faithfulness and loyalty to principle by its members among railway officials.

Manifestly, Belknap, like Wheaton, don't care a continental for grammar, his purpose is accomplished if he can make "all the members of the Order of Railway Conductors" understand that the conductors on the C., B. & Q. scabbed, as if they had been under a solemn obligation to crawl in the dirt like worms, rather than hold up their heads and walk erect like men. But not being content with his own degradation, he exhorts "all Railway Conductors" to emulate his own abject selfishness, and says:

Now, Brothers, in conclusion, let me say to you as conductors, as employes, as members of the O. R. C., that, in case this strike spreads and your road becomes involved, "Go thou and do likewise."

The circular from which we have quoted has the following indorsement:

I have given permission to Brothers Belknap and Cross to issue the above circular.

(Signed)

C. S. WHEATON, G. C. C.

Now then, we submit that the quotation we have given from E. H. Belknap's circular has the ring of honest convictions—the robust utterances of a man who entertains the highest possible respect for railway officials. We submit that 999 men out of every thousand would conclude, Belknap is a man who intimates that he never saw even one fly on any railway official, and that members of the O. R. C. never had and never expect to have anything approximating a complaint or a "grievance" against their employers. Belknap's circular, apparently, affords the most positive assurance. Belknap's circular was evidently intended for the eyes of railway officials. His purpose was to ingratiate himself in their favor. He understood that in these degenerate times thrift often follows fawning. He was playing the game of Machiavelism. Is this true? Was his policy one of duplicity? Did his anxiety to retain his position obscure all sense of manliness? In a word, while glorifying the members of the O. R. C. on the C., B. & Q. for scabbing was he honest? And when he exhorted "all members of the Order of Railway Conductors" to scab did he not indulge in dissimulation? Such questions E. H. Belknap may answer before the tribunal of the public.

For some reason, which we shall not attempt to divine, E. H. Belknap was called upon to deliver the annual address before the representatives of the Railway Passenger and Freight Conductor's Mutual Aid Association, held in Chicago in November last. The *Railway Conductors' Monthly*, of which Calvin S. Wheaton, G. C. C., is editor, in referring to Belknap's address on the occasion, says: "The address of Bro. E. H. Belknap, delivered on the above occasion, is, we think, one of the very best ever delivered before that body." Here we have an unqualified indorsement of Belknap's address by the highest authority of the Order.

Let it be understood that whether it be Belknap or Wheaton, or the *Conductors' Monthly*, or any other person authorized to speak for the Order, their public utterances are always designed to impress railway officials and the public generally with the idea that railway conductors, members of the Order, have no grievances against railway officials, but in private, hypocrisy lays aside its mask, then Belknap ceases to crawl and stands up. Belknap issuing a circular "To all members of the Order of Railway Conductors," and Belknap making an address before the delegates to the Mutual Aid and Benefit Association of the Order, judged by utterances, are as unlike as a spaniel and a royal Bengal tiger. In his circular Belknap whines, in his address he growls and roars. In his circular he is as destitute of spine as a tape worm—in his address he has the backbone of a grizzly bear. In his circular he is as meek as a mule cow. In his address he

is an untamed bull, with horns ready for attack, and with tail erect he spurns the earth and bellows like a thunder storm.

We have before us the full text of his address, delivered on the 21st of November, 1888, before the Mutual aid and Benefit Association. It is official. It appears in the proceedings of the convention of that Association, on pages 15 and 23, inclusive. For the information of the public, for the delectation of the readers of the *Magazine*, and for the purpose of unmasking hypocrisy, we give a few extracts from the address, which the *Conductor's Monthly* for February, 1888, page 55, pronounced "one of the very best ever delivered before that body." Belknap, in his address, deploras the fact that conductors are "made the scape goats of every passengers' fancied wrongs," and then asks "wherein lies the remedy and the cure?" And he answers, "Cast your frown and stamp with the seal of infamy everything, yes everything that is false and unworthy; show by you life and your character, to all mankind, that you stand at the top of the ladder." In this strain Belknap soars and corruscates; he is a pyrotechnic display all the way from a shooting-cracker to a ten-pound rocket. After pointing out how conductors can mount up the ladder of fame and "reach the top," he says: "And you ask again, will this ever be?" He answers, "it must be," and adds, "I have looked far enough in the future to tell you what most is needed for your welfare, for your permanent success." Steadily Belknap approaches the climax. He has been looking into "the future." He has seen the ladder; the conductors climbing steadily. He urges them to climb faster and get higher. He wants them to "reach the standard which all business men must reach to be considered first in the list of honorable business men." Belknap sees conductors skulking, hiding, obscuring their light, and he goes for them as follows: "Let me say to you in all kindness, that the sooner you emerge from this hiding place and believe the opposite to be the truth, the better it will be for you."

At this juncture, Belknap inquires of the conductors, "Have you gained one step each day of your life?"—that is to say, have you gone up one round in the ladder every day of your life? Have you scabbled when ordered to scab? Have you exhorted, in a circular or otherwise, your fellow conductors to scab when ordered to do so by a railway official? Have you learned the arts of duplicity? can you play the rôle of lickspittle, that you may be blest with a smile from your boss, while in your heart of hearts you loathe yourselves for your degeneracy? Such interrogatories would seem to be in the line of Belknap's public expression. But we are now dealing with him as a spokesman in war paint, feathers and eagle

claws—in the council chamber of braves. The great medicine man of the tribe, the man with two faces and a double tongue, and we want to quote him verbatim. He is the man the *Conductors' Monthly* delights to honor, but dares not quote in full. Belknap says in his address:

"Have you gained one step each day of your life? Others have, have you? If not, then sit no longer idle and repining, but rather awake, as awoken you must, if you too would be successful."

"Ah, but says one: We do not receive pay enough to do all this for any company on earth. nothing more true than this have you ever uttered, and no one more to blame than the one who utters it. None to blame but the conductors of America that this is, as is, so true; some isolated cases have been known where here and there one has gone and asked for more pay; AS WELL BREATHE HIS BREATH ON THE FROSTED PANE OF YOUR WINDOW IN HOPES TO WARM THE WORLD; AS WELL THAT GRN GHANT HAD APPROACHED, ALONE, THE BATTLEMENTS OF LEE AND JOHNSON, AND SAID, KIND SIR, PLEASE LAY DOWN YOUR ARMS AND SURRENDER. Would they have done so? Ah, no; but when he approached the n with SIXTY THOUSAND UNION SOLDIERS, the bands playing "My Country, 'tis of Thee," and the shot, shells and BULLETS SINGING, 'Down With the Traitor, Up With the Stars,' they SANG ANOTHER TUNE and learned the greatest lesson of their life, that right is might."

"Then act as men; go to them sixty thousand strong. Not with dynamite, nor bearing the red flag of anarchy (thank God it is not a native of America), but en masse, and state your grievances as becometh men: show to them in a solid phalanx what some one has tried to do unaided and alone, and then come to me and tell me the result. And finally, what you owe your employer is only the same which is expected and exacted from the servants of all practical, substantial and prosperous business firms in the world."

In the foregoing the italics and capitals are ours (the grammar is Belknap's), our desire being to aid our readers in their analysis of Belknap. We have quoted the *Conductors' Monthly* as saying Belknap's address was "one of the very best ever delivered" before the Mutual Aid and Benefit Association. The *Monthly* reproduces portions of the address, but it is careful to omit the paragraph we have reproduced. Why? It dared not. They are an overwhelming exposé of the perfidy, the hypocrisy, of the policy of the men who have controlled the affairs of the O. R. C. Never in the history of any labor organization have declarations of hostility to corporate injustice been more emphatic than those made by Belknap. They sting like a scorpion's lash, like whips of fire. Belknap, in the presence of railway officials, tells his fellow conductors that railway officials are so heartless, so mercenary, so unjust, that a conductor going to them alone, asking for the redress of a grievance, might as well "breathe his breath on a frosted window pane in hopes of warming the world." "That is to say, railway officials are never generous, never just, never honest, never noble, but always venal, always arrogant, always contemptible. There never was a more terrible arraignment. Belknap makes no exceptions; he bundles all rail-

way officials together, including the C., B. & Q., and flays them. But to still further impress upon his hearers the stolid, soulless indifference of railway officials to any honest appeal of conductors for justice. Belknap exerts himself to exhaust metaphor and says Grant might as well have approached the battlements of Lee and Johnson, and said, "Kind sirs, please surrender," as for a conductor to approach a railway official alone and ask for simple justice. What does Belknap recommend? He tells conductors to emulate Grant—never to go to railway officials alone pleading for justice, but to go "sixty thousand strong," "en masse," "in a solid phalanx," in a word, to strike for their rights. The language admits of no other construction, and this conjecture is the reason why the *Conductor's Monthly* declined to publish Belknap's utterances. It hadn't the courage of conviction.

It is this cowardice, this vulgar duplicity that has made it necessary to organize the Brotherhood of Railway Conductors. Hypocrisy is not popular. Honest men will not tolerate it. The time has come for workmen to be manly, to have the courage of conviction—to demand their rights with dignified independence, and this Belknap advocates in private, but when he issues a circular with the permission of Wheaton, his utterances are hypocritical and deceptive. Such duplicity, indorsed by the Grand Chief of the O. R. C., when known, must of necessity lead to disintegration. No order can live long that so outrages the decencies and proprieties of life. The conclusion must be, from what Belknap says, that railway officials have a supreme contempt for the O. R. C. They pay no attention whatever to the grievances of its members. When they want a member of the order to scab, or to perform any menial duty, the member obeys, and when the member has a grievance he might as well expect to "warm the world" by breathing on a "frosted" window pane, as to expect that a railway official will grant his request.

The circular and address illustrate the disgusting methods to which a certain class of men will resort to win approval, and the address points to the circular with merited scorn, and to compare the two documents extorts the verdict that such tactics merit universal contempt.

AN exchange remarks that every dollar put into railways in the country has developed a hundred, and increased the wealth of the nation in that proportion. And still there are those who try by fair means and by foul to cripple and embarrass the wonderful agencies of progress and prosperity. The granger whose property has been increased in value tenfold, pretends that he believes the railroad his greatest enemy, but whether he is honest in his opinion, the *Gazette* does not pretend to say.—*Railway Service Gazette*.

For instance a granger, living within a

hundred miles of a market for his products, found, under the "long and short haul" theory of railroads, that a granger living a thousand miles from the same market, could get the products of his field and farm into market at a price which made nearness to market worse than remoteness. If it is true that the grangers' property has been increased "ten-fold" by railroads, it ought to be shown what has been the increase in the value of such things as the granger has to sell.

THE Brotherhood of Railway Conductors is having a success that meets the fullest expectation of its founders. The Brotherhood is moving eastward from the Pacific slope and Divisions are being organized at various points, and applications for charters are pouring in upon the Grand Division. The more the purposes of the Brotherhood of Railway Conductors are studied the stronger becomes its hold upon the regards of conductors who have the welfare of labor at heart.

The business of firing passenger conductors goes steadily forward. On the C., H. & D. they have been required to step down and out, and word comes from Thornton, O., that a clean sweep has been made on the T. & O. C. These conductors, under the leadership of Messrs. Wheaton and Daniels, displayed, what is rightly called, "dishrag fidelity," to corporations, and are receiving their reward. Selah.

"THE O. R. C. usually receives what it asks for," says the *New York Dispatch*. It didn't ask for Thiel's spotters to be put upon the track of conductors on half the roads of the country, paid liars, who for pay, would swear away the character and liberty of the best railway conductor in the service. Did the O. R. C. ever ask to have the Thiel spotters called off? And did it succeed?

WHATSOEVER things are true, whatsoever things are honorable, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things.—*St. Paul*.

Don't forget that *expulsion* is the penalty for non-payment of Dues. See notice in another column.

RECEIVERS will take notice that there will be no beneficiary assessment levied for the month of April.

SEE notice of Dues elsewhere. Last day of payment May 1st.

THE C., B. & Q. PLAYING A NEW ROLE.

In the *Chicago Herald*, of March 10th, appears a brief outline of a scheme set on foot by the C., B. & Q., designated by the *Herald* as "The Burlington Road's New Plan." It is claimed that the Burlington roads have 38,000 employés, and the purpose of the "plan" is to tie these employés to the road by the organization of an insurance adjunct, which shall take the place of the beneficiary features of the various brotherhoods of railway employés—the real purpose being to disintegrate and finally destroy such brotherhoods.

The solicitude of the C., B. & Q. corporation for the welfare of its employés is in all regards similar to that which a wolf has for a lamb, or a hawk for a chicken. For heartless disregard of the welfare of its employés its reputation is as thoroughly established as that a rattlesnake will use its fangs or a vulture its beak and claws—and this fact is as widely known as that cholera, yellow fever, small pox and similar scourges will kill their victims. This "new department," says the *Herald*, "will be under the supervision of an advisory committee of thirteen, six members of which will be elected by directors of the Burlington road and six by the members of the relief fund. The general manager of the company will also be a member of the committee. The department will be conducted by a superintendent, appointed by the president of the Burlington Railroad Company. The superintendent will be aided by an assistant superintendent, and, when the department is in full operation, by a corps of some twenty clerks and some twenty-five medical examiners." The information is given that the scheme will operate "substantially the same" as similar schemes inaugurated on the Pennsylvania, and the Baltimore & Ohio Railway systems. There should be no misunderstandings of these schemes by railroad employés. They should be thoroughly analyzed and their real purpose vividly defined. In the first place, railway corporations are not now, nor were they ever organized for the benefit of their employés. There is not one fact on record to justify such a conclusion, while there are ten thousand facts which lead to and confirm contrary conclusions. Railway corporations, and all other corporations, are hostile to labor organizations. We state the rule. There may be exceptions; if so, they are like angel's visits, few and far between. These corporations, having failed by every method they have tried to abolish labor organizations, have concluded to try the "beneficiary scheme." It is upon the plan adopted by the spider when it lured the fly into its "parlor." It is a "soothing syrup" scheme. The corporations finding that labor was aroused, that its organizations were gaining in strength, efficiency, intelligence and inde-

pendence, have, in some instances at least, changed their arrogance to cajolery, and what they could not do by presumption and baughty domineering they hope to accomplish by flattery and chicanery.

They assume, and rightfully, too, that workmen are profoundly solicitous for the welfare of their wives and children. They are strongly impressed with the fact because they see that the various brotherhoods annually pay out thousands of dollars to the wives and children of their members who died at their post; hence, the corporations conclude that if they can establish a "beneficiary" attachment to the corporation they can wean their employés from the brotherhoods and irrevocably bind them to the roads upon which they are employed, and this done, they know they have the employés in their power. Up to a certain point they reason well. The officers of the corporations are students of human nature. They say in effect, "If we can detach the employés from his brotherhood, if we can influence him to pay his money to us instead of to his brotherhood he will be our man, for 'where his money is there will his heart be also.'" This being accomplished, they hold that the employés will belong to the road as certainly as its engines or its cars—that there will be an end of grievances and all other infelicities growing out of the independence and self respect of employés. The employés, having paid in his money to the corporation, can't afford to quit, and for the welfare of wife and children, he will yield, and bend and crawl rather than assert his manhood.

It will be observed that in the scheme started by the C., B. & Q. for the enslavement of its employés, the employés has no more voice in it than the ties in the road bed, no more than so many mules. All the employés has to do is to pay in his money and sit dumb as an oyster. He belongs to the road. He is counted in the assets of the corporation as in former times the serfs of Russia were a part of the estate of the land owner. He becomes a sort of chattel. His insurance policy may be worth something if he remains, if he quits he loses all, and the corporation gleefully says, "We've got him."

The scheme of the C., B. & Q., by virtue of which it hopes to contribute something in the way of disbanding the brotherhoods of railway employés is set forth in the *Herald* as follows:

Membership is entirely voluntary. The Burlington Company will pay all the operating expenses of the department, amounting to some \$80,000 per annum, so that every dollar contributed to the fund by members will be paid out to sick or disabled members or to the families of deceased members. The company will take charge of the funds, guarantee the safe keeping and proper disbursement of the same, guarantee the safe investment of funds not needed for immediate use and pay interest on monthly balances in its hands at the rate of 4 per cent. per annum. During the first six months any employé

may become a member without regard to age and without passing a medical examination, the only condition being that he shall at the time of his application be able to do enough to perform his regular duties. After the first six months no employé will be admitted who is over forty-five years of age, and no employé will be admitted who fails to pass a satisfactory examination.

The contributions vary from seventy-five cents to \$3.75 per month, according to class. The regular contribution is all that any member can be called upon to pay. There is no assessment and no charge for admission fee, initiation, certificate, medical examination, or any extra.

The benefits to which the members are entitled by the above regular contributions vary from fifty cents to \$2.50 a day. In case of accident in the service, the member is entitled during disability to benefits at full rates for fifty-two weeks, and at half rates thereafter. He is also entitled to surgical attendance free as long as such attendance may be necessary. In case of accident occurring to a member while he is not in discharge of duty for the company he is entitled, during disability, to full rate for fifty-two weeks.

In case of sickness he is entitled during disability to full rate for fifty-two weeks. Death benefits vary from \$250 to \$1,250. Additional death benefit may be secured, so that the total death benefit will vary from \$4,000 to \$5,000, according to class, by the additional payment of thirty cents per month for each \$250 of additional death benefit.

If a member is injured while in the discharge of duty for the company he is not prevented by his membership from bringing suit against the company to recover damages, but he may either sue for damages or accept the benefits of the fund.

The foregoing should be carefully studied by every railway employé. In the first place, the C., B. & Q. would have its employés to believe that it will put its skinny fingers, which have been trained to robbing its employés, into its empty pockets and pay out annually \$60,000 in token of its love for workmen. As well believe that the devil would run an ice cart between the north pole and hades for the special accommodation of Paul Morton. The company assumes to have 38,000 employés, who are to pay from .75 to \$3.75 a month to officers of the "Insurance Bureau." Suppose the average is \$2.00 per month, then these employés would pay annually \$912,000 into the bureau—or trap—and for its honest disbursement the employés have no guarantee except the integrity of the C., B. & Q., which, to say the most and the best, is malodorous in the estimation of all honorable workmen. As a business proposition, workmen should never pay their money into any lock up to which they have no key, and when such a demand is made upon them it is *prima facie* evidence that roguery is at the bottom of the scheme—the tracks, like those to a slaughter house, all point inward, and the more plausible the scheme, the more dangerous it will be found to be. The times are degenerate, fraud is rampant. Theft and embezzlement are rife. Schemes for defrauding the unsuspecting are being daily unearthed. The C., B. & Q. system, if not absolutely bankrupt, is in a financial condition to arouse suspicion that its "beneficiary scheme" is without

any honest purpose whatever, and of all the corporations in the country, not one has a reputation for purity that bears any approximate relation to that of the C., B. & Q. And its new scheme, with its army of officers and clerks, its intricacies, red tape and circumlocution, should be a warning to all level-headed railway employés to keep out of it—to shun it as a pestilence.

But after all, the corporations that are seeking to overthrow labor organizations are making fatal mistakes in their estimate of the men who compose them, nor are they more fortunate in their estimate of the purposes these organizations have in view. Brotherhoods of railway employés, it were folly to deny, take a profound interest in the beneficiary features—but money is not the only consideration, that is to say, benefits. Labor organizations are animated by a determination to everlastingly put an end to class legislation, to repeal laws which degrade labor and deny workmen their rights. They are not opposed to capital, but they are opposed to an aristocracy of capital, and to the degrading wrongs which such an aristocracy imposes. In the mighty mustering and massing of the forces of labor the corporation reads its doom, and hence we have the inauguration of schemes designed to disband such organizations. Here and there more or less success attends them, but when a wider survey of the field is taken it is seen that the great heart of the working men of the country beats high for independence, and that the decree has gone forth to achieve victory.

* *

WORD comes from France that the courts of that country have recently rendered a decision which establishes an important precedent, and will help to make the trades unions of that country more permanent. The journeymen hatters union entered a suit against a member for refusing to pay his dues for the year 1887. The court ordered the defendant to pay his arrearage in dues, fines and assessments and the cost of the trial; and to continue the payment of dues, etc., to the union. The courts of France seem to hold, that trades unions are a good thing, and should be supported.

* *

WE acknowledge the receipt of a beautiful little souvenir of the Twelfth Annual Ball of Boston Lodge, No. 57, given Thursday evening, February 21. The pretty keepsake comes in the shape of a cushion with "Boston Lodge, No. 57, B. of L. F." tastefully wrought in beads of various colors, which form the title page of the programme of the ball. While not costly such mementoes are highly valued by those who receive them, as remembrances of pleasant occasions and friendships formed and strengthened.

BILL THROTTLETON, MY BILL BOB.

Bill Throttleton, my Bill Bob,
When you and I first met,
The rain was mighty damp, Bill,
And you were limp and wet,
Yes, you were wet and cold, Bill,
And you didn't play the snob,
And put on lofty style, Bill,
Bill Throttleton, my Bob.

Bill Throttleton, my Bill Bob,
About ten years are gone,
Since you wandered to the round-house, Bill,
Wet, ragged and forlorn,
You wanted to be a greaser, Bill—
Didn't care about the job,
So 't would bring you three square meals a day,
Bill Throttleton, my Bob.

Bill Throttleton, my Bill Bob,
What makes you feel so proud?
What makes you strut and swagger, Bill?
What makes you talk so loud?
When now you meet a fireman, Bill,
You pass him with a nod,
To impress him with your magnificence
Bill Throttleton, my Bob.

Bill Throttleton, my Bill Bob,
You are now an engineer;
You've forgotten pick and scoop, Bill,
And are standing on your ear.
You wear the finest clothes, Bill,
And try to act the snob,
But you're rated a dampfool, Bill,
Bill Throttleton, my Bob.

Bill Throttleton, my Bill Bob,
As you were passing by,
I heard a pretty girl inquire
"What makes him step so high?"
The laughter rippled loud, Bill—
You could have heard it fifty rods—
To see you act the big mogul,
Bill Throttleton, my Bob.

Pony.

* * *

THE *Firemen's Magazine* never rejoices in the downfall of any labor organization. It greatly prefers to aid them as opportunity offers, and to the extent of its ability, to achieve success. But the O. R. C. having totally failed "to meet the requirements of organized labor," ought not to be referred to as a labor organization at all. It is not and never was in sympathy with labor. We refer to the very small majority of the Order that, so far, has been able to control its policy. The large minority are loyal to labor, and would be glad to see the O. R. C. change its policy. The minority long since discovered that to

"Crook the pregnant hinges of the knee"
in the hope that

"Thrift may follow fawning"

does not succeed always, and seldom with the members of the O. R. C. It don't get them any nearer "the throne." On the contrary, the corporation, seemingly at least, regards this degeneracy of the majority of the O. R. C. as a bid for recognition, which it persistently ignores. In confirmation of this we are creditably informed that one Henry Wells, an old O. R. C. man, has been appointed Traveling Conductor of the Southern Pacific railroad system, with headquar-

ters at San Francisco, and that since his elevation, eleven O. R. C. men have been "fired bodily," and no reasons assigned for their discharge. In such cases the O. R. C. simply accepts the degradation of its members without protest, and continues to recommend scabbing, as usual. Messrs. Wheaton and Daniels accept the situation with bowed heads and prate of the glorious "future" in store for the conductor, "when all of them will stand on the top round of the ladder. But the way they are climbing on the Southern Pacific is a sort of down grade affair. This thing of requiring a conductor to surrender his punch, brass buttons and other insignia of office, without assigning a reason for the degradation, is not only "firing" a conductor, but it is shooting him dead as a mackerel, without so much as giving him a "Judge Lynch" trial. Possibly, when Messrs. Wheaton and Daniels are together they colloquially discuss matters something after the following style:

Says Wheaton to Daniels, "The Southern Pacific
Is firing Our men in a way that's infernal.
Don't you think we had better say something
terrific
In the next issue of the O. R. C. Journal?"

Says Daniels to Wheaton, "There is no use in
blabbing;
Our duty is clear, we must recommend scab-
bing.
We're non-resistants; that's well known to you,
To the Southern Pacific and the C. B. & Q.
And s'pose we should kick? H—I, can't you see
We'd play into the hands of the B. of R. C.?"

"Daniels, you'r right, but, gods! I am tired
Of hearing the news of our men getting 'fired.'
Let us swing round the corner and get in some
lunch,
And wash it down with a liquid nickel-plate
punch."

POCAHONTAS COAL.

We ask special attention to the advertisement of "Pocahontas Coal," which is to be found in this issue of the *Magazine*. Railroad Managers are financially interested in securing the best quality of coal, and we notice that sixteen roads of New England and the Atlantic seaboard, after exhaustive trials, award superiority to the Pocahontas coal. It is positively asserted that Pocahontas coal will generate more steam in less time than any other American coal, and as all the coal is consumed, it produces no soot, consequently the flues of the boilers are kept free from obstruction. An exhaustive analysis of Pocahontas coal made by an eminent English chemist, shows the Pocahontas coal to be equal to the best Welsh steam coals, than which none better are known. Such facts, when known to engineers and firemen, cannot fail to give the Pocahontas coal the first place in their esteem—and their recommendation has, as it ought to have, proper weight with railroad managers.

A NOTABLE SOCIAL EVENT.

Nothing is better calculated to thrill the American heart with ecstasy almost divine, than to participate in celebrating Washington's birthday, and even to read of honors paid to the memory of America's most illustrious son, is scarcely less delightful. Washington was born on the 22d day of February, 1732, and though 157 years have joined the centuries gone since Heaven gave Washington to America, his name, its glory and its worth, is as dear to the hearts of his countrymen, as it was when he was struggling for independence.

And so it shall be, while eternity tarries,

And pauses to tread in the footsteps of time;
The bid of the tempest, whose quick platoon carries

Our arrows of vengeance, shall hover sublime;
Wherever that flag on the wind shall be rolled,

All hearts shall be kindled with anger and shame

If e'er they are told,

They are careless and cold,

In the glory that circles our Washington's name."

In doing homage to the name of Washington, nothing could be more in consonance with elegant and refined proprieties, than to bear testimony of loyalty to world acknowledged virtues, under the auspices of the ladies.

We have on our table, the Jersey City *Argus* of February 23d, in which we find a well written account of a number of celebrations of the birthday anniversary of the "Father of his Country." Of these the *Argus* says:

Doubtless the most numerous and attended and exclusively brilliant event ever held in Pavonia Hall, was the anniversary reception and ball of the Adopted Daughter Lodge, No. 3, Brotherhood of Locomotive Firemen, held here last night. The finely decorated hall, with the brilliancy of the company assembled made a scene of dazzling beauty, brighter than any that has preceded it. The decorations were profuse and artistic, attracting attention to every point and in the centre of the room was located a fountain of cologne sending forth its delectable perfume. The balcony was occupied by Prof. Ellis' Orchestra of New York, and good music was provided to guide the revellers through the mystic dance. While the floor was filled with dancers, there were an equally large number of spectators, occupying the surrounding gallery, who seemed to take equal delight in gazing upon the movements of those upon the floor. The pleasure commenced at half-past ten o'clock with the grand march, led by Floor Manager Charles W. Martin and Mrs. J. B. Sweet, who was attired in a white corded silk with black lace over dress. About ninety couples joined in the grand march, among whom were Mr. J. B. Sweet and Mrs. Martin, who wore a heavy black silk with jet ornaments; F. A. Barry and wife, the latter in white silk with cream lace over dress and pearl trimmings; Mr. H. Bachman and Miss Donnelly dressed in white silk with diamond ornaments; Mr. Henloyne and Miss Van Bresser looking graceful in a bi-litrope alstroemeria; Edward Alfers and Miss Lillie Donnelly, olive plush and pearls; D. Mahoney and Miss Huckleby, of Philadelphia, black corded silk and diamond ornaments; Louis Mahoney and sister, of Philadelphia, brown satin dress, white lace trimmings and low corsage; Charles E. Benter and wife, who wore Nile green silk; Mr. Spencer and Miss

Jones in velvet, surah and plush; Charles W. Plant and Miss Carey, of Philadelphia, in pale blue silk and white lace, low corsage; Mr. Brozier and Miss Dean, who wore orange silk skirt and olive green plush waist; Mr. and Mrs. Shultz, the latter wearing black silk with jet ornaments; Mr. Corbitt and Miss Bailey attired in white lace with pink trimmings; T. Mooney and sister, white silk with Nile green trimmings; Robert Godfrey and Miss Nellie Manning dressed in red plush; Miss Caston, under escort of Mr. F. L. Hopper, wore red satin with lace trimmings. Mrs. E. Reynolds, accompanied by her husband, was attired in black silk, lace trimmings, with corsage of tea roses. John R. Nice and wife, black silk and jet ornaments. A. Bradley and Miss Walsh, cream surah and lace; Mr. Baker and Miss Emily Jones, surah and old gold plush; Mr. Towle and Miss Belle Morie, who wore bottle green silk; Miss Demarest, in company with Mr. John Bars, had on a heavy black silk with black lace overskirt. Miss Winner wore a pale blue brocade silk. Mr. and Mrs. G. R. French, Mr. and Mrs. H. Fleigel, Mr. and Mrs. J. Garretson, Mr. and Mrs. J. Bennett, J. Donnelly and Miss Mamie Riden, Wm. Jelly and wife, B. Cogh and wife, D. Mahoney, sister and lady, A. Oppenheimer and Miss Jacobs, W. Schwenck and Miss Aonle Wayue, R. Badman and wife, James Barry and wife, Mr. and Mrs. George Blakey, Mr. and Mrs. Thomas Keeley, Edward McManus and wife, William T. Casewell and sister, J. Amble and wife, Frank Lozier and wife, W. Middleworth, Thomas Connors, Charles Plant, J. McDonald, Stephen Wyles and J. S. Lent, J. Hall and Miss Fagan, W. C. Johnson and wife, H. Holland, Engineer No. 53, P. F. Doyle of Central Division No. 157, D. L. & W. R. R., with two ladies from New York, F. McNally, Yardmaster, and John Spear, Assistant Yardmaster at Harrison's Cove, Arthur Bugert, of Washington Lodge B. of L. F. with ladies, Jos. Memser and Etwa D. Rhodes and H. Hares, of Washington Lodge, Engineer Al Bird and wife, Mr. Denning, Harvey Jennings and Miss Emma Smith, Freeholder Kilroy, and hosts of others.

The company was filled with merriment and sociability and nothing occurred to mar the enjoyment of the festivities which were continued until the dawn of day summoned the railroad boys to the responsibilities of another day. The officers under whose able management the affair was so successful, were D. W. J. Mahony, chairman; Garret P. French, director; C. W. Martin, floor manager; Howard Bachman and Jacob Boehm, assistant floor managers; J. B. Sweet, C. A. Smith, A. Harris, James Welsh, E. McManus, C. Hanson, F. L. Hopper, Chas. E. Benter, F. Keala, C. W. Plant, James Riley and F. G. Egan, floor committee. Reception committee, George Aucter, chairman; R. R. Thoruhill and J. H. Vorhis, assistant chairmen; Clerk B. Galt, Wm. Sweet, A. A. Hamel, E. P. Hutton, P. Logan, H. A. Decker, Jos. Hall, J. A. Barry, C. A. Denning, J. Capner, Jr., H. E. Johnson, T. Mooney. Committee of arrangements, D. W. J. Mahony, chairman; George Aucter, Jr., H. Noorick, R. R. Thoruhill and G. R. French. All the different railroads and Lodges of Brotherhood were largely represented.

We devote more than usual space to this event, because the ladies ("God bless 'em,") of Adopted Daughter Lodge No. 3, of the Brotherhood of Locomotive Firemen, originated the patriotic and delightful affair, and are entitled to the most generous baptism of praise the *Magazine* can bestow. The "Adopted Daughters" of Jersey City have set a splendid example. They know how to organize success, and their sisters throughout all the jurisdiction of the Brotherhood can do the same when they set their heads about it.

That they will have the coöperation of

"the boys," goes without the saying,—it is one of the fixed facts. They will find everywhere men of the chivalric culture and courage of Bro. D. W. J. Mahoney, who acted as chairman of the committee, and who has a go-ahead gallantry which inspires confidence in the minds of associates; indeed, the *personnel* of the various committees was such as to win the gratitude of the ladies, and we are not surprised that the "wee sma' h' urs" were disregarded, and that the shibboleth of the ladies and gentlemen was, "We won't go home till morning." We are not in the habit of croaking over what can't be helped, but in this case, we must say, we regret we were not of the happy company.

It affords the *Magazine* special pleasure to welcome the *Denver Patriot* to its exchange list. The *Patriot* is under the editorial control of L. W. Rogers, Esq., a member of the B. of R. B., than whom those who can wield a more aggressive pen are few and far between. The *Denver Patriot* is a continuation of the St. Joseph. Mo., *Patriot*, which in going west "to grow up with the country," enlarges its sphere of usefulness and instead of being strictly a railroad journal will in its new field be the "organ of laboring people without regard to calling or condition." The traveling solicitor of the *Patriot* is Mr. C. H. Griffith, of the B. of L. E. who is known to be wide-awake and well qualified to represent the interests of the enterprise. The *Patriot* is published under the auspices of the "Patriot Publishing Company," with Mr. James Glynn President, and Bro. W. F. Hynes, of the B. of L. F., Treasurer. The business and editorial team of the *Patriot* is in all regards a strong one, and we bespeak for the paper a wide circulation and a large measure of success. In the *Patriot*, Labor will have a fearless champion—one well deserving its confidence and patronage. As a co-laborer in the same field of journalism, and animated by the same high ambitions, the *Magazine* most cordially welcomes the *Denver Patriot*. All that is wanted is for the labor organs to pull together, and the shout of victory at no distant day, will be heard all along our lines.

Mr. Chas. Prudhomme, a prominent member of the B. of R. C., has been appointed Superintendent of the Los Angeles & Pacific Railway, with headquarters at Los Angeles. No better appointment could have been made.

KICK 'EM OUT.

The B. of L. E. at Frisco took the firemen by the nose, and led them to the door, and said "hereafter we propose To keep you out of our conventions, no matter how it seems, And we'll give the B. L. F. another dose, when we go to New Orleans."

STRICT NEUTRALITY.

Once there was an old woman whose husband had a fight—
Had a fight with a bear, of blood-curdling brutality,
But the woman went on knitting, and seemed to enjoy the sight,
Saying, "as 'tween the old man and the bear, she was for 'strict neutrality.'"

THE manual of exercises of Adopted Daughter Lodge No. 3, on the occasion of its eighth anniversary, was an artistic piece of work, and attracted wide attention. It was gotten up in the form of a book of ninety-four pages, and contained the history of the Order, sketch of the Grand Master's life and numerous other sketches, poems and illustrations of an interesting character. The dancing programmes were also very beautiful and attractive. Adopted Daughter Lodge No. 3 is blossoming out as one of the most enterprising in the Order.

A VERY important movement has been started, having for its object the bringing about of an amicable understanding between all the national and international labor organizations now in existence, and at a conference held in Philadelphia, February 14, very satisfactory headway was made. A number of prominent men identified with labor organizations met in Philadelphia, on the day named and the following resolution tersely states the purposes in view:

Resolved, We hold that the interests of all classes of labor are identical, and hence all organized labor should work together in harmony, and we believe the time has come when trades unions, Knights of Labor and all others should clasp hands and march together for the advancement of the working classes.

The resolution embodies facts of great importance, and states a platform upon which all labor organizations can stand and work together for the good of all.

THE amount of possible blundering in a country as large as the United States is enormous. The Postoffice Department alone records, for the past fiscal year, 6,250,000 pieces of original dead mail matter received at the Dead Letter Office at Washington—an increase of nearly 1,000,000 over last year. Nearly 5,000,000 of these were ordinary unclaimed letters; 173,700 were sent abroad to foreign countries and returned as not deliverable. The number held for lack of postage is only 121,000, which is not so large when we consider the chances in favor of such carelessness. These last letters contained over \$35,000 in money, besides a very large amount of negotiable paper, amounting to over \$1,000,000 face value, besides postal notes to the value of \$5,000. This does not include other property unclaimed. This report covers a vast amount of pure heedlessness.

THE LANGUAGE OF THE WAVE.

I had come to visit Galveston; was walking on
the beach,
Where the shells and salty sea-weed strew the
strand.
A sense of awe and wonderment bereft me of my
speech,
When a stranger came and took me by the
hand.

"Dost thou sicken?" said he. "Brother, thy face
is like a child's
As he views the panorama in a show."
"O, no," I answered kindly; "but the waves
they look so wild!
See the waters, how they come and how they
go."

I had felt this same awfulness, so strangely wild
and sweet,
When, clinging to the cliff with foot and hand,
I looked down in the Royal Gorge at the iron
horse so fleet
That was dashing down the Denver'n Rio
Grande.

I love my little mountain home beside the rip-
pling rill,
And the Colorado sky so bright and blue,
Where the mountains in the moonlight stand
motionless and still;
Where the heliotrope and hop-vines catch the
dew.

I love the little flowers, for they tell us o'er and
o'er
That there's hope for those who're good beyond
the grave;
But, oh! I love to linger where the waters kiss
the shore,
And I'd like to learn the language of the wave

KEELY OUTDONE.

New York World.

In a top loft on a quiet block in Marion street a number of men have been working for months past busy over lathes and planers and vises, getting out queer-shaped bits of metal and fitting them into a great frame standing in the middle of the floor. The door of the loft is kept closely locked and the visitor is sharply scanned and questioned before he is admitted into the noisy workshop. The contrivance, which is slowly assuming shape, is a non-exhaust steam engine, the invention of a man named E. D. Speer, of Cincinnati, but late of New York. Now and then an investor is brought up into the loft. There is a great deal of talk from Inventor Speer, a rush of explanations, which do not materially explain, and then the happy visitor goes away with a certificate of stock safely tucked away in an inside pocket and for which a good round check has been exchanged. There is in all \$5,000,000 of this stock to be sold before the

Non-Exhaust Steam Engine Company will who have studied steam-engineering for years smile when they hear the mention of a non-exhaust steam engine, and mutter the names of Paraf or of Keely or the thermic motor or the electric-sugar folks in the same breath in which they pooh-poo the contradiction of a non-exhaust steam engine. All steam engines nowadays are either of the high-pressure sort, exhausting directly from the cylinders the steam which has done its work in forcing the pistons, or the engine may be of a low-pressure type, in which the exhaust steam passes into a condenser, where it is resolved back into water again. This condenser, being a partial vacuum, acts to that extent in relieving the idle side of the piston from the atmospheric pressure of fifteen pounds to the square inch.

In the Speer engine the steam passes to the cylinder, does its work, then passes back to the boiler, gets warmed over to make up for the natural loss of power and heat from radiation, and so goes on indefinitely working away, so that once the steam is up in the boiler the effort of the fireman will be a sinecure of the softest sort. He will simply have to keep the fire from going out, and the engine will go on until something wears out. "Why," said Mr. Speer, as he stood by the heavy mass of metal and did not know he was talking to a *World* reporter, "we save 95 per cent. of the power of the fuel. You see we have two cylinders on each side of the frame. This is a 100-horse power engine, and the cylinders are 10x12 inches. The pair of cylinders on one side take the steam direct from the boiler. There is no cut-off, and the steam is taken the full length of the stroke. The pistons connect with either end of a stout rock-shaft, so that when the stroke is over and the fly-wheel has made a half revolution the shaft on that side separates for the return stroke, and the motion is kept up by the pair of cylinders on the other side of the frame."

"But what of the steam supply in the first pair of cylinders?"

"Why, don't you see that, as one works forward and the other backward in making the stroke, when the rock-shaft breaks the pressure in one cylinder exactly neutralizes the pressure in the other and with the little finger they can be moved, so that but a very small effort on the part of the live cylinders on the other side of the frame throws the first pair of pistons into position for their second stroke?"

Such lucid explanations as this have been given out by Mr. Speer until he seems to believe them himself, and he certainly repeats them with a glibness born of much repetition. Over in a corner is the only working model of the invention. It is almost a toy, but it has a record of one complete revolution. This fact was accomplished before an

have cashed in all its nominal capital. Men interested and, at the finish, delighted company of investor spectators. Steam was not used, but instead a tank somewhat like a domestic hot-water kitchen boiler filled with compressed air. There was a gauge indicating forty-five pounds pressure to the square inch. Two pipes led from the tank to the engine, one to either set of cylinders. One stop-cock was opened and the pistons on one side pushed over the miniature fly-wheel; a quick motion cut off the air from this side, and the opening of another stop-cock allowed it to flow in on the opposite cylinder, and the fly-wheel completed its revolution. There was a drop in the pressure gauge from 45 to 5 pounds. The wheel had turned once, the demonstration was complete, and there was a clamor for more stock. Had any of those present been able to see wind, they would have seen that the air merely pushed over the crank and then ran into the atmosphere without. Instead of being non-exhaust, it was pretty much all exhaust. At first it was thought possible to start the company in Cincinnati, but that town was too small or capital too wary, and so the shift was made to New York, and from the quantity of stock sold and the air of prosperity in the preparations the change has so far been a profitable one.

The proprietor of the shop furnishes the men and quarters, and carries out the orders of the voluble inventor without expressing any very decided opinion of his own as to the possibility of the machine doing what is claimed for it. There was a German draughtsman, Bergh by name, who made drawings of the various parts of the machine, under the directions of the inventor, and so long as his duty was to work on paper only he was content, but when he was expected to lend his assistance in explaining the working of the machine to the ladies and gentlemen who came to purchase stock he rebelled, and resigned rather than make wordy claims for a machine which as a mechanical expert he was convinced would never do what was asserted of it.

Now and then some cautious would-be-investor has taken a mechanical expert along to see what there was of the machine, as far as complete, to look at the drawings submitted and listen to the explanations of Inventor Speer. In such cases the investment was not made. Said one well-qualified expert, who had given the device a thorough examination: "When it is all complete the stockholders will have the old iron and brass in the machine to sell for old metal as an asset, and they will have nothing else. It is nonsense to talk of having the steam drawn from a boiler, doing the work in the engine and then going back into the same boiler. What becomes of the power of the steam? How does the inventor propose to

get it back into the boiler? The drawings show nothing, and there is no invention yet for any such chimerical scheme. In fact, it is doubtful whether there is any patent wanted. It is much easier to explain matters and tack on 'Patent Pending' or 'Patent Applied For' to the circulars sent out to the lambs. If the United States Patent Office will issue a patent on this, then it might as well at once send out papers for a perpetual-motion machine. It is possible that some device about this queer mechanical anomaly may be patented, but as for getting a patent on a non-exhaust engine, that is simply a rank bit of nonsense."

In the shop, beside the slowly rising first copy of the non-exhaust engine, is a device which to many of those who come on speculation bent to the shop is more fascinating even than the engine itself. This is a combination of three wheels, which the same inventor calls the "Power Multiplier." Not content with setting the laws of mechanics at defiance in the big engine, he has flown directly in the face of every axiom of mechanical science by making something from nothing. It is not merely getting speed at the expense of power, or power at the expense of speed, which is done in a thousand ways in all manner of mechanical contrivances, but the claim is made that the third wheel of the series of three has more power than the first one. "Make the third wheel the first of a new series, and so on, and you would soon be able to run a great steamship with a dollar-toy engine," said the expert, who had gone over the whole wondrous property of the company and had been taken in neither by the non-exhaust engine nor the wheel-power creator.

"It is surprising," he went on, "to find how easy it is to cajole money out of people by some jumble of machinery explained by a fluent tongue. A dealer in feathers came down to the shop and he lost no time in getting stock at way down first chance prices. A prominent lawyer who was first class at law work, but imagined he knew all about mechanics, took a slice of stock and so on all through the list. You don't find such big power users as the electric light companies or the machine shops trying to get stock. No; they are content with their present engines, or at any rate want to understand the contrivance they are buying stock into. If this affair ever comes to a head it will prove a second Keely motor concern. There will be secret rooms and renewed experiments until the patience of the stockholders gives out and then there will be a big row. I must admire the supreme confidence of the man, however, who came out with two such self-evident bits of mechanical impossibility as a non-exhaust engine and a power-creating trio of wheels."

CREMATION IN JAPAN.*Correspondence of the North China Daily News.*

A few days ago an occasional correspondent in Hang Chow sent you an account of cremation among the Chinese. Perhaps a short account of cremation among the Japanese will interest your readers. The Japanese almost universally burn their dead. If the body is to be buried it is squeezed in a sitting posture into an earthenware jar. If to be burned, it is placed in a similar manner in what the Japanese would call a coffin, but what every one else would call a tub. In either case the appointed receptacle is so small that it is only with great difficulty that the body is placed within it. The body having been placed in the tub and the lid fastened on, it is stood in what in India would be called a palanquin, to be carried to the place of burning. Around Kobe several of these places may be found. One in the hills just above the settlement consists of a large barn-like structure built of brick, roofed with tiles. In this building six bodies may be cremated at one time. One enters from the porch through large doors; the interior is black with smoke, which finds its way out through venetian shutters which run all around just beneath the roof. On the floor are six long troughs, across which the firewood is placed upon which the coffin rests. When all is ready straw mats are placed over the coffin. These, when ignited, soon set fire to the bamboo bands which encircle it, and it is not long before all is in a blaze. Another place on the hill above Hiego (E-yun Ya-ma, Ya-ki-ba) is much more elaborate. This building can be distinguished for miles by the high chimney which rises above it. It is in the hands of a private company, who have made such arrangements that there is nothing to offend either eye or nostril. There are several buildings connected with this establishment. The one in which the cremation takes place being distinguished by the before-mentioned tall chimney. This building is built of red brick, with very foreign-looking glass windows to light the interior. Upon passing through the doors one discovers that the red brick building is, so to speak, an outer shell, the actual place of burning being a very substantial erection inside. The whole place reminded me at once of an English bake house. In the outer wall were the foreign glass windows, in the inner, large iron doors. There were eight of these doors, raised about 2 feet from the ground, each door being about 4 feet by 3. Upon opening the doors a brick chamber or oven was seen within. The coffin, having been placed on the properly arranged wood and covered with blazing straw mats, was shut in by the iron door and left for the fire to do its work. All the chambers were connected with the tall chimney, so that smoke and everything unpleasant are

rapidly carried away and dispersed in the upper air. On the third day friends come and search in the ashes for the teeth and upper bone of the vertebra. These are carefully collected, placed in a little box and sent to the village or town where the deceased was born. There the box is placed upon the shelf before the family shrine. Boxes for this purpose very neatly made may be purchased in the premises. In conversation with a Japanese dentist, I asked what would be done in the case of an old man or one who had no teeth. He said if he found it necessary to extract a tooth, that tooth would be sure to be asked for by its owner, to be by him treasured up, that it might at some future time be placed in the little box and sent with the rest to the ancestral shrine. He added that it was elderly men chiefly who asked for their teeth; the younger men did not seem to attach much importance to it. The charge for cremation seems to vary from 80 cents to \$1 and more.

The shades of evening were closing in as I entered one of the lovely glens which abound in the Kobe Hills. As I traversed the winding path the young moon overhead shone brighter and brighter, and the stars one by one added their light as if to counteract the gloom of the rapidly advancing darkness. The silence was intense—no breeze stirred the motionless leaves. The distant whistle of some steamboat in the bay or the roar of some train on its way to and from Osaka were all that could be heard. Suddenly, upon turning a corner, a large building could be dimly seen on the rising ground in the distance. Volumes of smoke were issuing from beneath the roof, and through the large open doors the interior could be seen brilliantly lighted up. I advanced to the door and looked in. Strange was the sight that met my gaze. Three large fires were burning furiously, in each of which was a body in the act of being cremated. Through the blinding smoke I could see the figures of two men hovering about. These men, in their ragged clothing, looked scarcely human, as, armed with pitchforks, they silently moved from fire to fire, re-arranging the blazing logs or adding fresh fuel, as the occasion required. Such a sight held one rooted to the spot. Indeed, the large, gloomy building, the roaring of the flames, especially when contrasted with the quiet moonlit scene without, but, above all, the two ragged attendants, who, gliding about from time to time, with their pitchforks stirred the fires, sending showers of sparks up into the smoke-laden air above; all this presented a scene which, once gazed upon, could never be effaced from the memory.

Puck.—Britons in search of ruins in this country are invited to inspect the November crop of used-up campaign uniforms.

THE BRAVEST OF BATTLES.

The bravest battle that ever was fought,
Shall I tell you where and when?
On the maps of the world you'll find it not;
'Twas fought by the mothers of men.

Nay, not with cannon or battle shot,
With sword or nobler pen;
Nay, not with eloquent word or thought
From mouth of wonderful men.

But deep in a walled-up woman's heart—
Of woman that would not yield—
But bravely, silently borne her part—
Lo! there is that battle-field.

No marshaling troop, no bivouac song,
No banner to gleam and wave!
But, oh, these battles! they last so long—
From babyhood to the grave!

—Joaquin Miller.

RAILROAD GAUGES OF THE WORLD.

Railway Life.

From a comprehensive review of the history and development of the railroad gauges of the world by Herr Claus, in *Glaser's Annalen*, the following particulars in regard to the gauges of the world are extracted. After a battle of the gauges, 4 ft. 6 in., 4 ft. 8½ in., 5 ft. 0 in. and 7 ft. 0 in., it was agreed in England about 1848 that a uniform gauge of 5 ft. 8½ in. should be used on all new roads, except those already served by the 7 ft. 0 in. gauge. The first German road from Nuremberg to Furth was built with 4 ft. 8½ in. gauge, which is now used by all the principal roads of Germany, although there is a very considerable mileage of narrower gauges, mainly 1 metre, or 3 ft. 3½ in. France started her roads with a width between rail centres of 4 ft. 11 in., which has led to some slight variations of gauges, according to rail width. The later roads have been built with a gauge of 4 ft. 8½ in. Holland began with a 6 ft. 4 in. gauge, but has now altered all its roads to 4 ft. 8½ in. The Railroad Congress at Berne in May, 1886, adopted the following resolution, which is to apply to Germany, Austria-Hungary, France, Italy and Switzerland:

"The gauge of railroads measured between the inner edges of the rail heads shall, for roads built or altered as to gauge after this resolution takes effect, not be less than 4 ft. 8½ in. on straight lines, nor more than 4 ft. 9½ in. on curves."

In Russia the first road opened in 1838 from St. Petersburg to Zarskoe-Selo, about 16 miles, had a 6 ft. gauge. When the second road was made in 1842 from St. Petersburg to Moscow, the Czar, at the instance of our countryman, Major Whistler, fixed the Russian gauge at 5 ft., which increase over the English gauge was thought desirable for locomotive purposes. Major Whistler thought as wide a gauge as 6 ft. uncalled for. The 5 ft. gauge has continued the standard in Russia; but that it was not made different from the German gauge for military reasons, seems to be proved by the fact, instanced by

Herr Claus, that the lines built under imperial direction from Warsaw to Vienna, and from Warsaw to Bromberg (the Berlin line) were carried out with the German gauge. The history of American gauges is briefly and intelligently reviewed, without reference to the narrow gauges; the author confining himself to the standard gauges of the world for the most part.

Ireland has a standard gauge of 5 ft. 3 in.; Spain and Portugal, 5 ft. 6½ in.; Sweden and Norway have the 4 ft. 8½ in. gauge over the majority of their railroads, but 20 per cent. of the Swedish roads have other gauges varying from 2 ft. 7½ in. up to 4 ft. Norway has 592 kilometres of standard gauge and 970 kilometres of 3 ft. 6 in. gauge.

In Asia, of the British-Indian roads with a collective length of 12,366 miles, about 7,450 miles have a gauge of 5 ft. 5½ in., the remainder being divided among six gauges from 2 to 4 ft. Of the narrow gauges, the most prevalent, embracing 4,200 miles, is the metre, 3 ft. 3½ in. The Ceylon railroads have the standard Indian gauge. The Russian trans-Caspian lines have the Russian standard gauge of 5 ft. In Asia Minor the line Mudania Brussa has a gauge of 3 ft. 7½ in. The island of Java has 449 miles of 3 ft. 6 in. gauge and 126 with 4 ft. 8½ in.

In Japan, with the exception of an eight-mile piece begun in 1885, with a gauge of 2 ft. 9 in., all the roads have a 3 ft. 6 in. gauge.

In Africa, the Egyptian railroads amounting to 932 miles, are of the 4 ft. 8½ in. gauge. Algiers and Tunis, with 1,203 miles in 1884, had the 4 ft. 8½ in. standard on all except 155 miles, which had a 3 ft. 7½ in. gauge. The English Cape Colony had in 1885, 1,522 miles, all of 3 ft. 6 in. gauge.

In America, apart from the comparatively small mileage of United States roads with 3 ft. gauge, practically the whole of the United States and Canadian railroads are of 4 ft. 8½ in. to 4 ft. 9 in. gauge. In Mexico, in 1884, 2,083 miles were 4 ft. 8½ in., and 944 3 ft. gauge. In Brazil, at the end of 1884, there were 869 miles of 5 ft. 3 in. gauge, and 4,164 miles of various gauges between 2 ft. and 4 ft. 7 in., over 3,700 miles being 1 metre, or 3 ft. 3½ in., so that this may be considered the standard gauge of Brazil.

In Australia the different colonies, rather singularly, have different gauges, that of New South Wales being 4 ft. 8½ in.; Victoria, 5 ft. 3 in., South Australia, 5 ft. 3 in. and 3 ft. 6 in., and the other colonies 3 ft. 6 in.

The total mileage in operation in the world at the end of 1885 was 303,048 miles. Of this length, seventy-four per cent. were of the 4 ft. 8½ in. to 4 ft. 9 in. standard, 12 per cent. had larger gauges and 14 per cent. smaller.

Merchant Traveler.—It is considered very bad form for a ballet girl to pad unevenly.

A POLITICAL LABOR PARTY?

Chicago Knights of Labor.

A great deal of nonsensical talk is indulged in by labor agitators and labor papers relative to the formation of a new labor party based on some abstruse theories that the proposers themselves do not comprehend, and that the great body of wage workers if they took the trouble to study would simply laugh at. As a national organization a labor party or any other distinctively class party is played out. If any demonstration of that fact is needed we refer our readers to the returns of the late campaign. The Union Labor Party, which was supposed to represent the Knights of Labor, the Trade Unions, the Farmers Alliance, the Wheel, the Grangers, Anarchism, Socialism, Greenbackism, Free Land, Free Labor, Free Transportation, Free Banks and Free Lunch polled about one hundred and fifty thousand votes and that too after a campaign of brag and bluster such as was never indulged in by a prize fighter. A few notorious cranks, quack doctors, cheap lawyers, professional office-seekers, and political auctioneers, flock themselves in the various industrial centers, elect themselves delegates to a national convention and nominate some of their number for national offices, and then go home and try to sell their supposed influence with the working classes to one or the other of the old parties, and this is the beginning and end of a National Labor Party.

Before attempting to establish a reform party the advocates of reform should establish permanent and successful municipal, county and state organizations. The working classes can exert their power to a much better advantage by using their votes as a club to smash the head of that one of the other of the old parties that refuses to deal justly with them. In the meantime agitate, organize, educate for the eight hour day on the first of May, 1890.

CHINESE FAMILY QUARRELS.

People With Grievances Go Out in the Street and Howl.

Among a population of such unexplained density, says the *North China Herald*, where families of great size are crowded together—three or four generations, with all the wives and children, under one roof—occasions for quarrels are all-pervasive. The sons' wives and children are prolific sources of domestic unpleasantness. Each wife strives to make her husband feel that in the community of property he is the one who is worsted; the elder wife tyrannizes over the younger ones, and the latter rebel. The instinct of the Westerner with a grievance is to get it redressed straightway; that of the Oriental is, first of all, to let the world at large know that

he has a grievance. A Chinaman who has been wronged will go upon the street and roar at the top of his voice.

The art of hallooing, as it is called in Chinese, is closely associated with that of reviling, and the Chinese women are such adepts in both as to justify the aphorism that what they have lost by their feet they have gained in their tongues. Much of this abusive language is regarded as a sort of spell or cure. A man who has had the heads removed from his field of millet stands at the entrance of the alley which leads to his dwelling and pours forth volleys of abuse upon the unknown offender. This has a double value—first, as a means of notifying the public of his loss and his consequent fury, thus freeing his mind; and, secondly, as a prophylactic tending to secure him against the repetition of the offense.

Women indulge in this practice of "reviling the street" from the flat roofs of the houses, and shriek away for hours at a time until their voices fail. Abuse delivered in this way attracts little or no attention, and one sometimes comes on a man or woman thus screeching themselves red in the face, with not an auditor in sight. If the day is a hot one the reviler bawls as long as he—or she—has breath; then proceeds to refresh himself with a season of fanning, and afterward returns to the attack with renewed fury. A fight in which only two parties are concerned usually resolves itself into mere hair-pulling; the combatants, when separated by their friends, shout back to each other maledictions and defiance. The quarrel between Laban and Jacob, recorded in the thirty-first chapter of Genesis, when the latter stole away from Laban's house, is a photographically accurate account of the "truly Oriental performance which the Chinese call making an uproar."

UNDERSTOOD THE "Q"

The Frog.

At the time the strike took place on the "Q" the Travelers' Insurance Company owned stock in that corporation that was worth \$160,000. To-day that stock is worth \$122,000. Being a stock and bond holder it would seem natural for "Travelers" to fight for the "Q." But they didn't do it. They evidently considered the good will of brotherhood men and respectable workmen worth more than \$160,000 coupled with the Burlington scabs, and the "Travelers," we are proud to say, has never written a policy on the "Q." since the strike.

VIRTUE'S AUXILIARY REWARD.

Time.

Garçon—Monsieur has given me a counterfeit twenty-five cents.

Monsieur—Is that so? Well, keep it for your honesty.

SHE WASN'T A MOTHER.**A Railroad Conductor Deposits a Baby in the Wrong Lap.**

Conductor Provost, of the Pennsylvania's Long Branch road, made a startling mistake the other day, if a story in the Mount Holly *Herald* is correct. A woman with three children boarded his train. One of the children was an infant, which Conductor Provost gallantly raised in his arms, saying: "I'll bring it in to you, ma'am; just step aboard with the rest." The woman did so, the signal to start was given and Provost jumped aboard with the infant. He walked into the car and deposited the cherub, as he supposed, in the mother's lap.

"What's this for?" said the female passenger excitedly.

"It's your baby, ma'am," responded Provost, with a smile.

"My baby!" shouted the now thoroughly excited passenger. "Why, I'm a single woman; I never had a baby in my life!"

Just then the mother of the child called out: "Here I am; bring the baby here."

Provost at once made a profound apology, but the disgusted female passenger wouldn't look at him.

THE DEADLY FROG.**Tragic Fate of a Workman Whose Foot Became Fixed Between the Rails.****Jersey City Special.**

Picture a man held fast on a railroad track and an express train thundering towards him. See him struggle and tear at the cruel iron frog that binds his foot. Think of the mental anguish of his deciding in a second's space whether he shall be a life-long cripple or meet death at once. Then let imagination paint him with hands raised above his head and a whispered prayer on his lips. Another picture ends it. He has thrown himself in front of the train. This is the way John Trainor died.

He was twenty-five years old, and worked in the Delaware, Lackawanna & Western shop in Hoboken. He was a carpenter, and had started to cross the track to get a saw from the tool-house. An overdue train was hurrying on to gain lost time. When on the east-bound track Trainor suddenly stopped. His fellow-workmen looked at him in wonder, for the flying train was very near. Some one shouted to him to go on. Then they knew it all. He had jammed his foot in the frog, and in five seconds more the engine would be upon him. They saw him strain and struggle, but without avail. He tried to throw himself from the track, but the frog held him like a vice, and they were too far away to help him. He plucked at his shoe-string, but there was no time. Nearer came the train. The engineer saw

him from the cab window. His face blanched. The whistled shrieked and the engines were reversed, but there was no time. Trainor had made up his mind. There were two alternatives. To die or to be crippled for life.

By throwing his body from the track the car wheels would amputate his leg and leave him helpless. It was life-long misery or death. The awe-stricken workmen grouped at the shop door saw him suddenly straighten up. He looked from one side to the other. He raised his hands above his head as divers do when making a great plunge. He flung himself headlong to the iron wheels. The train thundered over him. That which had been a moment before a living, breathing man, full of strength and vitality, was gathered up tenderly, a crushed and shapeless mass. Trainor was unmarried, and the expenses of the funeral, which took place to-day, were paid for by the men who saw him die.

A FRIEND OF POOR BOYS.**New York World.**

A benevolent enterprise of almost startling dimensions, even in this age of large charities, has been undertaken by Mr. J. V. Williamson, of Philadelphia. He proposes to give \$12,000,000 for the establishment of an industrial school and home for poor boys. He has studied his plans an arranged for an intelligent use of this vast sum of money. Architects are already preparing for the erection of buildings and a board of seven prominent citizens has been selected to control the institution.

Unless the Stanford University, in California, should prove an exception, this is the most important gift to humanity on the part of any one individual in the history of the country, not to say of the world. It is doubtful if a better direction could be discovered for the benevolence than the one chosen. The best method of helping people is to enable them to help themselves, and to train boys who would otherwise grow up in the streets of our cities in vice and idleness to become honest and self-sustaining citizens is a most effective means of promoting morality and thrift.

A similarly valuable institution would be one that by competent training should give the power of self-support to girls. The beneficiaries in such an institution are given a fair chance in life. Many are doubtless hopelessly handicapped by the vices of heredity, but not so the majority.

The act of Mr. Williamson is one that makes every citizen prouder that he is an American. Wealth wisely directed in such channels as this becomes a potent factor in the solutions of the social problem that is causing so much uneasiness among thoughtful persons in this country.

GRAND LODGE

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

APRIL, 1889.

Notice of Dues.

OFFICE OF GRAND SECRETARY AND TREASURER }
TERRE HAUTE, IND., April 1, 1889. }

To Subordinate Lodges:

SIRS AND BROTHERS:—Notice is hereby given that the second quarter's dues under the new law is payable on or before May 1, 1889. The amount is regulated by each of the several Lodges, provided that it can in no case be less than five (\$5.00) dollars. This payment will be in full of local dues and Beneficiary Assessments for the quarter ending July 31, 1889. Any member failing or declining to make payment as above provided will stand expelled (said expulsion taking effect May 2d) and will be so reported by the Secretary to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. AND T.

Acknowledgments.

PHILADELPHIA, PA., February 21, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I herewith acknowledge the receipt of draft for \$1,500 through Benj. F. Pettit, the Receiver of United Lodge, No. 60, as payment in full for the amount due on the Beneficiary Certificate of my late husband, George C. Green. May God bless and prosper the Brotherhood and help them along in their good work is my wish.

Yours respectfully,

MRS. PHEBE A. GREEN.

ACTON, CANADA, February 8, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to acknowledge the receipt of fifteen hundred dollars (\$1,500) from the Receiver of Lodge No. 93, Mr. Wallbaum, being the full amount on the policy held by my late

brother, Thomas F. Lee. With many thanks I wish the Brotherhood of Locomotive Firemen every possible success in their undertakings.

Yours, very respectfully,

JULIA LEE.

LA CROSSE, WIS., January 27, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—It is with feelings of gratitude I acknowledge the receipt and payment of my disability claim by draft for \$1,500.00, the amount of insurance, on the 4th inst. I also desire to tender thanks to the officers and members of Lodge No. 168, for their care and kind attendance to me while confined with my injury. Wishing you all good luck and the best of success in all your undertakings, I remain

Yours fraternally,

H. V. SCHNEIDER.

BARRE, MASS., March 2, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire through your Magazine to offer my sincere thanks for a draft of \$1,500, the amount of insurance held by my son, Martin Higgins, from Troy City Lodge, No. 315, of which he was a member. And especially to Mr. Williams and Mr. Spafford, of No. 315, do I wish to return my heartfelt thanks, for the kind manner in which it was settled so promptly; also for their kindness at the time of the death of my son. With best wishes for the prosperity of the Brotherhood I remain,

Very sincerely yours,

MRS. SABINA HIGGINS.

OTTAWA, CAN., January 15, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—It is with sincere thanks that I acknowledge the receipt of a draft for \$1,500 for the policy held by my son, Wm. Arris. It was presented to me by the Receiver, H. Handyside, who is so prompt in his duties as an officer. And my heartfelt thanks are tendered to F. G. Lawrence Lodge, No. 172, for their many acts of kindness to their late Brother and to me in my time of affliction and sorrow, and for the respectful manner in which they performed the last sad rites at the funeral. May God bless the Order and the band of noble-hearted members that sustain it, is my prayer.

Respectfully yours,

EDWARD ARRIS.

SUNBURY, PA., February 20, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I have received from C. C. Bowen, Receiver of Provident Lodge, No. 220, a draft for the sum of \$1,500, the full amount due me on the Beneficiary Certificate held by my late husband, Absalom Grubb. Please accept my sincere thanks, which are extended especially to the members of Provident Lodge, No. 220, for the kindness shown me in my sorrow and affliction. Their kindness will ever be remembered. May God bless each and every one of you, and may the Brotherhood prosper and be to others as it has truly been to me, a friend to the widow and fatherless.

Very respectfully,

MRS. ABSALOM GRUBB.

PHILLIPSBURG, KAN., February 14, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—Through Brother J. C. Bowman, Receiver of Morning Star Lodge, No. 88, I have this day received a draft for fifteen hundred dollars (\$1,500) due me on my disability claim. In accepting it, allow me return my most heartfelt thanks to the Brotherhood, collectively and individually, and to the members of No. 88 in particular; also, to Brother Eugene

V. Debs, who so kindly and promptly answered all my communications. May the blessings of heaven ever rest upon our noble Order and each of its member, is the prayer of

Your disabled brother,

J. J. LECAIN.

Unknown Addresses.

ALLEN HATHAWAY—Is requested to correspond with J. A. Richards, Master of Herald Lodge, No. 161, Burlington, Iowa.

FRANK ROUGEAN—When last heard from was in Ashland, Wis., and expected to go west as far as Montana. His relatives are extremely anxious to hear from him, and anyone knowing his whereabouts will please address his brother, W. H. Rougean, River du Loup Station, River du Loup, Quebec.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., March 1, 1888.

—TO THE—

M. C. LILLEY & CO.

COLUMBUS, OHIO,

Manufacturers of

**Military and Society Goods, Railroad
Caps and Uniforms.****PLEASE MENTION THIS MAGAZINE**

IMPORTANT TO RAILROAD FIREMEN. SOMETHING NEW.

Here is just the thing you have been looking for, something to save time and labor and make your engines clean and bright.

BAKER'S TRIPOLINE,

A powerful and Rapid Cleaner and Polisher of Metals (without Acid or Poison.)

ESPECIALLY adapted to **RAILROAD, MARINE, STATIONARY and FIRE ENGINE** work "hot or cold," **LARGE SIGNS, RAILINGS,** and all other finished metal work.

EXCEPT Headlights, Fine, Soft Metals, Light, Plated Work, Show Cases, Harness Mountings, Etc., for which the "Matchless Metal Polish" is recommended.

This polish is similar to the celebrated "**MATCHLESS**" (that we are supplying to all the leading Fire Departments and thousands of Marine, Railroad and Stationary Engineers throughout the United States and Canada,) only much stronger and a more rapid cleaner, holds better on hot work and is cheaper.

We want a good reliable fireman at every machine shop and round-house, to act as agent or get up Clubs for one dozen 1 pound boxes, which we will send on receipt of \$2.50. This is only one-half the price we retail them for. Will give exclusive sale in your locality if you push and introduce it. Some samples furnished free, with order, and if polish is not found to be exactly as represented, may be returned at our expense, and money refunded.

Address,

THE MATCHLESS METAL POLISH CO.,
88 Market St., Chicago.

N. B.—This Polish has already been adopted by a number of the large Railroad Companies and also been tested and highly endorsed by the United States Ordnance and Navy Departments.

**Lodges of the B. of L. F. wishing
to procure Regalias will save 20 to
50 per cent. by sending orders to**

L. T. F. ZAISER,

27 So. Meridian St.,

INDIANAPOLIS, IND.

Castner & Curran,

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York.

308 Walnut St., Philadelphia

70 Kilby St., Boston.

36 Main St., Norfolk, Va.

1 Fenchurch Avenue, London. England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

The Following Circular Speaks for Itself. TO WATCH DEALERS.

OFFICE OF
ROBBINS & APPLETON,
104 State Street. CHICAGO.

Our attention having been called to the numerous complaints of watches becoming unreliable as time-keepers through *Magnetic and Electric* influences, and as the causes thereof increase with the introduction of *Electric Plants and Appliances*, some means of protection is necessary.

It has been demonstrated by experimental and practical tests that the

ANTI-MAGNETIC SHIELD

will protect a watch from the detrimental effects of *Magnetism*, and also has the effect of steadying its rate, thereby enabling all watches to produce a better average of time, we therefore recommend the *ANTI-MAGNETIC SHIELD* to all Dealers in *Waltham Watches*.

Some of the most imminent dangers which are destructive to the time-keeping qualities of a watch, and therefore should be provided against, in order to obtain the best results, are *Electric Railways, Dynamos, Electric Light Plants, Electric Motors, Magnetic Belts, The Application of Electricity in Medical Treatment, Electric Brakes on Railways, Locomotive Electric Headlights, Electric Lighting of Cars*, and other disturbing conditions, which are constantly arising when least expected.

MEN IN RAILROAD EMPLOY, where the most accurate time is required, and where the disturbing influences mentioned above are most seriously felt and aggravated by the peculiar condition of *Railway Service*, should exercise *wisdom*, and have their watches protected by the *ANTI-MAGNETIC SHIELD*.

Yours Respectfully,

By **ROBBINS & APPLETON**, General Agents.

AMERICAN WALTHAM WATCH CO.

Anti-Magnetic Shield Cases for Sale by all Dealers.

Messrs. Giles, Bro. & Co.:

CLEVELAND, OHIO, July 22, 1887.

GENTLEMEN:—We are acquainted with the merits of the *GILES ANTI-MAGNETIC SHIELD* for watches, and believe it is a very valuable invention for protection of pocket time-pieces, and very desirable for railway service.

Yours Truly,

[Signed]

P. M. ARTHUR, G. C. E.
T. S. INGRAHAM, F. G. E.
H. C. HAYS, F. G. A. E.

Railroad Square Patent

VENTILATED DINNER PAIL.

BEST PAIL MADE.

We have many testimonials like the following:

ARKANSAS CITY, ARK., January 15, 1889.

Reardon & Ennis:

Dinner pail arrived all O. K., and would say that it is just the boss for engine men and those who take their dinner or lunch to work with them, and will recommend it to all the boys on the line, and hope they will get it from you

Respectfully

JOSEPH GREGORY, Engine 448.

Size of No. 2 Pail is 9½ in. long by 5½ in. wide by 9½ in. high when looked up. To introduce these Pails until further notice, we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents. Try one.

BETTER THAN GOLD!

Dimmick's Kidney and Bladder Cure.

EVERY RAILROAD MAN SHOULD HAVE IT.

SAMPLE NEW TESTIMONIALS.

Brotherhood Medical Company, Chicago, Ill.:

Hearing so much about "no cure, no pay," I got a bottle of your Kidney Medicine, November 20, 1888, of J. J. Orr, druggist, and have used only one bottle. Can say it has done more than I ever expected. I can cheerfully recommend it as the best medicine I ever used, and I have used many kinds for Kidney and rheumatics troubles.

I am yours,

FRED P. DEUEL.

TECUMSEH, MICH., December 20, 1888.

Brotherhood Medical Co., Chicago:

DANVILLE, ILL., February 9, 1889.

It was generally known I had kidney difficulty for twenty years, and never found relief until I used "Dimmick's Kidney and Bladder Cure," recommended by an Engineer who had used it. Its use cured me so effectually that I can now use the shovel all day without trouble.

Yours, &c., H. B. STEWART, Mechanic, C. & E. I. Shops.

THE PREVENTION OF RAILROAD STRIKES.

Mr. Charles Francis Adams, has, in *Scribner's Magazine*, for April, a paper bearing the above caption, "The Prevention of Railroad Strikes." The article was written in 1886—but for "various criticisms" of "leading officials directly engaged in the local management of the lines operated by the Union Pacific Railway Company," of which the writer was president, the article, which now appears in *Scribner's Magazine*, was withheld from publication, these "leading officials," believing at that time its publication would "result in more harm than good." For reasons justifying the publication of the article now, we quote Mr. Adams as follows:

"Nearly three years have elapsed, and the events of the year 1888—with the strike of engineers on the Chicago, Burlington & Quincy—seem to indicate that the relation of railroad employes to the railroad compa-

nies have undergone no material change since the year 1886, when the strike on the Missouri Pacific took place. The unsatisfactory condition of affairs apparently continues. There is deep-seated trouble somewhere. No sufficient reason, therefore, exists for longer suppressing this paper."

"The paper," says Mr. Adams, "is printed as it was prepared," and the writer feels confident that if its publication now "does no good," it "will certainly do no harm."

We conclude that Mr. Adams is entirely familiar with the strike in 1888 on the Chicago, Burlington & Quincy—quite as well known as the "C., B. & Q.," or, the "Q.," or, the "Burlington." We conclude that whether Mr. Adams has, or has not, made himself familiar with the "grievances" of the engineers and firemen which led to the strike, he is entirely familiar with the financial disasters which the strike brought upon that blind and bigoted, unjust and autocratic corporation, representing many millions of dollars, which if they have not bankrupted the road, have crippled it to such an extent as to create widespread alarm among railroad corporations; for, says Mr. Adams, "there is deep-seated trouble somewhere," and this "deep-seated trouble" he is convinced, is as "deep-seated" now as it was in 1886, when he gave the subject of strikes his best thought. Manifestly, Mr. Adams has thought profoundly upon the subject since June, 1886, but he has not in any sense changed his views, and has neither

modified nor strengthened his arguments. He permits them to stand as they were about three years ago.

Mr. Adams ranks as one of the most advanced thinkers of the times. He is a man of education, of high character, and his words have great weight, not only in railroad circles, among railroad officials, but in financial and political circles as well, and we do not doubt that his paper will have an unusually wide reading and a marked influence upon men who control great railroad enterprises, and it is because of such considerations, that we give his paper special notice.

Mr. Adams starts out with some statistics relating to railroads, the growth in mileage during the past fifty years. He refers to the management, the changes that have occurred as the mileage increased, but after all, he discovers serious defects in the "organized system" which "had to grow up," and because of such "defects" "trouble ensued." It is not contended that great advancement has been made, but he says, "no rationally organized railroad service"—that is, no service in which the employer and employed occupy definite relations toward each other, recognized by each and by the body politic—no such service exists, and the purpose Mr. Adams has in view is to outline such a service, and, if possible, have it adopted.

It is of supreme consequence that railroad employes should have a definite understanding of what Mr. Adams means, by a "rationally organized railroad service." Who does he desire to organize? That our readers may have a clear comprehension of the views of Mr. Adams upon this important point, we quote a few paragraphs from his paper.

In the operating department of the Union Pacific at the present time (1886) about 14,000 names are carried upon the pay-roll. The number varies according to the season of the year and the pressure of traffic. In January, and during the winter months, the average will fall to 12,000, while in June and during the summer it rises to 14,000.

Of these, 2,800, or 20 per cent., are engaged in train movement; 4,200, or 30 per cent., are in the machine-shops and in charge of motive power and rolling stock; 7,000, or 50 per cent., are employed in various miscellaneous ways as flagmen, section hands, station agents, switchmen, etc.

So far as the wage-earner is concerned, it is, therefore, this portion of the force of a railroad company which may be called distinctively the service.

It will be observed that it is these 14,000 men, or 12,000 men, whom Mr. Adams desires to organize, they belong to the "operating department" of the company, and Mr. Adams does not hesitate to say that they are of more importance to the road than any other class of employes. Mr. Adams says, "the clerks in the financial department, or the engineers in the construction department, might leave the company's employ in a body and their places could be soon filled, but should they do so, the public would experience no inconvenience. It is not so with the operating department. So far as the community is concerned, whatever difficulties arise in the working of railroads develop themselves here. All serious railroad strikes take place among those engaged in the shops, on the track, or in handling trains."

It is not in a spirit of boasting that we say, that this *Magazine*, has with such ability as it could command, sought to impress upon railroad employes, especially those engaged in the moving of trains, the dignity and the importance of their positions as working men, and now comes Mr. Charles Francis Adams, and what he says upon the subject, not only vindicates the justice of the *Magazine's* utterances and conclusions, but adds his irrefutable testimony in support of our position in such matters, he says:

It is usually maintained that only the ordinary relation of employer and employed, should exist between the railroad company and the men engaged in operating its road. If the farmer is dissatisfied with his hands, he can dismiss them. In like manner, if the laborer is dissatisfied with the farmer, he can leave his employ. It is argued that exactly the same relation should exist between the great railroad corporation and the tens of thousands of men in its operating department. The proposition is not tenable. The circumstances are different. In the first place, it is of no practical consequence to the community whether difficulties which prevent the work of the farm from going on arise, or do not arise, between an individual farmer and his laborers. The work of innumerable other farms goes on all the same, and it is a matter of indifference what occurs in the management of the particular farm. So it is even with large factories, machine-shops, in fact with all industrial concerns which do not perform immediate public functions. A railroad company does perform immediate public functions. The community depends upon it for the daily and necessary movements of civilized existence. This fact has to be recognized. For a railroad to pause in its operation implies paralysis to the community which it serves. Such being the fact, it is futile to argue that the ordinary relations of employer and employed should obtain in the railroad service.

The absolute justice of the conclusion of

Mr. Charles Frances Adams, President of the Union Pacific Railroad Company, will not be seriously controverted. His estimate of employes in the operating department must stand unchallenged. These employes, in harmonious relation with the corporation, all is well—in antagonism, calamities follow. To bring about relations of amity is what Mr. Adams desires. What is the programme? What does Mr. Adams propose? In the first place Mr. Adams would divide the men engaged in the operating department of a railroad into two classes—first, "permanent service," and second, "temporary service." On the Union Pacific in 1886, these classes would have represented 12,000 in the permanent service, and 2,000 in the temporary service. The idea is for the company to form an alliance with those in its "permanent service." "The permanent service of a great railroad company," says Mr. Adams, "should in many essential respects be very much like a national service, that of the army or navy, for instance, except in one particular," every man is to have the right to "leave it" when he pleases, but the service should be so agreeable, should hold out such inducements that a man once in it, would want to remain, and "feel that his interests were, to a large extent, identified with those of the company." It is suggested that the pay of those in the "permanent service" should be advanced as often as once in five years, and that a tribunal should be established where a man in the "permanent service" could be heard, and that a fund should be created by assessments upon the employe and the company, to pay benefits in case of sickness, disability or death, and the organization contemplates still more—it contemplates providing "a stock of men" for operating railroads from the children of the "permanent class" of employes. Mr. Adams says:

When a boy—the son of an employe—grows up always looking forward to entering the company's service, he becomes to the company very much what a cadet at West Point or Annapolis is to the army or navy of the United States; the idea of loyalty to the company and of pride in its service grows up with him.

By this time the scheme outlined by Mr. Adams becomes vividly apparent. It is nothing more or less than to create a class of workmen who, under certain regulations,

are to regard themselves as under obligations to the corporation similar to those under which men enter the army and navy of the nation, they are to cultivate "loyalty to the company." This organization of the "permanent service" furthermore contemplates the establishment of corporation schools, and, says Mr. Adams, "the children of employes would naturally go into these schools, and the best of them would at the proper age be sent out upon the road to take their places in the shops, on the track or at the brake." This is a pretty clear statement that when this "permanent service" organization is perfected the corporation will take control, not only of the employe, but of his children, to provide a "stock of men" for the road.

No unjust inferences should be drawn from the utterances of Mr. Adams. He sees clearly that wrongs exist in the management of railroads. He does not intimate that strikers have been in the wrong. He does not glorify the corporation. He thinks that strikes are largely owing to defective management, and this he would remedy. We object to his methods. If they could be carried out they would effectually destroy the organizations of railroad employes, and that this is what Mr. Adams desires lurks in every sentence of his paper. He builds an attractive palace and he invites the 12,000 men in the "permanent service" of the Union Pacific into it, and once in, "loyalty to the company and of pride in its service" destroys the brotherhood. No divided allegiance will be tolerated. This done, the "great railroad company" would have its permanent "stock of men" who "would naturally feel that their interests were to a large extent identified with those of the company." They would look to the company "for hospital service, retiring pensions, sick pensions and insurance against accident and death." The things that the brotherhood does would be done, if done at all, by the corporation. The men in the "permanent service" of the company would become mere automatons, and the West Point and Annapolis regulations would take effect. The corporation school would educate the boys of employes, and at the proper age they would be sent out upon the road "to take such places as might

be assigned them without consulting parents. When workingmen make such concessions they yield up some of the most important prerogatives of citizenship. Would they revolt in case the corporation would like to have a law enacted or a law repealed? It is not probable, for under the organization which Mr. Adams proposes he thinks the man "enrolled in the permanent service would naturally feel that his interests were to a large extent identified with those of the company."

It should be remembered that far in advance of any suggestion of railroad companies to better the condition of employes the employes themselves had begun and carried forward the work until it had won universal approval. The brotherhoods looked after the moral, intellectual and financial welfare of their members. They *improved the service*, and this they have done in the face of the fierce opposition of the companies, and now, wherever brotherhood men are employed, the service is efficient.

The plan proposed by Mr. Adams means the obliteration of railway employes' organizations. He does not say that, he is too much of a diplomat to show his hand. The purpose is to have the employe a part of the great machine, men bound to it by ties that will hold them in defiance of sentiments of liberty, of independence and of self-respect, because the company, having devised a scheme of what is called "pensions," believes that the money consideration will prove stronger than all others, and when once the organizations of railway employes are destroyed, their triumph will be complete and army and navy regulations can be introduced for their government with impunity.

The Pennsylvania, the Baltimore & Ohio, and last the C., B. & Q. systems have inaugurated schemes designed to destroy the brotherhoods of railroad employes. The scheme proposed by Mr. Adams to prevent "railroad strikes" is of the same class, somewhat enlarged, but having in view the same end, the abolition of railroad organizations. In every case the pill the employe is to swallow is artistically sugar-coated—but once swallowed, all allegiance to the brotherhood will be renounced, the corporation will take its place. The will of the corporation will

be the supreme law. The glove on the iron hand will be removed. True, the employe may leave the corporation, quit its "permanent service" for "temporary service," or no service at all, but with the brotherhood gone he will realize that nothing in a land where men are born free and independent compensates for the loss of such blessings.

In the days of workingmen's necessities they organized brotherhoods, associations, etc., and like the mountains of the Switzer, they are their defense. To surrender them has a significance that no honorable working man can contemplate without experiencing humiliation. Possibly, aye possibly, these castles of workingmen may be beaten down by superior force. The right has often been cloven down. If such a calamity should come, in spite of Spartan resistance, workingmen will have to submit, but to yield to the siren song of the corporation "spider" would be such degradation as to defy hyperbole.

There is but one way for railway employes to pursue if they would maintain their independence and secure their rights, and that is to stand by their organizations and yield no one right nor prerogative. Demand simple justice and nothing more, and work together until justice is secured.

Mr. Adams places beyond all controversy the fact of the indispensability of employes in the operating department of a railroad company. They are the one supreme necessity—without them there is chaos, with them there is activity, order, earnings, dividends. Such being true, railroad companies can afford to deal justly by their employes in the operating department. To do this there need to be neither red tape nor circumlocution. Fair, honest dealing does not require complicated machinery. The corporation is not required to institute any side organizations for the purpose of controlling its employes or for supervising their affairs. All that is required of a corporation by its employes is fair treatment, just wages—all the talk about "loyalty" to the corporation is out of place. The employe, if he be a man, will not tolerate corporation paternalism. He will permit no man nor set of men to supervise his personal, private, or family affairs. He will educate his children to become citizens, not railroad

"cadets" to be sent at a "proper age out upon the road."

Mr. Adams, for "the prevention of railroad strikes," would have a workingman's organization within the corporation, a part of its machinery. If his plan succeeds away goes the brotherhood, and the corporation would be supreme. There is a much more direct way to prevent strikes. If the corporation will decree to have competent, honest men for superintendents, master mechanics, etc., and will further decree to pay fair wages for an honest day's work of reasonable hours, there will never be another strike on any railroad while the stars shine. The problem will be solved. Workingmen are not to be deceived. The railroad employé need not be told by Mr. Adams that he is quite as important to the railroad as its president. If the road is operated the employé, not the president, must operate it. So important a personage should remain independent of the corporation—that is to say, no bond between the employé and corporation should exist except that which stipulates an honest day's work for fair, honest wages and such treatment as one freeman has a right to demand from another freeman, and any direct or covert attempt to strike down labor organizations should be met by intelligent and determined resistance.

"It is a noticeable fact," says the *Denver Patriot*, "that the greatest corporations pay the least money to employés for their labor. A little railroad company with two or three hundred miles usually pays fair prices. But as soon as the little affair is absorbed by the giant of the corporations, down go the wages. The short line continues to pay the same profits and dividends but the new management decides the question of wages." This is not only true of railroad corporations, but of all other corporations. Capital combines to reduce wages, and it is this fact that creates what is termed the "conflict between labor and capital." It is rather a conflict between labor and capitalists. The distinction is as broad as heaven and hell.

Messrs. WILLIAM ARROL & Co., of Glasgow, are making a bridge to span the Hawkesbury River, Sydney, New South Wales, the length of which is 2,800 feet.

RAILROAD LAW (?).

Railroad employés are profoundly interested in railroad laws. In every State of the Republic railroad employés should federate for the purpose of electing men to the Legislature pledged to remedy the vicious practices of courts in deciding cases against what ought to be the unquestioned rights of employés or their heirs. Take for instance the following case:

In Kentucky, in an action against a railroad for the willful, negligent killing of a brakeman in the employ of the company, it was shown that the immediate cause of the accident was the formation during the trip of sleet or ice on the edge of the car, where deceased was compelled to stand while handling the brake, and that no salt or sand with which to remove it had been furnished by the company. The Court of Appeals rule that there is no case against the company.

Here it is shown why the brakeman lost his life. It is to be inferred, if the railroad company had furnished the brakeman "salt or sand" the fatal accident would not have happened. Hence, it is rational to conclude death resulted from the negligence of the company. Still, the Kentucky court held that no responsibility attached to the company. Kentucky, manifestly, needs a statute that shall protect railroad employés, and we assert if every employé in the State will federate for the purpose of having such a law passed, that it can be done, since it may be assumed that every workingman in the State would aid in bringing about the needed change. The "fellow servant" dodge, by which railroad corporations escape penalties should be swept from the statute books, for in a vast majority of cases it can be pleaded, and in every case, whether true or false, is vicious, since it is out of the power of one employé to dictate who shall be his co-employé, or, as the courts put it, his "fellow servant". When railroads kill cattle, hogs, horses, sheep and geese, they pay, but when men are killed or maimed they hide behind every possible subterfuge. They use money freely; they employ the highest legal talent; they demur and appeal, and finally, it is well understood that courts are human. What is wanted is clean cut statutes, which admit of neither dodge nor debauchery. It is a vital question.

Pittsburg Chronicle:—The wind now whistling through the cornfields has a husky tone.

JAY GOULD.

It is no part of our mission in the world, in so far as we are capable of comprehending the somewhat occult question of missions, to write panegyrics of Jay Gould. He belongs to a family or a tribe of millionaires whose history is never referred to by divines to illustrate prophecy relating to the millennium, when the devil is to be chained a thousand years, and when, if the world can credit apocalyptic scripture, monopolists, stock waterers, food cornerers and bucket-shop gamblers generally will be required to take back seats. But the question arises: Is Jay Gould the chief of sinners in his line? Is he a victim of total depravity? Is he without a parallel? Is he *suigeneris*? Is he like vice—

A monster of so frightful mein
As to be hated, needs but to be seen?
